REPORT OF THE CHIEF CONTROLLER OF CHINESE IMMIGRATION, A. L. JOLLIFFE

The head tax of \$50 imposed upon Chinese in 1885, which was increased to \$100 on January, 1901, and to \$500 on January 1, 1904, was abolished under the provisions of the Chinese Immigration Act, 1923. Under the provisions of the present Act the entry to Canada of persons of Chinese origin, or descent, is confined to members of the following classes:—

- (a) Members of the diplomatic corps, or other government representatives, their suites and their servants, and consuls and consular agents;
- (b) Children born in Canada of parents of Chinese race or descent, who have left Canada for educational or other purposes, on substantiating their identity to the satisfaction of the controller at the port or place where they seek to enter on their return;
- (c) (1) Merchants as defined by such regulations as the minister may prescribe; (2) Students coming to Canada for the purpose of attending, and while in actual attendance, at any Canadian university or college authorized by statute or charter to confer degrees.

During the fiscal year 1929-30 no Chinese immigrants were admitted to Canada. One student coming to attend a Canadian university, who will return to China when his studies have been completed, was admitted as a non-immigrant. Three Chinese were deported during this period under various provisions of the Act.

Permits were issued under section 9 authorizing the temporary admission for periods up to one year, of 80 Chinese, consisting mainly of actors and actresses under contract to appear in the different Chinese theatres, amahs, and servants of tourists, missionaries, students and teachers. Of this number, 48 have left Canada within the year. In the case of actors, amahs, servants and teachers, cash or guarantee bonds are required by the department, guaranteeing that they will engage in no other wage earning occupation and that they will leave Canada within the period of their permit.

Five thousand six hundred and eighty-two Chinese registered out during the present year, as provided for in sections 23 and 25 in the case of Chinese leaving Canada with the declared intention of returning. This registration, for which a \$2 fee is charged, entitles the registrant to re-entry within two years. The number of Chinese registered out who have allowed their registrations to lapse, thereby forfeiting the right of readmission, is increasing.

During the fiscal year under review administrative fines were collected in eleven cases under section 19, and in three cases under section 31 of the Chinese Immigration Act. During this period the tax provided in section 27 of the Act was paid by seven Chinese and a bond of \$1,000 was also estreated.

For the purpose of comparison the following table relating to Chinese Immigration is given:—

	Exemptions	Paying tax	Percentage of total arrivals admitted exempt	Registered for leave	Total Revenue

REPORT OF COMMISSIONER OF COLONIZATION, W. R. LITTLE

BRITISH IMMIGRATION

EMPIRE SETTLEMENT

Assisted Passage Agreements.

The Assisted Passage Agreement of January 1, 1929, a summary of which appeared in the report of the last fiscal year, expired on December 31, 1929, being replaced by a similar Agreement dated December 28, 1929. The rates payable by assisted migrants remained the same as provided by the previous Agreement.

During the fiscal year ended March 31, 1930, five distinct classes of British migrants were eligible for passage assistance on nomination either by British Subjects resident in Canada or the accredited representatives of the Department. The groups or classes of migrants thus eligible were as follows:—

1. Families for settlement under approved farm settlement schemes, such as the New Brunswick Land Settlement Scheme;
2. Families for placement in farm employment either under direct nomination from Canada or under placement arrangements of the department, provincial governments, or organizations approved by the department;
3. Wives and dependent children under 17 under the scheme for the Re-Union of Families. No applications under this scheme were accepted, however, after the close of the calendar year 1929.
4. Houseworkers;
5. Juvenile migrants.

Families for Farm Settlement.

Five hundred and twenty-two families, comprising a total of 2,908 souls, arrived during the fiscal year under approved farm settlement schemes. This total included 306 under the 3,000 Family Scheme which was concluded during the year. During the same period 96 families were settled under the New Brunswick Family Settlement Scheme and 120 families under the Scheme of the Canadian Pacific Railway and the Hudson's Bay Oversea Settlement Limited.

Families for Placement in Farm Employment.

Three hundred and sixty-nine families came to Canada under direct nomination by British subjects resident in Canada who offered them farm employment under conditions inspected and approved by the department.

Seven hundred and eighty-six families received assisted passages on the nomination of the overseas representatives of the department and came to Canada for farm placement.

Under the Family Re-Union Scheme 380 wives (accompanied by their children under 17 years of age) were enabled to join their husbands in Canada.

Juvenile Immigration.

The scheme of provincial reception and distributing farms for British boys has been explained in previous reports. The movement under this scheme continued during the year, a total of 2,309 boys having been brought forward under the various agreements. Particulars of the movement of juveniles under the auspices of approved societies will be found in the report of the Supervisor of Juvenile Immigration.

Empire Settlement Statistics.

A statistical statement of Empire Settlement migration is embodied in the report of the Acting Director of European Emigration.

Agricultural Trainees.

Almost the whole movement of agricultural trainees took place in the early months of the fiscal year when 3,257 young men, after receiving instruction at Government training farms in Great Britain and Northern Ireland, proceeded to Canada and were placed in farm employment. About 50 per cent of the total were placed in the province of Ontario under the supervision of Mr. George A. Elliott, Provincial Director of Colonization, Toronto, and the balance, with the exception of small groups placed in the Eastern Townships of the province of Quebec through the Eastern Townships Immigration Society, and in Prince Edward Island by the provincial authorities, were placed in the Prairie Provinces under the direction of the Division Commissioner of the Department at Winnipeg, assisted by the Field Organization of the Land Settlement Branch.

These trainees were not Empire Settlement passengers and no contribution was made by Canada towards their transportation.

THE UNITED STATES FIELD

The office at Indianapolis was closed and the agent transferred to our Information Bureau in Chicago. The area formerly covered by the Canadian Government Information Bureau at Indianapolis will now be under the jurisdiction of the agent at Chicago.

Canadian agricultural products were displayed at fifty-one exhibitions. It is estimated that the attendance at these exhibitions was approximately 6,500,000.

Monthly reports received from our various offices show that many of the settlers from the United States had substantial capital and were experienced agriculturists.

STATISTICS compiled from the Monthly Reports received from each Canadian Government Information Bureau in the United States during the fiscal year ended March 31, 1929.

REPORT OF THE ASSISTANT DIRECTOR OF EMIGRATION FOR CANADA IN EUROPE, ANDREW O'KELLY

Migrants eligible for the reduced rate under the Assisted Passage Agreement may be classified as follows:—

- Selected families for farm settlement.
- Selected families for farm placement.
- Houseworkers.
- Juveniles.

District agents are now recruiting families for settlement under the New Brunswick Family Settlement Scheme, and reports indicate that it will be possible to obtain the quota of one hundred families of a suitable type for settlement in New Brunswick.

District agents are also engaged in the work of interviewing and selecting agricultural families for placement under the various organizations.

The requirements of provincial Governments participating in the Boys' Reception and Distributing Farms were completed during April and May, 1929. The quotas of British boys fixed by provincial Governments for placement through provincial centres during the spring of 1930 were received during the fall of 1929, and in sufficient time to make the necessary arrangements for the selection of a good type of boy. Substantial progress has already been made in completing the provincial quotas, and parties have already sailed to New Brunswick, Manitoba, Saskatchewan, and British Columbia.

Our district agents are co-operating closely with the educational authorities throughout the United Kingdom, and we do not anticipate any difficulty in meeting the requirements of the provinces for this type of migrant. Successful settlement is the most effective medium for the recruitment of a good type of British boy.

The new British Boy film was received somewhat late in the spring but was displayed with good results. Our district agents have already established contact with educational and other organizations for the effective display of these films, and arrangements will be made early in the summer for the allocation of these films to the various districts during periods when the agent considers that this form of propaganda will be most effective.

The following is a summary of the work of the department in the British Isles and the Continent of Europe:—

ADVERTISING

Advertisements were inserted in 459 papers, mainly newspapers and journals circulated in agricultural areas. The advertisements were changed from time to time to suit requirements, e.g., New Brunswick Family Settlement Scheme, Provincial Juvenile Schemes and houseworkers. The total sum expended in advertising was £8,855.7.1.

EXHIBITIONS

The department was represented at 105 agricultural shows in the British Isles. The figures show that 1,265,263 visitors attended these Shows where our agents distributed 230,940 pamphlets. The total sum expended on exhibitions was £1,009.12.8.

FILMS

Four new films were received in January, February and March. Two of these films, "Boy Farmers" and "Canadian Champion Ploughmen" were used to some advantage in the early spring.

LANTERN SLIDES

The sets of lantern slides on hand have been revised and brought up to date. There was a good demand for lantern slides and the various sets have been displayed on 1,426 occasions.

LECTURES

Our agents gave 291 lectures during the last three months of the calendar year and a few lectures in the spring of 1930. Some of these lectures were given in the higher grade schools and academics for the purpose of interesting British boys in land settlement. The expenditure on lectures was £1,641.5.7.

LITERATURE

The total number of pamphlets distributed was 817,799. The new pamphlet "Boy Settlement in Canada" has been effectively used in recruiting British boys for the various provincial schemes and there has also been a considerable demand for "Farm Opportunities in Canada". Out of this total about 35,000 pieces were requisitioned by the Exhibition Commissioner, and were used by him at Trade and Commerce Exhibitions, such as the British Industries Fair, London and Birmingham, the Ideal Homes Exhibition in London and Empire Week and Empire goods displays; also at the Apple Show organized by the Fruit Commissioner.

MOTOR EXHIBITION CAR

The motor exhibition car covered 7,498 miles and visited 773 towns and villages, 574 schools, 46 markets and participated in 13 Empire street pageants. Through the medium of the motor car 52,430 pamphlets were distributed at schools and in rural areas. The cost of the operation of the exhibition motor car was £477.8.7.

OFFICIAL NEWS BUREAU

The press of the United Kingdom was kept informed of successful settlement through the medium of articles, paragraphs and photographs. The whole tenor of this publicity was carefully adapted to meet the requirements of the various provinces. The insertion was secured of well over 4,000 paragraphs and articles. Close and constant touch was maintained with individuals and organizations whose activities had a bearing on Canadian interests. To an increasing extent throughout the year the bureau had been made use of by the national newspapers who appreciate the existence of facilities for prompt and reliable information.

CORRESPONDENCE

The number of letters received at the London Office this year was 205,137. The total despatched was 155,871.

The number of letters received by all agents in the British Isles was 241,456, and the total sent out by our provincial agents amounted to 276,220, making for the United Kingdom a total of 446,593 received, and 432,091 mailed.

The total number of callers at all offices in the British Isles amounted to 93,063.

BRITISH FAMILY SETTLEMENT SCHEME

Warrants have been issued to cover 306 families for settlement under the 3,000 Family Scheme. These families comprised 1,583 souls. The above movement finally completes what is known as "The British Family Settlement Scheme".

NEW BRUNSWICK FAMILY SETTLEMENT SCHEME

Warrants have been issued to cover 96 families who were selected for the New Brunswick Family Settlement Scheme. These 96 families comprise 650 souls. The New Brunswick Agreement is dated August 4, 1927, and provides for the settlement of 500 families within a period of six years. Altogether 199 families have arrived. There are still 301 families to be settled under this Scheme.

TRAINING CENTRES

The Oversea Settlement Committee have provided facilities for the preliminary testing and training of intending settlers. During the year the following training centres were in operation:—

Single Men (Agricultural Training).—Claydon, near Ipswich, which was opened in September, 1925 and Brandon, Suffolk, which was opened in February, 1926. Additional centres have been established at Carstairs, Lanarkshire and at Richhill in Northern Ireland. The Army Training Centre at Catterick which has been removed to Chiseldon, has also been made available for training civilians. Single men were also trained at the Hudson's Bay Company's farm at Brogborough Park, Bedfordshire and at the Church of Scotland Farm at Cornton Vale near Stirling.

Boys (Agricultural Training).—Farm training centres for boys have also been established under the auspices of local Migration Committees at Newcastle, Liverpool, Hull and Bristol. Boys were also trained at the Salvation Army's Training Farm at Hadleigh, Essex; The Church Army's Training Farm at Hempstead, Essex; Dr. Cossar's Farm at Craigielinn, near Paisley, and also by various charitable societies.

Women (Household Work).—Hostels for the training of houseworkers are being operated under the auspices of various organizations in Cardiff, Newcastle, Glasgow and London. The training centre at Market Harborough is

also now in use as a training centre for women for Canada and the other Dominions. This centre is under the auspices of the Society for the Oversea Settlement of British Women.

Families.—Families selected by the British Legion are also being trained at the Army Vocational Training Centre at Chiseldon for settlement on the land in Canada.

CONTINENTAL EUROPE

Continental immigrants are examined at Antwerp, Paris, Rotterdam, Hamburg and Danzig. The office at Riga was closed on September 30, 1929.

SYNOPSIS OF SPECIAL GROUPS

Railways Agreement.—The number of immigrants moved under the Railways Agreement was 27,148. This is a decrease of 16,555 as compared with the number of persons who migrated during the fiscal year 1928-29.

Canadian Mennonite Board.—The statistics show that 969 persons proceeded under the auspices of this organization during the past fiscal year.

Mennonite Emigration Aid Society.—The records indicate that some 142 persons were moved under the auspices of this Society.

Lutheran Immigration Board.—The number of persons proceeding through this Organization amounted to 1,689.

Canadian Lutheran Immigration Aid Society.—This society has been responsible for the movement of 968 persons.

Association of German Canadian Catholics.—During the past fiscal year 1,696 persons have proceeded to Canada under the auspices of this organization.

Catholic Immigration Aid Society.—The records show that 1,168 persons have gone forward under the auspices of this society.

German Baptist Board.—Some 176 persons are shown as having proceeded to Canada through this organization.

NOTE.—Some aliens were rejected on account of more than one statutory cause; consequently, the number of rejections will not correspond with the causes of rejections, e.g., one alien may have been rejected upon two grounds, namely—P.C. 182 and P.C. 183.

REPORT OF THE COMMISSIONER OF IMMIGRATION, A. L. JOLLIFFE

A summary of the immigration activities coming under the immediate supervision of the Commissioner of Immigration was given in the last annual report of the department. For those who have not access to that report it may be well to state that outside of Head office in Ottawa much of the field and other work of the branch functions through three division commissioners located at Ottawa, Winnipeg and Vancouver. Each division commissioner looks after the work within his own division.

The Eastern Division includes all that part of Canada east of Port Arthur. The commissioner for this division is J. S. Fraser, with headquarters at Ottawa.

The Western Division covers the territory lying between Port Arthur, Ont., on the east, and Kingsgate, B.C., on the west. The commissioner in charge of this district is Thomas Gelley, with headquarters at Winnipeg.

The Pacific Division embraces all that part of British Columbia lying west of Kingsgate, including the Pacific ocean ports. The commissioner in charge of this division is A. E. Skinner, with headquarters at Vancouver. Mr. Skinner also has charge of such inspectional work as is done at Seattle, Wash.

Immigration inspection at Atlantic and Pacific ports and on the international boundary together with the consideration of appeals of those rejected, occupies first place in the amount of work involved but this is followed at no great distance by a vast amount of follow up, investigational and other work arising out of complaints and difficulties of immigrants scattered throughout the Dominion. Those who have to do with the welfare of human beings will know something of the patience and skill required in dealing promptly and efficiently with the difficulties that arise. Each request for deportation involves an inquiry usually by a board of inquiry, the examination of evidence at Head office and also the consideration of an appeal. Whether or not an appeal is entered deportation never takes place without the evidence being considered at Head office.

The investigational work of the department is performed by officers specially selected and trained for the same. In addition to the staffs at the divisional headquarters and ocean ports, investigating officers are located at seven different centres throughout Canada, each covering a prescribed area. By this means the work is carried out expeditiously and economically over a vast territory.

In view of the increasing interest throughout Canada in the removal of immigrants by deportation it is perhaps well to describe briefly both "rejection" and "deportation".

The term "rejection" is defined in the Immigration Act as follows:—

"Rejected as applied to an immigrant or other person seeking to enter or land in Canada, means that such immigrant or other person has been examined by a board of inquiry or officer acting as such and has been refused permission to land in Canada."

The board of inquiry or the immigration officer acting as such is required by law to advise the rejected person of any right of appeal he may have to the minister, and if an appeal is entered to immediately forward the same without cost to the appellant, to the Head office of the department in Ottawa.

When rejection takes place at a Canadian ocean port the rejected person is detained in one of the immigration buildings erected for the examination and detention of immigrants and passengers. The cost of maintenance during detention falls not upon the appellant but upon the transportation company which brought him to Canada. When rejection occurs on the international boundary the person rejected is returned to United States territory to await the result of any appeal that may have been entered.

The term "deportation" is defined in the Immigration Act as follows:—

"Deportation means the removal under authority of this Act of any rejected immigrant or other person or of any immigrant or other person who has already been landed in Canada or who has entered or remains in Canada contrary to any provisions of this Act, from any place in Canada at which such immigrant or person is rejected or detained, to the place whence he came to Canada or to the country of his birth or citizenship."

When a person is seeking to enter or land in Canada the burden of proof rests upon such person but when deportation proceedings are instituted against any person already in Canada the burden of proof rests upon the department.

Deportation is brought about either because the person concerned was a prohibited immigrant at the time of entry to Canada, or became an undesirable after entry to Canada. Certain classes are by the Immigration Act defined as "prohibited". Included in these are the following:—

- (a) Idiots, imbeciles, feeble-minded persons, epileptics, insane persons and persons who have been insane at any time previously.
- (b) Persons afflicted with tuberculosis in any form or with any loathsome disease, or with a disease which is contagious or infectious or which may become dangerous to the public health.
- (c) Immigrants who are dumb, blind, or otherwise physically defective unless satisfactory guarantees are given.
- (d) Persons who have been convicted of, or admit having committed any crime involving moral turpitude.
- (e) Prostitutes, pimps and procurers.
- (f) Persons likely to become public charges.
- (g) Persons who believe in or advocate the overthrow of constituted law and authority, or who are affiliated with any organization teaching disbelief in, or opposition to organized government, etc.
- (h) Beggars, vagrants and charity-aided immigrants.
- (i) Illiterates. Exemption from the literacy test is provided for persons under fifteen years of age, for fathers or grandfathers over fifty-five, for wives, mothers, grandmothers and unmarried or widowed daughters.

If a person belonging to one of the prohibited classes succeeds in effecting entry to Canada, such person remains in the prohibited class, does not by residence in Canada acquire domicile within the meaning of the Immigration Act, and therefore may be deported even after more than five years of residence. Time spent by a person while confined in, or an inmate of a penitentiary, gaol, reformatory, prison or asylum for the insane is not counted in the period of residence in Canada that is necessary to acquire Canadian domicile.

When deportation is brought about for cause arising in Canada such cause with few exceptions must have arisen within five years after landing. Contrary to an opinion apparently widely held in Canada an immigration officer has very restricted powers of summary arrest and deportation; such powers are being limited to cases where the person concerned enters Canada contrary to regulations. In all other cases action looking towards deportation is based upon a written complaint to the Minister of Immigration that the person concerned is an undesirable within the meaning of the Immigration Act. The complaint may be made by the clerk, secretary, or other official of any municipality in Canada or by any officer cognizant of the facts. Upon receipt of the complaint an order of the minister is issued directing an examination and investigation into the facts by a board of inquiry or officer acting as such. A board of inquiry may be described as an immigration court set up under the Immigration Act, and the following provisions quoted from the Immigration Act describe the functions of a board of inquiry:—

“A board of inquiry shall have authority to determine whether an immigrant, passenger or other person seeking to enter or land in Canada or detained for any cause under this Act, shall be allowed to enter, land or remain in Canada or shall be rejected and deported.”

“The hearing of all cases brought before a board of inquiry shall be separate and apart from the public, but in the presence of the immigrant, passenger or other person concerned whenever practicable, and such immigrant, passenger or other person shall have the right to be represented by counsel whenever any evidence or testimony touching the case is received by the board, and a summary record of proceedings and of evidence and testimony taken shall be kept by the board.

“There shall be no appeal from the decision of such board of inquiry as to the rejection and deportation of immigrants, passengers or other persons seeking to land in Canada, when such decision is based upon a certificate of the examining medical officer to the effect that such immigrants, passengers or other persons are afflicted with any loathsome disease, or with a disease which may become dangerous to the public health, or that they

come within any of the following classes, namely, idiots, imbeciles, feeble-minded persons, epileptics and insane persons: Provided always that Canadian citizens and persons who have Canadian domicile shall be permitted to land in Canada as a matter of right.

"In all cases other than provided for in the last preceding section an appeal may be taken to the minister against the decision of any such board of inquiry or officer in charge by the immigrant, passenger or other person concerned in the case, if the appellant forthwith serves written notice of such appeal, which notice may be in the form D in schedule to this Act, upon the officer in charge or the officer in whose custody the appellant may be.

"Notice of appeal shall act as a stay of all proceedings until a final decision is rendered by the minister, and within forty-eight hours after the filing of the said notice a summary record of the case shall be forwarded by the immigration officer in charge to the deputy minister, accompanied by his views thereon in writing."

The opening up of highways and the increase in international boundary travel involves a great deal of inspectional work. The following figures show the immigrant and non-immigrant movement in each division during 1929-30:—

EASTERN DIVISION

Ocean Ports—	
Admissions as immigrants.....	131,242
Rejections.....	279
*Non-immigrants admitted.....	79,523
Investigations.....	4,974
Board of inquiry hearings.....	1,156
International Boundary—	
Admissions as immigrants.....	19,805
Rejections.....	23,328
Non-immigrants admitted.....	29,767,807
Investigations.....	21,971
Board of inquiry hearings.....	7,761

WESTERN DIVISION

Admissions as immigrants.....	8,052
Rejections.....	621
Non-immigrants admitted.....	1,048,395
Investigations.....	8,818
Board of inquiry hearings.....	2,049

PACIFIC DIVISION

Admissions as immigrants.....	4,189
Rejections.....	809
Non-immigrants admitted.....	1,510,181
Investigations.....	1,350
Board of inquiry hearings.....	389

All the division commissioners report a steadily increasing tourist movement across the international boundary and this increase is shown at almost every port of entry. The increase in the number of rejections is due in part to unemployment conditions existing in the United States and also to the operation of the Contract Labour regulation made on the 7th of August, 1929. This regulation prohibits the admission to Canada of any immigrants other than agriculturists and domestics, who come under any contract or agreement express or implied.

In last year's report Windsor, Ont., was named as the port through which the largest number of non-immigrants entered Canada. The total figure for that port being upwards of 8,000,000. During the year under review the number of non-immigrants entering Canada through the port of Windsor was approximately 9,200,000. Through the port of Niagara Falls the number reached almost 6,300,000, and the port of Bridgeburg, which includes Crystal Beach, Erie Beach and the Peace bridge, the number was almost as large.

The Eastern Division Commissioner has in his division 94 ports of entry with 270 full time and 173 part time inspectors. In reporting on the international boundary movement the Eastern Division Commissioner says:—

"Every effort has been made to keep up the efficiency of the work of the division. The port work has been made much heavier by the enormous increase in traffic during the past two years. It is essential that this traffic be handled as rapidly as possible, especially at the larger ports, in order to avoid congestion. Every effort has been made to promote the efficiency of the officers and to better the conditions under which they do their work.

* These include passengers destined to the United States.

We have received during the year fine co-operation from the various transportation companies, and I am glad to report that the very helpful co-operation between our officers and the officers of the Canadian Customs service continues unchanged."

In the Western Division the bulk of the work is not on the international boundary but in looking after immigrants at the time and following their arrival. In Winnipeg immigration halls are maintained. At other points in the Prairie Provinces, especially in the newer districts, smaller immigration halls are maintained. The Western Division Commissioner reports that in Winnipeg shelter was given to 21,311 immigrants, and in halls at other points a total of 7,977. The average stay in the Winnipeg halls was about four days. The Division Commissioner also reports the registration and placement of some 17,500 persons. Incoming mail to the Winnipeg office totalled 106,732, and outgoing mail 108,824 pieces. There was considerable activity in the Western Division during the year in the collection and preparation of exhibits used in the British Isles and the United States. A total of 1,613 boxes of threshed grain, grasses, vegetables, dairy products, etc., were prepared and sent out during the year in addition to 200 smaller boxes containing school exhibits asked for by schools in the United States.

The work in the Pacific Division differs materially from that of the Eastern and Western Divisions in that the ocean ports on the Pacific coast deal largely with migration from the Far East and approximately seventy per cent of the Oriental population of Canada resides in this division. The officers dealing with the problems arising from this situation are trained in this special class of work and a very detailed system of records is maintained for the purpose of properly administering the immigration laws governing this phase of the department's work.

The following figures taken from the census returns of 1921 show the number of immigrants, British and foreign, resident in each province of the Dominion at the time the census was taken, and also the period of immigration:—

	Total	British	Foreign	Immigrated	
				Before 1900	Since 1900
Prince Edward Island.....	2,365	1,074	1,291	843	1,522
Nova Scotia.....	43,505	29,519	13,986	8,654	34,851
New Brunswick.....	21,458	10,709	10,749	5,633	15,825
Quebec.....	188,576	89,864	98,712	35,598	152,978
Ontario.....	641,683	459,577	182,106	135,858	505,825
Manitoba.....	222,372	113,114	109,258	39,918	182,454
Saskatchewan.....	299,677	100,355	199,322	31,621	268,056
Alberta.....	273,364	99,392	173,972	25,472	247,892
British Columbia.....	260,536	160,752	99,784	48,226	212,310

The following statement shows the declared destination of immigrant arrivals in the fiscal years 1922-23 to 1929-30:—

	1929-30	1928-29	1927-28	1926-27	1925-26	1924-25	1923-24	1922-23
Nova Scotia.....	2,346	1,828	2,020	1,815	851	2,085	5,947	2,167
New Brunswick....	2,478	2,106	1,506	1,158	766	1,023	1,881	1,016
Prince Edward Island.....	126	129	215	152	53	45	112	115
Quebec.....	23,917	18,659	18,469	16,642	11,367	16,279	19,979	9,343
Ontario.....	59,974	47,656	45,052	40,604	29,293	45,912	65,280	30,444
Manitoba.....	39,132	57,651	43,596	36,739	19,079	11,772	21,451	6,037
Saskatchewan.....	11,003	14,789	15,331	20,085	13,816	14,041	13,200	8,186
Alberta.....	14,970	16,243	15,473	16,367	12,540	10,952	10,430	8,798
British Columbia..	9,252	8,627	9,891	10,376	8,165	9,222	10,233	6,652
Others.....	90	34	44	53	134	31	47	129

The above figures appear to show that Manitoba received a very much larger immigration than Saskatchewan or Alberta. This is only because Winnipeg is the principal distributing centre for the Prairie Provinces and many immigrants destined to Winnipeg did not settle in Manitoba, but subsequently went on to Saskatchewan and Alberta.

In the statistical section of the report a table will be found showing deportations over an extended period of years. The deportations of the past fiscal year were from the various provinces in the numbers indicated:—

Provinces	1929-30
Maritime Provinces.....	93
Quebec.....	480
Ontario.....	1,115
Manitoba.....	1,296
Saskatchewan.....	277
Alberta.....	396
British Columbia.....	306

In last year's report oversea inspection both medical and civil, was described. This inspection has continued throughout the year under review with the result that the number of rejections at Canadian ocean ports is insignificant in comparison with the number of rejections occurring on the international boundary.

REPORT OF THE DIRECTOR OF PUBLICITY ROBERT J. C. STEAD

During the fiscal year 1929-30 publicity work was carried on by the department mainly in the United Kingdom and the United States. The purpose of this publicity is to make known the settlement opportunities which exist in Canada. In doing so a much wider field than the subject might suggest is covered as it is felt that whatever brings Canada into favourable notice in the two countries mentioned and whatever promotes a better understanding of the Dominion is helpful to the work of the department. Advertising campaigns are conducted; booklets are printed and distributed by mail, by representatives of the department through their offices and at fairs at which they participate and in direct response to inquiries. Canadian news is distributed through a number of channels and is widely reprinted in the press of the United Kingdom and the United States, and to some extent in other countries. Special articles are prepared for magazines and newspapers. Photographs are supplied to distributing agencies and direct to publishers. Information on special topics not always related to colonization is assembled and supplied in response to requests. Inquiries touching on many phases of Canadian life and opportunities are received and answered. In short, all the work of a fully organized publicity office is handled from the headquarters in Ottawa, co-operating with a publicity office in London and with other publicity connections which have been found helpful in the work.

ADVERTISING

Advertising by the department is confined particularly to the British Isles and the United States. Unlike most Government departments, the Department of Immigration and Colonization has little occasion to publish advertisements in Canada, as its field is obviously outside of the Dominion. The advertising appropriation is therefore expended almost entirely on the two countries above stated.

In the British Isles the departmental advertising is placed through an advertising agency under the immediate supervision of the Director of European Emigration for Canada in London, and under the general supervision of head-

quarters at Ottawa. This advertising is limited mainly to brief statements in papers with rural circulation of the opportunities to be found by agriculturists in Canada. Some space is devoted to the field for houseworkers and to the special provision which has been made for British boy immigration. No extravagant hopes of sudden success or of elaborate government assistance are encouraged, the method being rather to make a brief statement of facts and let the reader decide for himself. This advertising is carried on almost exclusively in the winter and early spring months, which, for seasonal reasons, are found to be the most favourable for this purpose. Owing to the high cost of space no attempt is made to give detailed information concerning Canada in the advertisement, the purpose being to direct those who may be interested to the agencies of the department from which they may obtain literature describing the country in detail, and specific replies to any inquiries.

Advertising in the United States has in the past been practically limited to state and national farm journals published in that country. Advertisements were of the display character, occupying spaces of from five or six inches double column to one-half page and in some cases larger. Some advertising of this class was done during the year under review, but on account of changing conditions it was decided to employ classified advertising to a considerable extent during the winter months. This advertising consisted of a brief recital of what Canada has to offer followed by the name and address of the nearest Canadian Government representative. A system of keying enquiries was followed which resulted in accurate credit being given to each paper for the enquiries which it produced. The advertisement was run in most cases among other advertisements of farms for sale where it readily caught the eye of farmers intending to make a change in their location. Owing to the smaller cost of this class of advertising and also to a desire to reach a new field, it was decided to greatly enlarge the number of papers used, with the result that a considerable number of daily papers were employed. The result indicated that these daily papers in many cases produced very satisfactory returns, and the whole outcome of the campaign indicated that enquiries were of a better type and were received at much less cost than those obtained by means of display advertising. Results have been carefully tabulated for future guidance. The display advertising placed in the United States during the year was handled through a Canadian advertising agency but the classified advertising was handled direct by the Publicity Branch working in co-operation with the representatives of the department in the different fields covered. In addition to papers published in English, use was made of a number of papers published in French, and in the Scandinavian and German languages in the United States, as it has been found that the readers of these papers show a considerable interest in settlement opportunities in Canada and constitute a desirable type of settler.

The records of the department show that the total number of inquiries received by the agencies in the United States during the year was 27,711, which represents a small falling off from 28,316 received a year ago. In view of the fact that the advertising expenditure was greatly reduced and also the reports by agents that the type of inquiry was much improved this may be considered a satisfactory figure.

BOOKLETS AND PUBLICATIONS

The advertising of the department is supported by a series of booklets and publications which, as already intimated, give much more detailed information than is practicable in high-priced advertising space. The booklets are compiled and their production supervised by the Publicity Branch. Circulation is made mainly through the agencies of the department in the British Isles and the United States. The publications issued during the year are briefly reviewed hereunder.

The "Descriptive Atlas of Canada" is an 80-page booklet with maps of the Dominion and all of the provinces and much descriptive text matter, profusely illustrated from photographs. The booklet is issued for educational purposes in the British Isles and the United States. It is revised from year to year and is in large demand by schools and other educational institutions in both countries mentioned. An edition of 106,400 copies was printed for distribution in the United States and 104,750 copies for distribution in the British Isles.

In connection with the Boy Scout Jamboree in England a special booklet descriptive of Canada and dealing with the country in a manner of interest to Boy Scouts was compiled and produced, and, through the co-operation of the Canadian officials of the Boy Scout Association, was distributed at the Jamboree. Of this booklet 15,000 copies were issued.

"Boy Settlement in Canada" is a booklet outlining the plan under which the Canadian and British Governments co-operate with a number of provincial governments in settling British boys in those provinces. The booklet explains the plan fully and sets forth the conditions which British boys may expect to find in farm life in Canada. Twenty-nine thousand one hundred copies were printed for distribution in the British Isles.

"British Family Settlement in New Brunswick" is a booklet outlining the plan under which the Canadian Government and the British Government co-operate with the Government of New Brunswick for the settlement of British families in that province. The plan is explained and information given, supported by photographs showing the progress being made by settlers already established. Of this booklet 20,200 copies were issued for distribution in the British Isles.

An attractive departmental calendar for use mainly in the British Isles was issued and 79,150 copies were distributed.

"Canada 1930" is a booklet containing much statistical and other information concerning Canada's development. It was compiled by the Dominion Bureau of Statistics and a special edition was printed for departmental distribution. Distribution was made mainly to educationalists, newspaper offices and libraries in the British Isles and the United States. The quantity was 12,160 copies.

"Eastern Canada" is a 32-page booklet with lithographed covers containing maps of each of the five eastern provinces and much information about agricultural settlement opportunities and conditions, highly illustrated from photographs. An edition of 100,800 copies was completed and supplied for distribution in the British Isles. A similar booklet revised in such respects as are necessary for distribution in the United States was issued, 51,175 copies being provided for that purpose.

"Farm Opportunities in Canada" is a 32-page folder printed in two colours, containing much specific information about the different classes of farming carried on in this country. In this booklet provincial lines are not recognized but rather the division is between different types of farming. The booklet is comparatively inexpensive and is issued in large quantities for distribution among those who have not yet made up their minds in what part of Canada they wish to settle or what branch of farming they wish to follow. During the year a British edition of 209,950 copies was issued.

The "Houseworker in Canada" is a small booklet designed for the information of women and girls in the British Isles who contemplate coming to Canada to engage in housework. This booklet advises them as to immigration forms and regulations, the location of women's hostels in Canada and the regulations under which they may be used, the general nature of housework

required with average rates of compensation and other useful information. Two editions of the booklet were issued during the year, one consisting of 15,000 copies and one of 20,000 copies.

"Information for Settlers" is a leaflet for the convenience of intending settlers from the United States setting forth the customs regulations with respect to settlers' effects, quarantine regulations, homestead regulations, and similar information. An entirely revised edition was issued during the year, of which 15,000 copies were printed.

"Land Settlement—Canada—Where to Go for Advice" is a booklet containing the names and addresses of officials of the Dominion and Provincial Governments in Canada to whom a new settler may turn for advice concerning his settlement problems. The booklet was brought up-to-date and a new edition of 20,000 copies printed during the year.

The "Vest Pocket Booklet" is a convenient little publication of 32 pages containing a map of Canada and much information in question-and-answer form. It is distributed extensively at county fairs. An edition of 151,985 was printed for distribution in the British Isles and 154,275 for distribution in the United States.

A compilation was made of experiences of British settlers in Western Canada as related by them in a number of Canadian newspapers. This was published under the title "Winning Through," and 10,300 copies were printed for distribution in the British Isles.

In addition to the above publications completed during the year work was done on a number of others which were not completed and which, therefore, are not included in this report. These include: a new edition of the "Eastern Canada" booklet for distribution in the British Isles; a wall map of Canada for distribution in the British Isles and the United States; new editions of the Vest Pocket booklet for distribution in the British Isles and the United States; new editions of the "Canada West" booklet for distribution in the British Isles and the United States; editions in English, French, Flemish and German of a new booklet for distribution at the Antwerp Exhibition; a new edition of the "Canada West" booklet in French; a new edition of the "Descriptive Atlas of Canada" for distribution in the United States.

The publications completed by the Department during the year may be tabulated as follows:—

	Copies
Atlas of Canada—British.....	104,750
Atlas of Canada—United States.....	106,400
Boy Scout Booklet.....	15,000
Boy Settlement in Canada.....	29,000
British Family Settlement in New Brunswick.....	20,200
Calendar.....	79,150
Canada, 1930.....	12,160
Eastern Canada—British.....	100,800
Eastern Canada—United States.....	51,175
Farm Opportunities in Canada—British.....	209,950
Houseworker in Canada.....	35,000
Information for settlers.....	15,000
Land Settlement, Canada, Where to go for Advice.....	20,000
Vest Pocket Booklet—British.....	151,985
Vest Pocket Booklet—United States.....	154,275
Winning Through.....	10,300
All Publications.....	1,115,145

In addition to the above publications the Publicity Branch issued a weekly bulletin entitled "Canada Week by Week" which is distributed widely to newspaper editors and through other publicity channels. As a result of this bulletin a great amount of Canadian news is now being published in papers in the British Isles and the United States, and, to some extent, in other countries. The average weekly circulation is about 3,100 copies.

MOTION PICTURES AND PHOTOGRAPHS

The year has been a particularly active one in our motion picture work. A three-reel film showing the experiences of the new settler from the British Isles, from ocean passage to destination, with many illustrations of the agricultural life of Canada, was prepared, involving photography in many parts of the Dominion. A two-reel film showing the facilities for the accommodation of British boy settlers, illustrating the class of work they are called upon to do, using British boy migrants in the scenes at their actual and ordinary occupations, was also prepared. A one-reel film of a famous ploughing match showing methods of ploughing was prepared, as was also a one-reel film of a representative Canadian exhibition and agricultural fair. A five-reel film of representative scenes across Canada was produced from negatives already on hand at the Canadian Government Motion Picture Bureau. The latter was supplied in response to a special request for a film for use in Europe; the others were all furnished for use in the British Isles.

The branch has been steadily assembling a large collection of representative Canadian photographs, which are available, not only for the publications of the department, but for editors and publishers in Canada and elsewhere. Many demands from many sources are made upon this stock of photographs. During the year a series of illustrated postcards showing mainly agricultural scenes was produced and supplied to the representatives of the department in the United States for follow-up work, and some 3,000 enlarged reproductions of Canadian scenes were made for distribution to schools in the British Isles.

NEWS AND FEATURE ARTICLES

The Publicity Branch supplies a regular service of news to editors and news editors in the United States by means of the "Canada Week by Week" bulletin already referred to. This bulletin is also extensively used by the department's publicity connections in the United Kingdom. Clippings on file testify to the wide use which is made of this material, as well as of other special material provided upon request or as occasion may offer. During the year a circulation for this material amounting to over 165,000,000 was recorded in English language papers printed in the United States alone. This was greater than for any previous year and does not include a large volume of material used in the United States in papers printed in other languages. In some cases papers which first became interested in Canadian news through the service of this department have since established their own correspondents or their news connections in Canada. Publicity arising from such connections, is, of course, not recorded but is nevertheless the result of work initiated by the department.

During the year arrangements were advanced for an excursion of editors of leading United States farm journals through Eastern Canada in June, 1930. These visitors are members of the American Agricultural Editors' Association which in 1925 toured the western provinces, resulting in much direct publicity and in a better understanding of Western Canada's problems and the opportunities which that country affords for settlers. The excursion in 1930 will be of a similar nature covering the five eastern provinces, which were not included in the previous tour. It is being made possible by the co-operation of Canadian railways with the Department of Immigration and Colonization.

REPORT OF THE SUPERVISOR, WOMEN'S BRANCH, MISS M. V. BURNHAM

The report of the fiscal year ended March 31, 1930, shows an increase in the work both in the British Isles and in Canada. The following gives a brief outline of what is done by this branch. The statement of arrival of houseworkers by racial origins shows an increase in British of 923 over the previous year.

IN THE BRITISH ISLES

In the British Isles the department has eight Canadian women officers who work under the immediate direction of the agents in the following centres: London, Liverpool, York, Glasgow, and Belfast. Their duties are to interview all women who call at the offices for information, to give lectures as required, to hold interviews in the steamship offices as requested by the various companies. During the past year the women officers interviewed all women coming out under the Family Reunion Scheme, also the majority of the girls who applied for assistance under the Empire Settlement Scheme. A total of 4,574 cases were approved for loans under the Scheme during the past year.

Women paying full fare were not required to be interviewed by officers of the department unless they wished to be placed through Canadian hostels and receive free accommodation on arrival, medical inspection in the British Isles and civil inspection at the port of arrival being all that was necessary. This arrangement works out fairly satisfactorily when there is plenty of employment.

The Women's Branch of the Oversea Settlement Department, known as the "Society for the Oversea Settlement of British Women," works in close co-operation with the department in the British Isles.

In 1923 the Empire Settlement Scheme came into force, and since that period approximately 22,960 girls have come out as domestics receiving passage assistance. At first this took the form of a full passage loan. In 1926 the cash of passage to the migrant was reduced to £3 ocean rate. In 1927 the ocean rate was further reduced to £2.

Canada is not the only country seeking domestics in the British Isles. Empire Settlement passage assistance is extended to those wishing to go to Australia and New Zealand, the former giving a free passage and the latter a free passage and £2 landing money.

BRITISH TRAINING HOSTELS

Owing to the fact that the demand in the Dominion of Canada for houseworkers was very great, and to the fact that there were so many inexperienced girls applying for assistance, it was considered advisable by the British authorities to have training hostels started in the British Isles. A short course, therefore, of six to twelve weeks was arranged, as a testing and training period, to determine the suitability of the applicant for overseas domestic work.

In 1929 training hostels for free training in domestic work for young women wishing to proceed overseas were opened at Cardiff, Newcastle-on-Tyne, Millersneuk, near Glasgow, and London and later at Market Harborough. In these hostels girls are trained for Canada, Australia and New Zealand. Grants of 75 per cent are provided through the Ministry of Labour and the Oversea Settlement Department, the latter being responsible for the general administration and policy through the Women's Branch of the Society for the Oversea Settlement of British Women.

The Canadian contribution of \$20 per head was made towards the training of girls who proceeded to certain provinces co-operating in the scheme. No contribution was made to Market Harborough Training Hostel owing to the falling off in Canada of the demand for inexperienced domestics in the spring of 1930.

At the end of March, 1930, 241 domestic trainees had arrived, and 83 per cent were satisfactorily settled. The different problems illustrated that greater care must be exercised if this type of domestic was to be absorbed, and the matter was discussed with the Hostel Committees which are now all working to that end, and it is expected that there will be a higher percentage of satisfactory placements during next year. The selection during the past year was made by the Canadian women officers, one woman on our staff being appointed to confer with the Society for the Oversea Settlement of British Women and the Hostel Committees in matters relating to training, selection, etc.

IN CANADA

A Canadian woman officer meets every ship that lands at Halifax, St. John, and Quebec. She goes on board and confers with the steamship conductress to ascertain what special assistance is required. The steamship conductress disembarks when the ship lands and remains with the Canadian woman officer until all the unaccompanied women have passed through inspection. If any difficulty arises the new arrivals know that they have someone to turn to. The steamship conductress, therefore, performs an important work and the girls are given confidence when they see her with the woman officer as they pass through.

The woman officer's duties include the supervision of train conductresses, and she is a member of all boards of inquiry at the port on unaccompanied women.

The following statistics give an idea of the volume of this work:—

—	Ships met	Conducted parties	Special cars arranged for	Unaccompanied women with children		Children travelling alone
				British	Foreign	
Fiscal year 1929-30.....	489	423	640	18,638	22,387	436
Fiscal year 1928-29.....	482	396	374	13,282	17,777	446
Increase.....	7	27	266	5,356	4,610	10 decrease

The number of children travelling alone does not include juvenile parties, but refers to children joining parents or relatives, for whose safe delivery the railroad authorities are held responsible, the train conductresses giving assistance.

On arrival at the ports passengers undergo civil inspection, and arrangements are made with the railroad companies by the Woman Officer for special cars for parties of unaccompanied women.

In the Immigration building at the port the Red Cross Society has been allotted space to be used as a nursery where the incoming settlers can take their children to rest between the time of arrival and the departure of the train. During the year, 25,420 infants and children and 19,583 mothers were cared for. The nursery is a haven of rest at the port for the babies, and is appreciated by their grateful parents. The value of the work done by this organization can scarcely be overestimated. The Red Cross nurse co-operates with the Women's Branch and gives the train conductress any information which may assist her in looking after the welfare of the newcomers on the train.

The Imperial Order Daughters of the Empire manage a post office in the Immigration building for the convenience of the travellers and assist in the Red Cross Nursery as required.

Passengers waiting for their trains are also assisted by workers connected with the various churches and voluntary societies such as the Y.W.C.A.

IMMIGRATION CONDUCTRESSES

In the spring of 1929 the department employed thirteen women as conductresses for the trains which left the ports with new settlers. In the early spring of 1930 this number was reduced to nine, owing to the anticipated falling off in numbers of arrivals. It is the duty of these conductresses to co-operate with the train officials in loading the trains at the ports, and to travel on the trains giving care to the unaccompanied women and children as far inland as is deemed necessary. They give first aid to the sick, help the tired mothers, and look after the general welfare of the settlers. It is difficult to estimate the value of this work in dollars and cents. The journey in Canada is long, conditions on the trains strange, the money is different, and the general method of travel puzzling to the new arrival. The mothers through fatigue sometimes become discouraged, and it is at this stage that the conductress is able to cheer the weary, assist the sick, and give advice to the young adventuresome spirits. Since 1926 each conductress has been equipped with a tea kettle for use on the stoves in colonist cars, so that there may be boiling water ready to make tea and for the babies' bottles and sometimes baths.

The conductresses' duties during the past year have been made increasingly hard by the difficulty they have experienced in looking after the domestics from Southern Europe moving under the Railroad Agreement and destined to Winnipeg for placement. The greatest vigilance has been necessary, day and night, by railroad officials and conductresses to guard these girls to their destination. Foreign girls have at times jumped from the windows of the train, not wishing to proceed to their destination. These girls are liable to leave without a moment's warning, so that constant supervision is essential.

The following extract illustrates some of the difficulties:—

"M.....B.....gave considerable trouble and her actions nearly resulted in an accident. She raised the floor door of the car and was slipping under the closed outside door when she was caught and lifted back by her shoulders into the car. Had she been allowed to slip through she would have been struck by the train which was passing and likely killed."

"Mrs. K.....B.....travelling with husband to.....gave birth to a daughter at 5 a.m. March 20. At 2 o'clock her husband called the conductress stating his wife was ill. When conductress saw that Mrs. B.....was about to be confined she had a conductor wire ahead for a doctor at the first stop. The patient was made as comfortable as possible and shortly after the doctor arrived, the baby was born. The patient continued her journey and was brought to Winnipeg, where an ambulance met the train, taking them to the hospital."

"The conductor on the train from Winnipeg to Saskatoon about 10 a.m. asked me to come and see a sick woman. I saw that she was in labour and called a doctor. The doctor, not thinking confinement imminent left the necessary drugs with the conductress, who is a trained nurse and who was able to deliver the woman as the baby was born before they reached the next station."

The necessity of having trained nurses, if possible, or older women with experience, on these trains is shown by these and other cases.

The Travellers' Aid at all the stations does excellent work.

METHOD OF DISTRIBUTION

To British women seeking domestic employment the department allows twenty-four to forty-eight hours' free accommodation, in the following centres:—

Nova Scotia—

Halifax—Canadian Women's Hostel and Sisters of Service Hostel.

New Brunswick—

St. John—Y.W.C.A., and Rosary Hall.

Quebec—

Montreal—Canadian Women's Hostel and Catholic Women's League Hostel.

Ontario—

Ottawa—Y.W.C.A., Rosary Hall and King's Daughters' Guild.

Toronto—Canadian Women's Hostel and Catholic Women's League Hostel.

Kingston—Y.W.C.A.

Hamilton—Y.W.C.A.

London—Y.W.C.A.

Manitoba—

Winnipeg—Canadian Women's Hostel and Catholic Women's League Hostel.

Saskatchewan—

Regina—Canadian Women's Hostel.

Alberta—

Calgary—Canadian Women's Hostel.

Edmonton—Y.W.C.A., Catholic Women's League Hostel and Church of England Hostel.

British Columbia—

Vancouver—Y.W.C.A.

Victoria—Y.W.C.A.

Free accommodation for twenty-four to forty-eight hours is also given at Salvation Army Hostels in several centres in the different provinces.

British domestics are placed in work by the Provincial Employment Bureau in most of the centres. In Montreal, however, the Women's Hostel does most of the placing. In Hamilton, the Dominion immigration agent also places domestics. In Calgary, the Women's Hostel superintendent gives special attention to this branch of the work.

With reference to the foreign domestics, those from Central Europe move under what is known as the Railroad Agreement and are destined to Division Commissioner Gelley to be placed in situations which have been previously listed by the railroad companies. The largest number of the foreign group came from Finland and the majority of these have settled in the provinces of Quebec and Ontario, Montreal and Toronto being the chief centres.

The admission of foreign domestics is carefully watched by the department, and the necessary check applied if there is any lack of employment. Owing to the falling off in the demand for inexperienced domestic labour in Canada, it is anticipated that there will be a falling off in the number of foreign domestics seeking admission to the Dominion.

EMPIRE SETTLEMENT SCHEME—TOTAL ARRIVAL OF HOUSE- WORKERS RECEIVING ASSISTED PASSAGE— FISCAL YEAR 1929-30

Province	Nominations		Trainees	Ontario Gov- ernment	Salvation Army	Totals

Total.....	917	2,229	226	624	301	4,297

The number (4,574) mentioned at the beginning of this report refers to those interviewed during the fiscal year. The above statement is of arrivals during that period, hence the apparent discrepancy in numbers.

Since the beginning of the Empire Settlement Scheme in 1923, approximately 22,960 British girls have been assisted for domestic work in Canada. The number required each year is ascertained by the department by consultation with the provincial Governments and the Employment Service. The girls coming under this Scheme are under the special supervision of the department, and the names are listed in fifteen different centres where there are Dominion immigration officers. Quarterly reports are received by the supervisor of problem cases which arise. There are Women Investigating Officers attached to the following offices: Montreal, Ottawa, Toronto and Winnipeg. At Halifax, St. John and Quebec the women officers act in that capacity, and the conductresses frequently make investigations as required.

The majority of the girls have settled in the cities of Toronto and Montreal. In the former there are three women officers for the department, and in Montreal two women officers. The following report gives in tabulated form an idea of the work done in these centres:—

Toronto	
Investigations.....	2,586
Interviews.....	3,667
Letters received.....	12,885
Letters sent.....	13,877
Telephone calls.....	8,042
Major problems.....	337
Minor problems.....	872

Montreal

Interviews.....	1,995
Letters written.....	4,312
Trains met.....	416
Detentions met.....	57
Boats met.....	156
Major problems.....	96
Minor problems.....	361

IMMIGRATION AND COLONIZATION

Taking all the reports from the fifteen centres, during the past fiscal year there have been 543 major problems, such as illegitimacy, immorality and ill health. This does not refer to girls who came out in any one year but in all years. Since 1926, 15,009 girls came in under the Empire Settlement Scheme. The present standing of the problems of 1929-30 is as follows:—

Cases still active.....	264
Deported.....	106
Being re-established.....	90
Married.....	42
Returned home otherwise than by deportation.....	28
Cases regarded as closed.....	11
Died.....	2

In addition to the above there were 1,600 minor problems due mainly to inexperience, desire to change places, unsettled character and illness.

The department is assisted in problem cases by various welfare organizations and Social Service Departments. In the care of the unmarried mother and child, in Toronto the Infants' Home and Catholic Welfare Bureau must be mentioned with appreciation, and in Montreal the Women's Directory and the Society for the Protection of Women and Children. The trained workers of these organizations work in co-operation with the department. As far as possible each girl who has become a problem in the community is given the benefit of intelligent and efficient advice so that if possible she may become re-established.

CANADIAN WOMEN'S HOSTELS

These hostels are in receipt of grants from the Dominion Government and usually from Provincial Governments, are undenominational, and under local management; the committees being comprised of women representing women's organizations in each centre. The hostels are situated in the following centres: Halifax, Montreal, Toronto, Winnipeg, Regina and Calgary. Monthly reports are made by the superintendents to the supervisor at Ottawa. The department pays for twenty-four to forty-eight hours free accommodation for all house-workers immediately after their arrival in Canada. These hostels are used as clubs by the girls, and the personality of the superintendent is a great factor in the success of each hostel.

In Toronto where so many of our Empire Settlement girls are located, the hostel arranges lectures and entertainments.

Our records show that during the year 2,720 girls registered at the hostels on arrival in Canada. Of this number 1,686 were registered at the Toronto Hostel. In Toronto the hostel received and distributed during the fiscal year, 21,710 letters an increase of 6,039 over the previous year. This heavy mail indicates that the hostel is being used by a great many girls.

In Montreal the superintendent receives those destined to other centres who are taken to the hostel to rest while waiting for a change of trains. Also, the superintendent does the placing of domestic destined there.

CO-OPERATION WITH THE DEPARTMENT OF HEALTH

This branch continues to forward to Dr. Helen MacMurchy, Chief, Division of Child Welfare, Department of Health, the names of all women who come to this country to be married. The number during the past year was 571. In addition, the names of all women coming out under the Family Reunion Scheme to join husbands, were sent in, and in this way women far from home and friends are put in touch with someone who can at any time give them useful information and advice.

THE UNITED SERVICES FUND

Women in Canada who served during the Great War in the Women's Auxiliary Army Corps, Queen Mary's Auxiliary Army Corps, Women's Royal Air Force and Women's Royal Navy Service, still benefit under the United Services Benevolent Fund. The supervisor receives money as required from the headquarters in London, England, and looks into the merits of each case applying for financial assistance. This year thirteen women received assistance.

SOCIETY FOR OVERSEA SETTLEMENT OF BRITISH WOMEN

The Society for the Oversea Settlement of British Women is recognized as the Women's Branch of the Oversea Settlement Department, and is representative of all the organizations in the British Isles connected with the emigration of women.

During the fiscal year 1929-30, seven parties were sent out by this organization. These parties were specially conducted on the steamships, and also on the trains in Canada.

During the year 278 cases were referred to the Department of women and children in Great Britain wishing to come out to Canada to join the husband and father. Also 118 families, namely, 112 women and 336 children, arrived with S.O.S.B.W. loans. In 59 cases the families were able to raise their own passage money, and did not require financial assistance, but the investigation was completed in order to ascertain whether the settlement arrangements in Canada were satisfactory.

The society reports show that they made arrangements during the calendar year 1929 for the reception of 130 cases of women deported from Canada. The S.O.S.B.W. work in co-operation with the Travellers' Aid, National Vigilance Association, the Girls' Help Society, and local social organizations, and in this way deported women have been assisted. This welfare work is important, and the organizations in Canada who have assisted in looking after the girls are glad to know that further care is given in Great Britain.

Miss Franklin, the Secretary of the S.O.S.B.W., came to Canada on an official visit in September, 1929, to look into opportunities for British women in the Dominion. Opportunities were afforded Miss Franklin to study in detail the work done by the Women's Branch, Hostels, social organizations, etc. Miss Franklin travelled from the Atlantic to the Pacific and was untiring in her efforts to learn as much as possible of local conditions throughout Canada. She conferred with the supervisor on many occasions to discuss the settlement of women in this country, and gave numerous addresses.

CANADIAN COUNCIL OF IMMIGRATION OF WOMEN

The Executive Committee of the Canadian Council of Immigration of Women met Miss Franklin in Ottawa in October, 1929, to see if the organizations could be of any assistance to her while she was in Canada, and it was decided to call a general meeting of the council to confer with Miss Franklin before she returned. This meeting was held in Ottawa on November 29 and 30, 1929.

On the Canadian Council of Immigration of Women are represented the following national organizations:—

- Canadian Council of Agriculture.
- Canadian Council of Child Welfare.
- Canadian National Committee on Mental Hygiene.
- Canadian Red Cross Society.
- Canadian Legion of the British Empire Service League.
- Catholic Women's League of Canada.

Federated Women's Institutes of Canada.
 Imperial Order of the Daughters of the Empire.
 National Council of Women.
 Social Service Council of Canada.
 Trades and Labour Congress of Canada.
 Women's Auxiliary to the Missionary Society of the Church of England.
 Women's Christian Temperance Union.
 Women's Missionary Society of the United Church of Canada.
 Women's Missionary Society of the Presbyterian Church of Canada.
 Young Women's Christian Association.

APPRECIATION OF THE WORK DONE BY THOSE INTERESTED IN IMMIGRATION

It is impossible in this report to record all that is done in immigration work by the various organizations in Canada. At the Atlantic ocean ports the following religious bodies have representatives to assist the newly arrived settlers.—The Church of England, the Roman Catholic Church, the United Church of Canada, the Presbyterian Church and Salvation Army.

The following societies also have workers at the port, in addition to the Red Cross Society mentioned earlier in this report: the Bible Society, the Imperial Order of the Daughters of the Empire, the Jewish Immigrant Aid Society, the Sisters of Service, and the Young Women's Christian Association. The railway station work done by the Imperial Order of the Daughters of the Empire at Montreal, is of great assistance to the travellers.

Social service work in the Dominion is well organized and the Department receives the co-operation of the welfare agencies in all centres. This is specially appreciated in connection with the Young girls who come to Canada for housework and are far from home and relatives.

REPORT OF THE SUPERVISOR OF JUVENILE IMMIGRATION, G. BOGUE SMART

In presenting my report on the activities of this branch of the department for the past year, I am pleased to record a satisfactory year's work, the extent of which exceeded that of the previous year. A total of 17,230 applications were received at the headquarters of the societies during the past fiscal year, and the number of juveniles who migrated during the same period was 4,281. These young people came from England, Wales, Scotland and Ireland, the number from England predominating.

The migration of juveniles from Great Britain to Canada is the pioneer of organized immigration from the British Isles to any of the outposts of the Empire. The first party of juveniles to leave Great Britain arrived at the port of Quebec sixty-one years ago. Strange as it may seem, however, the real economic importance of the movement was for a great many years unappreciated. The movement received very little attention beyond casual and brief reference in the reports of immigration agents at the ports of arrival, which appeared in the annual departmental blue books. Since the Great War however, British juvenile migration has been more fully recognized.

The majority remain in agricultural employment; others who are inclined to other avenues of industry than farming, have become successful in other walks of life. The number who have not become good Canadians is relatively small.

Under the provisions of the Oversea Settlement Act and the agreement between the Government of Great Britain and the Government of Canada in

connection therewith the Juvenile Migration Movement to Canada appertains to boys between 14 and 19, and girls between 14 and 17 when migrating under the auspices of a provincial or an approved society.

The following are the conditions governing the migration of juveniles to Canada:—

(1) The Director of Emigration for Canada in London is furnished with particulars of each juvenile whom the organizations propose for migration to Canada.

(2) The acceptance of the juvenile is conditional on

(a) his ability to pass medical examination as to his mental and physical soundness before leaving the mother's country;

(b) he must be able to read and write;

(c) on arrival at a Canadian port each juvenile is subject to the Law and regulations governing admission of immigrants to Canada.

(3) Each society must provide a suitably equipped Receiving and Distributing Home or centre, to which the juveniles are to be conducted on arrival, and from which they will go to situations provided for them by the society and to which they may return pending replacement, or for any other reason.

(4) The organization must assume responsibility for placing juveniles in employment in suitable farm situations in the case of boys, and in household work in rural or urban homes in the case of girls. In this connection all recommendations and other documents having to do with each situation in which a boy or girl is placed, must be kept on file in the Receiving Home, and be available for inspection.

(5) The juveniles are to be placed under a written agreement in which the wage to be paid, and other conditions of employment, must be specified.

(6) The society is required to undertake and maintain a systematic supervision of each juvenile. Written reports on employment of the juvenile and the situation, and the conditions as found by the society's visitors are kept at the Receiving and Distributing Home, and are available for inspection by an officer of the Department of Immigration and Colonization whenever required. A staff of qualified visitors responsible directly to the society must be employed for this work.

(7) The society must furnish the department with a list of the names and ages of the juveniles, together with the names and post office addresses of their employers, and promptly advise the department in the case of change of employer, whenever such occurs.

Employers are not permitted to transfer boys to another person without the authority of the agency by whom the boy was placed. When a boy leaves his situation it is the duty of the employer to notify the society at once and the latter to inform the department.

Inspections made by this Branch at the various Receiving Homes or Hostels, and interviews with employers during the year just ended, show that in the majority of cases, the juveniles are well settled, in good homes and situations, and are generally giving satisfactory service.

During the year 6,442 transfers or changes of situation occurred; this process is of course inevitable, bearing in mind the thousands of boys and girls under supervision. These changes or shiftings were in the main due to the completion of yearly indentures, disagreement as to wage demanded, dissatisfaction on the part of the boy or his employer, injudicious treatment and general unsuitability of situation.

IMMIGRATION AND COLONIZATION

RECEIVING HOMES, HOSTELS AND TRAINING FARMS

The establishment of these centres in Canada is an important and essential feature of the juvenile immigration movement. The boys and girls, while not encouraged to return at mere caprice, have a right to seek the protection and hospitality of these institutions when in need of help or shelter.

It will be noted that in the twelve months from April 1, 1929, to the close of the fiscal year, the number of juveniles migrating exceeded the total arrivals during the previous year, as will be seen by the following comparative statement:—

Society	1927-28	1928-29	1929-30
Armenian.....	14		
Dr. Barnardo's Homes.....	108	141	131

DOMINION OF CANADA

ANNUAL REPORT

OF THE

DEPARTMENT OF INDIAN AFFAIRS

FOR THE

YEAR ENDED MARCH 31

1930

OTTAWA
F. A. ACLAND
PRINTER TO THE KING'S MOST EXCELLENT MAJESTY
1931

*To His Excellency the Right Honourable Viscount Willingdon, G.C.S.I.,
G.C.M.G., G.C.I.E., G.B.E., etc., etc., Governor General and Commander
in Chief of the Dominion of Canada.*

MAY IT PLEASE YOUR EXCELLENCY:

The undersigned has the honour to present to Your Excellency the Annual Report of the Department of Indian Affairs for the fiscal year ended March 31, 1930.

Respectfully submitted,

THOMAS G. MURPHY,
Superintendent General of Indian Affairs.

OTTAWA.

REPORT

OF THE

DEPUTY SUPERINTENDENT GENERAL OF
INDIAN AFFAIRS

FOR THE YEAR ENDED MARCH 31, 1930

REPORT OF THE DEPUTY SUPERINTENDENT GENERAL

OTTAWA, December 18, 1930.

HON. THOMAS G. MURPHY,
Superintendent General of Indian Affairs,
Ottawa.

SIR,—I have the honour to submit the report of the Department of Indian Affairs for the year ended March 31, 1930.

In the following pages will be found a brief outline of the more important administrative activities of the department during the period under review.

The Indians in common with other sections of the population have felt the effects of the prevailing lack of employment and low prices for agricultural products. The department, however, has taken all possible precautions for the prevention of hardship and no genuine appeal for relief is overlooked. The needs of the hunting Indians whose problem was treated at some length in last year's Report, continue to engage the closest attention.

FARMING AND STOCKRAISING AMONG THE INDIANS OF THE PRAIRIE PROVINCES

FARMING

In the spring of 1930 the Indians in the three Prairie provinces sowed 38,156 acres of wheat, 24,759 acres oats, 5,442 acres barley, and 2,918 acres of rye, as well as several hundred acres of gardens. They summer-fallowed approximately 32,273 acres of land, and at the time of writing they have about 112,000 acres under cultivation. The spring gave every indication of a good crop, but it was not long before reports reached the department that the blowing of soil had done considerable damage in certain parts, in fact at some points this blowing entirely ruined the crop. This was followed by rust, and the crop at other points, which had not been damaged by blowing, was reduced about 30 per cent from this cause. Sawfly and cutworm also injured the crops, but notwithstanding all this the Indians have reaped about 75 per cent of a normal year's crop. The price of threshing, and the cost of twine have remained the same as last year when prices were good. A large amount of summer-fallowing—32,273 acres—has been done this year, and the work on this land is equal to that done by the white farmers. While there is the weed menace to contend with, the situation on many of the reserves would not appear to be so bad as in the white settlements. Every effort is being made by the department to control the weeds. The breaking of new land might be approximately 8,000 acres; the exact figures are not known, but a large acreage of land has been broken this year, and the work is well done. In most cases this work was performed under adverse conditions, as the season has been very dry, making it very difficult to plow new land.

A large quantity of hay has been put up this year, and a shortage of feed is not anticipated. All reserves report an abundance of hay, and great care has been taken to see that it was put up in good time. At the time of writing 90 per cent of the hay is in stack. This is a very satisfactory state of affairs. The Indians have made a special effort, and great credit is due them. The quality of the hay this year will be better than for many years, there being no rain to speak of during the haying season.

STOCKRAISING

The live stock on all reserves is reported to be in good shape, and according to our records dated June 30, there are 22,385 head of cattle of all classes owned by Indians. There will probably be a slight increase in this number when the calves are finally counted. The Indians provide for all their own beef requirements. The day of buying beef from outsiders to feed the Indians has passed, and the beef consumed by the Indians in the three provinces is valued at approximately \$200,000. In addition to this our records show that they have sold between \$160,000 and \$170,000 worth of beef to outside buyers. This is a very satisfactory showing. The Department is doing its best to increase this branch of the work, as there is excellent pasture land on many of the reserves. There are reserves, however, where the cattle cannot be increased to any great extent owing to the fact that the amount of hay is limited.

Many of the Indians are now milking cows, and in some cases selling cream and butter. The number engaged in this work has increased during the last year.

The department has built about two thousand houses for Indians in the last three years on the various reserves in these provinces. Five hundred houses have been erected this year. These are of hewn logs, and many of them are placed on cement foundations. They have a door and from four to six windows and a second storey; certainly a great improvement over the old style of home. The whole situation in Manitoba and Saskatchewan has changed with regard to the condition of the Indian homes. These homes, as a rule are kept fairly clean; practically all are whitewashed once a year and some of them twice a year.

INDIAN HEALTH SUPERVISION

The Indians during the past year have been relatively free from the more common kinds of disease. Measles was prevalent along the Pacific coast in the autumn of 1929, and spread to the interior to some extent. Smallpox appeared in one or two places, but gained no headway. There was no outbreak of influenza.

HOSPITALS AND NURSING STATIONS

No new hospitals have been erected by the department during the course of the year. Assistance has been given, however, in erecting some hospitals in remote places where the Indians form such a substantial part of the population that the department finds it necessary to assume a portion of the capital cost of establishing or rebuilding hospital institutions.

A nursing station has been built at the Fisher River agency in Manitoba. This is a residence for a public health nurse, and has no regular hospital accommodation except a bed for an emergency case. The department hopes to extend this type of activity, and is now establishing another similar unit at Hobbema, Alberta. The advantages of the nursing station unit are obvious. It is relatively inexpensive, and so may be provided for a larger number of reserves. It enables a nurse to reside at the reserve, where her work and influence may be continuous. It provides a centre where the sick may come to see the doctor at appointed times, and where the doctor may have the assistance of the nurse and the equipment of the station. The nurse is not confined to an institution caring for serious cases who require the treatment afforded by a completely equipped hospital, or, as is sometimes the case, chronic cases who can quite well be treated at home with the advice and occasional visits of the nurse and doctor. Most important of all, it provides a service to the mothers of growing children, who can profit by frequent instruction.

PUBLIC HEALTH NURSING SERVICE

Important additions have been made to the staff of public health or traveling nurses. Four such nurses have been appointed in British Columbia, two in Ontario, and one in New Brunswick. The standard of qualification for this and other classes of nurses has been raised, and the compensation increased, and the department is now in a position to attract the very best nurses to its service. Only those having a university training in public health are eligible for appointment to the highest grade. Particular attention has been devoted during the year to this phase of health work, and a study has been made of the methods of provincial and voluntary nursing organizations. The Victorian Order of Nurses very kindly lent the assistance of one of its field supervisors for a survey of the reserve nursing problem in British Columbia and Ontario, and for the initial instruction of some newly appointed departmental nurses. Very encouraging reports are being received of the increased efficiency of the nurses, and of the benefits they are carrying to reserves to which new nurses have been assigned.

PART-TIME DOCTORS AND LOCAL HOSPITAL SERVICES

There have been no notable changes or extensions in these services during the year. The department employs the available doctor and patronizes the local hospital to the extent of the requirements in each locality. Specialists' services are afforded for cases beyond the skill or facilities of the local physician. It is noted that there is a steady increase in the demand on the part of the Indians for modern medical treatment, and in the interest displayed by part-time doctors in their Indian work. The department finds it constantly necessary to revise the salaries of these doctors to correspond with their increasing services.

FULL-TIME DOCTORS AND DEPARTMENTAL HOSPITALS

A highly qualified doctor, who also acts as Indian agent, has been stationed at Moose Factory, on James bay. Hitherto the only medical service available in that area has been the annual visit of a doctor with the treaty paying officer, and a small hospital at Fort Albany, conducted by a religious order. The doctor has found it possible to perform some major surgical operations with very small facilities, and his visits may be expected to prove of very welcome assistance to the sisters at their remote station. The approach of the railway to Moose Factory holds out a prospect of substantially increasing medical facilities on the bay.

The departmental hospitals at the Six Nations reserve in Ontario and the Blackfoot reserve in Alberta have been patronized by the Indians to such an extent that it has been found necessary to provide more space. This is being done by erecting nurses' residences, thereby adding to the comfort of the staff, and making their rooms in the hospitals available for patients. The new hospital at the Blood reserve is operating with the greatest satisfaction.

A separate wing for Indian patients has been erected at Cochrane, Ont. It is conducted by the Lady Minto Hospital, the department paying the salaries of part of the staff and a daily per capita grant to the hospital.

There is a remarkable increase in the amount of medical attention demanded by the Indians of northern Ontario. At Cochrane, Chapleau, White River, Armstrong, and many other points they are reporting for treatment in large numbers.

TUBERCULOSIS

It is regretted that it is not possible to report more progress in combatting this the most important of diseases among Indians. The necessity far exceeds both the facilities and the funds available. There are several reserves where the number of infectious cases is so small that the disease might be stamped out if it were possible to devote the whole of the appropriation for this purpose to

these reserves. But equally strong appeals for help come from almost every reserve. At the present time it is being found necessary to refuse applications for sanatorium treatment due to lack of funds for maintenance. The department appeals to the interest of Parliament for funds with which additional personnel and facilities may be provided. The proper course undoubtedly is to attack the disease in its weakest places, viz., on reserves where there are small numbers of cases, and where the resistance of the Indians to it is relatively high. This will involve intensive effort, carried out by personnel of more than ordinary training and experience, and, for this reason, costly. It will also involve, in some provinces, the provision of more sanatorium accommodation. At the same time the work now being done, and which consumes all available funds, cannot with humanity be lessened.

HEALTH SUPERVISION IN SCHOOLS

The appointment of more public health nurses has afforded new facilities for the examination of school pupils, and doctors have been requested to devote more attention to this phase of their duties. As a result, there has been a great increase in dental services for the growing children, and in remedying defects such as enlarged tonsils and defective vision. It appears that the removal of diseased tonsils is an effective measure in healing and preventing scrofula or tuberculous glands.

The usual health supervision of pupils in residential schools has been carried on and these pupils have shared in the increased service referred to above.

SPECIFIC DISEASES

Venereal disease exists among Indians as among the white population. During the year under review special effort has been made to discover and bring under treatment all cases of syphilis. It has not been found that there is any cause for alarm in the situation. Many reserves do not appear to have any cases, and where the disease does exist, the affected Indians submit willingly to treatment.

A survey of certain reserves in Alberta and British Columbia is now being carried out in order to discover the incidence of certain forms of eye disease. The work is being done by a highly trained specialist. His findings will not be available for the present report.

In the early summer of 1929 an Indian boy at Fort George, on the eastern shore of James bay, was accidentally injured in a shooting accident, receiving a compound fracture of the thigh, one of the most severe injuries which can occur without causing early death. There were no facilities for his immediate removal or adequate treatment at home, and in spite of the best efforts of the local missionary, the wound became infected, and the boy seemed sure to die. News of his condition reached Ottawa only after some weeks. At the time of its receipt, the Royal Canadian Air Force flying officer who had been carrying the treating paying party in northern Ontario had just returned to Remi lake, west of Cochrane. The flying officer was instructed to try to remove the boy. He left Remi Lake on the morning of August 1, flew to Fort George, and brought his patient into Ottawa the same evening. This flight of more than 1,000 miles was carried out in bad weather and over entirely uninhabited country. The boy was placed under the care of an Ottawa specialist, and has now entirely recovered. This case is referred to because it attracted a good deal of public attention at the time.

In concluding this part of the annual report, it is desired to acknowledge the co-operation of the provincial Governments, and of other departments of the federal Government, particularly the Royal Canadian Air Force and the Royal Canadian Mounted Police.

LANDS AND TIMBER

LANDS

The general situation with respect to the administration of surrendered Indian lands was not as satisfactory during the fiscal year 1929-30 as during the previous twelve month period. This was due mainly to the widespread depression culminating in the spring of 1929, affecting adversely both the purchasing power of the public and payment of obligations previously incurred. In addition, crops on the average throughout the western provinces were greatly below expectation and prices received in many cases actually under the cost of production. It is possible that more or less similar conditions will prevail during the ensuing season. The department at all times endeavours to collect all land payments as they fall due, but it has been necessary during recent months, to adopt an exceptionally lenient attitude both in the interest of the purchasers and the various local municipalities. Notwithstanding this the department is quite confident that any arrears which may accumulate in this manner will be quickly paid up, should one or two satisfactory crop years follow, as occurred in 1927 and 1928. The western farmer is a particularly optimistic individual and so long as he remains on the land he may be considered quite solvent.

Sales of surrendered Indian lands during the year reached the substantial figure of 29,222 acres, realizing \$452,663.75, representing a very satisfactory sale price per acre. The total amount of surrendered lands as represented by current sales or available for sale is now 199,906.53 acres, in connection with which \$1,165,980.63 in principal is outstanding. New land sales and receipts therefrom were practically double that of the previous fiscal year.

The principal sales during the year involved the disposition by public auction of the Little Black Bear reserve in the province of Saskatchewan and Beaver reserve and ten smaller Indian properties in the same locality, all in the Peace River district of Alberta. The Little Black Bear reserve contained 3,696 acres and was sold for \$34,654.75, the initial cash payment amounting to \$13,007.68. The Beaver and other reserves close by contained an aggregate area of 16,116.18 acres and were sold for the very satisfactory price of \$321,868.38, the initial cash payment being \$33,359.05. The terms and conditions in connection with both these sales was a cash down payment of ten per cent, the balance to be paid in nine equal and consecutive annual instalments with interest at the rate of six per cent. A sale of lots in The Pas townsite in Manitoba was also held for which the sum of \$17,120 was realized, the initial cash payment being \$8,813. Including the latter amount, the total receipts for the year from The Pas townsite were \$30,874.89.

The amount received from the Blackfoot reserve crop shore leases during the year, was \$28,227.85. This was substantially below the amounts received during the previous two years, but the reasons for this have already been indicated.

PETROLEUM AND NATURAL GAS

The department was greatly interested during the year, in rather extensive geological and investigational work carried out by interested parties on three of the larger reserves in the province of Alberta, with a view to petroleum and natural gas development. Already some drilling operations have been carried out on the Stony reserve near Morley, but results have so far not been satisfactory. Some test drilling was done during the year on the Sarcee reserve near Calgary, for the purpose mainly of defining the underlying rock structure, but no attempt has yet been made to sink a deep well. It is possible, however, that such action may be taken in the near future. The major interest, however, has really centered in test drilling operations being conducted on the north end of the Blood reserve, not far distant from the town of Lethbridge. A consider-

able number of leases of the petroleum and natural gas rights covering portions of the Blood reserve, have already been issued by the department but the only development work so far undertaken has been carried out by a company which controls by lease a considerable area of this particular part of the reserve. A large sum of money has been expended by this company in test drilling operations, the results of which are considered most encouraging and it is expected that a deep well will be started shortly. Should this test prove successful, there is little doubt but that the Blood reserve will prove to be one of the outstanding oil fields of Western Canada. Insofar as the investigational and development phases of the situation are concerned, the department is offering every possible encouragement in the hope that the Indian owners of this reserve will eventually benefit greatly from royalties on production.

LEASES

Under the provisions of section 11 of the Regulations for the Disposal of Indian Lands leases were issued to white men at the request of Indian locatees to the number of 127, and on March 31 last there were 1,297 leases current.

LOCATION TICKETS

Location tickets, granting title under the provisions of the Indian Act, to individual owners for lands on the reserves were issued during the past year to the number of 180 and on March 31 last there were current 2,740 location tickets.

ENFRANCHISEMENT

Under the provisions of section 114 of the Indian Act there were enfranchised during the past fiscal year 23 Indians, heads of families, comprising a total of men, women and children of 45.

TIMBER

The quantity of timber cut for sale from Indian reserves in the Dominion during the 1929-30 season was about the same as the previous year. A decrease in the quantity of log timber was more than made up by an increase in ties, poles and posts.

The kinds and quantities cut were as follows:—

Pine (white).....	338,218 f.b.m.
Pine (red or Norway).....	268,005 "
Pine (yellow or bull).....	2,030,577 "
Pine (jack or banksian).....	1,478,599 "
Spruce (various).....	5,631,197 "
Hemlock (western).....	2,068,019 "
Hemlock (eastern).....	443,897 "
Cedar (red).....	436,612 "
Cedar (white).....	261,573 "
Fir (Douglas).....	3,226,414 "
Fir (balsam).....	646,539 "
Tamarac.....	343 "
Maple.....	942,288 "
Birch.....	531,600 "
Beech.....	354,950 "
Ash.....	2,786 "
Elm.....	145,025 "
Oak.....	67,476 "
Walnut.....	7,360 "
Basswood.....	30,919 "
Poplar.....	188,062 "
Cottonwood.....	140,697 "
Cordwood (mixed).....	8,925½ cords
Pulpwood.....	25,729½ "
Shingle bolts.....	284½ "
Ties.....	371,464
Poles.....	13,999
Posts.....	113,292
Piling.....	33,414 lin ft.

The total quantity of timber cut for sale, in terms of board measure feet was approximately forty-five million f.b.m., and in addition to this the Indians cut about ten million f.b.m. for building, fencing and fuel.

Sales of timber during the year were:—

Zaimoetz reserve, B.C.....	Deposit	\$1,550
Cowichan reserve Pt., B.C.....	"	500
Bucktum reserve, B.C.....	"	200
Ain reserve, B.C.....	"	300

Cash receipts were as follows:—

Licence dues and royalties.....	\$	66,064	98
Permit dues.....		17,875	55
Rentals and fees.....		2,181	50
Deposits.....		2,550	00
Payments on account.....		10,159	08
Compensation for damage to reserves.....		11,090	75
Trespass charges.....		1,559	62
Interest on over-due accounts.....		3,018	56
Fines.....			95 00
Sand and gravel royalties.....		6,203	72
Total.....	\$	120,798	76

There were 23 timber licences current on April 30, 1930, being the same number as the previous year, one having been relinquished, and one new licence issued.

Slight damage to timber on several reserves was sustained by forest fires last season, but special patrols were sent out during the hazardous season, especially in the Lake of the Woods area, and the loss of timber was by no means serious.

The destruction of timber by flooding of several reserves due to hydro-electric development is engaging the attention of the department, and compensation claims have been prepared and presented for settlement, one of which (Wabigoon reserve) has already been paid.

EDUCATION

During the year, 78 residential schools and 272 day schools were in operation, a total of 350 centres of Indian educational activity. The total enrolment was 15,743 and the average attendance 11,579—a percentage of attendance of 73.55. The enrolment for the year is the largest and the attendance the highest yet reached. Ten years ago, the average attendance was 7,649, and it is gratifying to note that the increase since that time is over 50 per cent. In Part II of this report will be found a tabular statement, showing the location and indicating the attendance at all Indian schools.

The same number of residential schools were in operation last year and the results have been very encouraging. Vocational training is possible at these boarding schools and the department continues to emphasize this important phase of the work. Mention should be made of the rapid development of technical education in British Columbia—made possible by special funds which have been provided for the purpose. In Ontario and the Prairie Provinces, emphasis is placed on farming, gardening and the care of stock.

The co-operation of the churches in the management of these residential schools was as follows:—

Roman Catholic.....	43	residential schools
Church of England.....	20	" "
United Church.....	13	" "
Presbyterian Church.....	2	" "
Total.....	78	" "

Two new day schools were established where there was promise of real usefulness. On many reserves the Indian schools now secure as good attendance and results as rural white schools. Provincial curricula for public and separate schools are followed and fully qualified teachers are engaged.

All Indian schools were regularly inspected by officers of the department. Particular attention is paid to the general management, condition and care of

property, vocational training and the health of the pupils. In addition, provincial school inspectors visited all class-rooms and reported on the academic work, except in the provinces of New Brunswick and British Columbia, where there were special Indian school inspectors.

It is with much regret that the department reports the death of the Sister Superior and 12 children when fire destroyed the main building at the Cross Lake Indian residential school, in northern Manitoba. Renewed efforts have been made in the matter of fire prevention and protection and all principals of residential schools have again been instructed to examine fire-fighting equipment and escapes and to practise fire drill regularly. Fireproof construction is now being used in all new buildings where there are children's dormitories and at all schools the Department has provided adequate fire fighting equipment and escape facilities.

New main buildings were commenced during the year at four residential schools—Brandon, Man. (Brandon); Punnichy, Sask. (Gordon's); Gleichen, Alta. (Old Sun's); Grouard, Alta. (St. Bruno's). In addition, the department assisted the respective church authorities with the reconstruction of new buildings at Beauval, Sask., Wabasca, Alta., and Providence, N.W.T. The new buildings at Alert Bay, B.C., and Kenora, Ont. (Cecilia Jeffrey), were completed and furnished during the year.

The buildings for the new Maritime Indian residential school at Shubenacadie, N.S., have also been completed and furnished. This institution is for orphan and neglected children and for those who are unable, for one reason or other, to obtain an education at the reserve day schools. It already gives promise of much usefulness to the Indians of the Maritime Provinces. At eight Indian day schools in Canada new classrooms or teachers' residences were erected.

The practice of assisting the most promising and industrious graduates of Indian schools was continued. Approximately 160 young Indian men and women were helped to continue their studies or to establish homes. Except in those Indian communities where successful farming is found, the school graduate presents a problem which is very difficult of solution. The department and the churches interested are trying new schemes and searching for better methods of helping the young people to establish themselves.

In the past, the funds of certain Indian bands were used to meet some of the costs of conducting day schools on their reserves. The year under review is the second that all expenditure has been provided by parliamentary appropriation. The program of free education is now extended to all Indians in Canada. The expenditure for Indian education for the fiscal year ended March 31, 1930, amounted to \$2,330,438.21, as follows:—

INDIAN EDUCATION VOTE—EXPENDITURE FOR YEAR 1929-20

	Day schools	Resi- dential schools	Station- ery	Tuition and assistance to ex-pupils	Miscel- laneous	Total
	\$ cts.	\$ cts.	\$ cts.	\$ cts.	\$ cts.	\$ cts.

The centenary of one of our most important schools falls during the coming year, and, as a matter of historical interest in connection with the development of the work of Indian education, the following short history of the Mohawk Institute has been prepared by the Superintendent of Indian Education:—

THE MOHAWK INSTITUTE

The first Indian residential school in Canada to complete one hundred years of continuous service is the Mohawk Institute at Brantford, Ont. It would therefore seem fitting at this anniversary to write a short history of a school, which has had an interesting past and which has been an important factor in the development of the Six Nation Indians.

The story of the Mohawk Institute would be incomplete without a brief statement concerning the organization which was responsible for its establishment and which has supported the school, without interruption, for a period of one hundred years. In 1649, in Cromwell's time, the New England Company was established by Parliament and was chartered twelve years later during the reign of Charles II. The company was an evangelical organization, interested in the natives of the British colonies in America. Its earliest efforts in Canada were in New Brunswick, when its activities were transferred from the New England States shortly after the War of Independence. In 1786, the Lieutenant-Governor and the Chief Justice of New Brunswick were appointed commissioners, along with seven other "fit persons," to carry out the aims of the company. The commissioners believed that the economic welfare of the Indian could be served only by some industrial training and, as early as 1808, General Coffin arranged for the apprenticing of several Indian boys to British settlers. Sussexvale was the principal seat of the New England Company's labours at this time. In 1822, the company discontinued this scheme and decided to trust to the example and teaching of missionaries and school teachers as a more effectual means of civilizing and evangelizing Indians.

At this time, the New England Company sought fields of labour elsewhere in what is now Canada; and, in 1827, its main attention was transferred to the Six Nation Indians on the Grand river in Upper Canada. Chief Thayendanegea (Captain Joseph Brant) had secured a site for his people on the Grand river, and in 1785 had arranged for a church and a school at the Mohawk village. The school teacher's salary was paid by the Imperial Government from the military chest. At that time the administration of Indian affairs was more military than civil in character. The chief functions of the Indian Department of the day were to get the Indians settled and to distribute presents. It was not until after Union and responsible government in 1841 that the administration of Indian affairs was placed under the Civil Secretary (1844). The school at the Mohawk Village flourished for several years, part of the time under the management of an Indian master. In 1813, likely due to the disturbances caused by the invasion of Canada, the school was closed.

John Brant, principal Chief of the Six Nations, youngest and worthy son of his father, was instrumental in focusing the attention of the New England Company on the Six Nations. He visited England in 1822, one of his requests being the establishment of an Indian school. He returned to Grand river and, in 1824, a school was started with twenty-one pupils. Two years later, he asked the company for funds to rebuild the church, erect a parsonage and other buildings and, although there is evidence that the materials for the Mohawk Village school were on the ground the same year, it was not until 1828 that the school building was ready for occupation.

Brant had asked the New England Company for a resident missionary. The Rev. John West had been sent out from England to report on conditions in the British colonies and, following his report, Capt. John Brant was made lay agent for the company and was sent funds for commencing the Grand River

work in earnest. The Rev. W. Hough was the first resident missionary. He remained only a few months and was succeeded by the Rev. R. Lugg, in 1827. The Company proceeded to establish four other schools for the Six Nation Indians.

In 1828, Rev. A. Nelles was appointed assistant missionary and was given the special care of the educational work. About 1,900 Indians were in the community when the New England Company commenced its work there and they supported it with a grant of approximately £750 per annum. The Mohawk Village was one mile from Brant's Ford, which had a white population of approximately 300.

In 1830, educational work at the Mohawk Village was extended to include a manual training school. A mechanic's shop was erected and two large rooms were occupied for teaching boys carpentering and tailoring. In addition, quarters were secured for the teaching of weaving and spinning to Indian girls. The activity was considered important enough to warrant the main attention of one of the missionaries, and the Rev. A. Nelles was placed in charge in 1831. It was not until six years later, however, when he was made chief missionary for the New England Company, that he moved his residence to the Mohawk Village. In 1834, the New England Company increased the establishment by opening residential quarters for 10 boys and 4 girls. These were taught along with the day pupils, both in the classroom and in the manual arts. It was at this time that instruction in farming was also added. The boarding school facilities were quite popular and the following year the number maintained had to be increased. The Indians were moving from the Mohawk Village to the present reserve and there was a great demand for space in the pupils' living quarters. This development of the work in the Mohawk Village was largely responsible for the increased cost to the New England Company of its missionary work on the Grand river. Approximately £4,000 per annum was necessary for its combined activities.

In 1838, there were suitable buildings and equipment for the maintenance and training of 30 boys and 10 girls. The older boys were trained as wagon-makers, blacksmiths and carpenters and the girls, in the duties of housekeeping and the arts of needle work, spinning and knitting. In 1843, when practically all the older Indians had left the village, the manual labour school was considered quite a successful institution and it was referred to by all interested in the betterment of the Indians' condition as a model institute. The pupilage was increased to 45 in 1844 and three years later there were 50 in attendance, with 50 on a waiting list. The average cost per pupil was stated to be £20 per annum. The chief instructor under the Rev. Mr. Nelles was a Mr. R. E. Clark.

The scheme of settling graduates on small farms near the Institute was tried shortly after the older Indians commenced to move away from the Mohawk Village. It is reported that in 1853 there were 40 adults practically all graduates of the school, residing near it, farming and following the trades which they had been taught. The day schools on what is now the reserve were only partly successful. Between 1820 and 1850, there is evidence of 13 or 14 separate day schools, most of them established by the New England Company, 3 by the Wesleyan Methodists and one by the Indian Department. Some of these were closed or were moved, as the Indians in those days were constantly moving from place to place. By 1853, the New England Company decided that the Mohawk Institute was meeting with so much more success than the day schools, that especial attention and funds should be devoted to its activities.

In 1859, the Mohawk Institute was rebuilt on the New England Company's 10-acre lot, which was a few hundred yards from the old site near the Mohawk Chapel. The company had originally acquired this lot, the Manual Labour Farm of 200 acres and other land, by purchase from individual Indians. In 1843, patent to its holdings was requested and Order in Council dated August 31 of that year granted the 10-acre lot to the company. Possession of the Manual

Labour Farm was offered as long as it was used for school purposes. The company did not accept this offer until 1856, when it was apparent that undisturbed possession was in the best interests of the institute and the licence of occupation was then issued. By 1864, it was found inadvisable to continue intensive training in trades other than farming. More land was therefore required for farm purposes and the company purchased the Babcock lot (32.95 acres) between the school and the town.

The new white brick three-story building accommodated 90 pupils and another period of usefulness was commenced. By 1867, three of the boys gave such academic promise, that arrangements were made for them to take classes at the Grammar School in Brantford. In 1869, three girls—Helen Johnson, Susannah Carpenter and Jemima Maracle—and two boys—Henry Johnson and Nelles Monture—were sent to Hellmuth College, London. This appears to be the first real effort to give advanced academic training to graduates of the Institute. At this time, a Mr. Bouslaugh was superintendent of the school under Canon Nelles.

It is interesting to note that His Royal Highness the Prince of Wales, later King Edward VII, visited the Institute and the Mohawk Chapel during this period (1860). The first Indian to be appointed to the staff was Isaac Barefoot, a former pupil, who returned as a teacher in 1869. Barefoot had taught at No. 2 School on the reserve and had attended the Toronto Normal School. While on the Institute staff, he was acting principal at different times. Later, Mr. Barefoot attended Huron College, became ordained by the Church of England and served his own people as incumbent of one or other of the churches on the reserve.

In 1870, the New England Company erected an addition to the main building. A few years later additional space for the staff was provided. About this time there was also built a new principal's residence. The school then had accommodation for 90 pupils and the necessary teachers and instructors. As before, the capital expenditure was undertaken largely by the company.

Archdeacon Nelles retired from the principalship of the Mohawk Institute in 1872 and devoted his remaining years to missionary duties only. Before he died, he had given nearly fifty years of his life to the Six Nation Indians. Mr. R. Ashton, who succeeded him, gave early promise of much success with the interesting work. A few years after his appointment, Mr. Ashton took Holy Orders. The new principal had an eye for beauty and he turned the uninteresting grounds in front of the building into lawns and planted shrubs and trees.

The Rev. Mr. Ashton saw the advantage of having the Six Nation Indians take an interest in the conduct of the day schools on the reserve. He was instrumental in the appointment of a school board in 1878. On the board there were representatives of the department, the various churches interested and several Indians. This was the beginning of what is now the only Indian school board in Canada. Its composition has changed from time to time—the members now being Indians of the band and the department's representative. Mr. Ashton was the first secretary of the board and the first meeting was held in the Mohawk Institute. It is interesting to note that practically all the teachers of the day schools on the reserve in 1880 were graduates of the Mohawk Institute.

In 1885, the New England Company decided to accept other than Six Nation Indians, and, from that date, a small proportion of the pupils has always been from other reserves. At this time, the Department of Indian Affairs allowed its first grant for what might be called current expenses. Earlier, any public funds that were given were used to assist with improvements. An Order in Council in 1885 approved of ten scholarships of \$25 per annum for graduates of the Mohawk Institute who would attend high school in Brantford while in residence. It is interesting to note that Miss Susan Hardie was one of the first six to receive these Government scholarships. She made such good use of her opportunity, that in 1887 she was appointed teacher of the junior room.

Certain commissioners of the New England Company visited Canada in 1889, and they approached Mr. Vankoughnet, Deputy Superintendent General of Indian Affairs, in connection with a Government grant towards the maintenance of the Mohawk Institute. The following year, the Superintendent General, when in England, met the governors of the company in relation thereto. It was explained that the cost of conducting the school was \$79 per pupil per annum, and the department was asked for a per capita grant of \$60—the company representing that the conduct of the Institute was a serious drain on their financial resources. An Order in Council approved of this grant as from July 1, 1891, and, since that date, the Department of Indian Affairs has undertaken the major portion of the current expenses and has shared the responsibility for the conduct of the school.

In 1891, as the department was assisting with current expenses, the New England Company's funds were released for a very necessary addition to the school and for other improvements. Accommodation was then available for 125 pupils. In 1895, 110 children were being maintained and educated, and four years later the school was filled. At this time, the department allowed grant for 91 children. The training of the boys in blacksmithing, carpentering, etc., was then practically discontinued. The farming and gardening operations were considered more valuable to the Indians and were certainly more important to the financial maintenance of the Institution. A second greenhouse was erected in 1897.

At this time the Cadet Corps of the Mohawk Institute enjoyed a fine reputation. At a military review on Dominion Day, 1896, the boys carried off a silver tankard, the chief prize of the day. Lieut. Ernest C. Ashton (now Major-General) was the instructor.

In April, 1903, the main building was totally destroyed by fire. It had been erected in 1859 but had been added to from time to time. A few weeks later the barns were burned, and a little later again, the boys' playhouse, temporarily used as a residence, was destroyed by fire. There is no doubt that incendiarism on the part of pupils was responsible. In spite of the blow to its work and hopes, the New England Company decided to rebuild. The insurance on the old building was not sufficient for the reconstruction and the Department of Indian Affairs was asked for a grant towards the cost of a new building. In the interim, temporary provision was made for 85 pupils.

Before rebuilding, the company endeavoured to purchase the Manual Labour Farm, which had been secured by them from Indians and held under licence of occupation for many years. The Indian band was against the sale of its land and the company had to be content with the old arrangement. Two members of the court of the company, Lord Stamford and Mr. Wigram, visited Canada and decided that the new school should be erected on the old site. In 1904, \$33,000 was expended on the reconstruction—the new building having been designed by the Rev. Mr. Ashton and his son, Ernest. The following year the department granted \$3,000 towards the domestic water supply and fire protection. The new building was first occupied in October, 1904.

In 1911, the Rev. R. Ashton resigned from the principalship but continued as chaplain of the institute. His son, A. Nelles Ashton, was appointed principal. At that time, the department increased the per capita grant to \$100 and provided this amount for 120 pupils. The New England Company, in view of this large increase in the grant for current expenses, accepted the entire responsibility for the buildings. At the outbreak of war in 1914, Mr. Ashton resigned and enlisted in the Canadian Expeditionary Force. His sister, Mrs. A. M. Boyce, was appointed acting principal. The following year, the New England Company sent out to Canada the Rev. C. M. Turnell, M.A., who was placed in charge. Mr. Turnell made efforts to improve the standards of maintenance and training. During his time music was emphasized. He resigned after three years as principal and was succeeded by Mrs. A. M. Boyce. At this time,

General E. C. Ashton was appointed lay commissioner by the New England Company. The department allowed additional grant for 10 pupils in 1917 and again two years later, at which time \$120 per annum was allowed for each of 120 pupils.

The New England Company was finding it difficult to finance the school. Some years earlier, when funds were required for the company's school at Lytton, B.C., some of the Glebe lot had been sold. (This money was later refunded and used for improvements at the Mohawk Institute.) The company sought permission to sell part of the Manual Labour Farm and to devote the proceeds to school purposes. When the department could not agree, the Babcock lot, which was owned by the company, was sold.

In 1918 the company was obliged to effect economies and, not wishing to retrench in their educational program, the Department of Indian Affairs was approached. It was explained that the company's income did not increase and that the purchasing power of money had been materially reduced. The department did not purchase the property of the school but the responsibility for current expenses was undertaken. The per capita grant was increased from \$120 to \$200 and the department, in conjunction with the principal, endeavoured to place the school on a sound financial basis. In 1921, it was possible to reduce the grant to \$180 per child.

In 1922, it was determined by the courts that the Manual Labour Farm belonged to the Six Nation Indians. The department decided to pay a rental to the band funds of \$500 as long as the property was required for the Institute. A few years earlier, the company had voluntarily relinquished possession of the Glebe lot, but the use of 90 acres of it for school purposes was continued.

Certain improvements were necessary, and before spending public money on the Mohawk Institute, the department decided to make some arrangement with the owners. Dr. Duncan Campbell Scott, Deputy Superintendent General, interviewed the Governor and the members of the court of the New England Company in London, England; and secured a lease of the Institute for a term of twenty-one years. The company gave the department an annual grant of £1,000 towards the stipend of the principal and the maintenance of the school. In 1922, the department enlarged the main building, at a cost of \$43,000. The same year, Mrs. A. M. Boyce married Mr. S. Rogers, the assistant principal, and he was appointed to the principalship.

The per capita grant was placed at \$160 per child in 1922, which amount was more in harmony with the departmental scale of grants to Indian residential schools. In addition, a special grant was allowed for every pupil that was attending high school in Brantford while living at the Institute. Three years later, grant was provided for five more pupils—a total of 125. In 1927 and 1928, a new barn was erected and other improvements effected by the Department, at a total cost of approximately \$10,000. At this time, Mr. Chubb, a member of the court of the New England Company, and Major Bush, the charter clerk, visited Canada and made an inspection of the school. In 1929, upon the resignation of Major Rogers, the Rev. H. W. Snell, B.A., was appointed principal. Miss Susan Hardie, senior teacher, was given an address and a presentation by the Six Nation Indian Council. In 1929 she completed her forty-second year of continuous service in the classrooms at the Institute. The ex-pupils also presented her with an address.

At the time of this writing, the department is considering the finishing of the top story on the boys' side of the building, which improvement will provide accommodation for an additional twenty pupils.

Throughout the entire history of the school, the chief place of worship for the pupils has been that very interesting church known as "His Majesty's Royal Chapel of the Mohawks." Very few Indians, other than pupils, have worshipped there regularly since the desertion of the Mohawk Village, about ninety years ago. As mentioned earlier in this story, Chief Joseph Brant was successful in

having His Majesty's representative provide a church for the Mohawks who were about to settle on the Grand river. In 1785, a contract was let for this, the first church to be built in Upper Canada and the first Protestant church in either of the Canadas. Alterations and improvements were made in 1829 and the following year the Chapel was consecrated by the Bishop of Quebec. In 1869, the building was again improved—the necessary funds having been collected by Archdeacon Nelles and others. The Six Nation Indians and the New England Company were contributors. It should be stated that the principal or the chaplain of the Mohawk Institute was always the chaplain of the Royal Chapel. In 1904, Rev. R. Ashton placed the facts concerning this interesting Chapel before the Governor General, praying that His Majesty King Edward VII might be pleased to call it "His Majesty's Chapel of the Mohawks." His Majesty graciously gave his consent.

The Royal Chapel is the possessor of some most interesting and valuable relics, including a solid silver Communion Service and a large Bible, the gifts of Queen Anne. In 1709, several Mohawks from the British colonies had been taken to England, where they were received by the Queen. She presented them with medals and promised further gifts. The Bible and the silver plate were presented to the tribe in 1712. The silver Communion Service bears the inscription, "The Gift of Her Majesty Ann (sic), by the Grace of God, of Great Britain, France and Ireland and of Her Plantations in North America, Queen, to Her Indian Chapel of the Mohawks." The date is not inscribed but the silver-smith's hall-mark is that of 1711. During the American Revolution these treasures were buried in the ground for safekeeping. Later the Indians returned, recovered them and brought them to their new home in Canada. Part of the original Communion Set is now at the Tyendinaga reserve, near Belleville, on the bay of Quinté, where some of the Mohawks had settled.

Since the Bible and the Communion Service have been at the Mohawk Chapel, many notables have visited there and the flyleaf of the Bible has been signed by the following, among others: King Edward VII, King George V, Queen Mary, the Prince of Wales, the Duke of Connaught, Princess Patricia, Lord Lisgar, the Earl of Dufferin, Sir John A. MacDonald, the Marquis of Lansdowne, the Earl of Minto, Earl Grey and the Duke of Devonshire. As the Prince of Wales wrote his signature, he remarked that it was the first time he had ever signed on the same page with his father and grandfather. Recently have been added the signatures of Prince George, Baron Byng of Vimy, Lord Willingdon and Premier Baldwin. There is also a Royal Coat of Arms, sent out from England by the Government in 1786. This also had been ordered by Queen Anne. Accompanying the Coat of Arms were tablets on which were inscribed, in Mohawk, the Lord's Prayer, the Ten Commandments and the Apostles' Creed.

The grounds about the church have been used as a cemetery and contain the graves of many noted Indians, pioneers and loyalists. Probably most notable among these is that of Thayendanegea, whose tomb has required protection from souvenir hunters. This tomb contains also the remains of his son, Captain John Brant. Outside the entrance to the church hangs the original bell, which was at one time rescued from the hands of a junk dealer by Chief George Johnson, the father of Pauline Johnson, the Indian poetess.

The Prince of Wales' first visit to the Royal Chapel was on October 20, 1919. The Mohawk Institute provided the guard of honour. His Royal Highness planted a pine tree at Brant's tomb. The school is the proud possessor of an autographed picture of the Prince, presented shortly after his visit.

The Mohawk Institute has always given prominence to student organizations and this has been responsible for the fine spirit among the older pupils. The work of the Cadet Corps has already been mentioned and the Girl Guide organization has been equally effective. The chief sports have been hockey, football, basket ball, baseball and track events. In the early days, lacrosse

was popular. Peter White, of the St. Regis reserve, who graduated about forty years ago, became one of the most famous lacrosse players in Canada. Some of the boys have been quite prominent in distance running. Tom Longboat, who left school in 1901, achieved international fame as a marathoner. Two or three pupils who are now in their 'teens show great promise at the middle distances.

During the Great War, 86 graduates enlisted for overseas service—5 making the supreme sacrifice. Fred Loft, a graduate of 1875, became a commissioned officer. Other Indian graduates were non-commissioned officers and practically all of those on the school's honour roll served with great credit to themselves and to their race.

There have graduated from the Mohawk Institute many Indian boys and girls who have made good, not only on their reserves, but in white communities. Some have been named earlier in this article, but there are others who are worthy of special mention. Approximately 55 graduates have proved successful teachers at Indian day schools. Sarah Davis, Lydia Lewis and Catherine Maracle, graduates of 1880, gave splendid service as teachers on the Six Nation reserve. The first named, who taught for 27 years, was a great reader and a well informed woman. Her influence and example have done much for the community. Elam Barefoot, a graduate of 1882, taught on the reserve for 20 years and for the past 12 years has had a good position with the Cockshutt Plough Works at Brantford. John Lickers, the present truant officer on the reserve, graduated in 1885 and taught school for many years.

The Mohawk Institute is still turning out teachers who give fine service among their own people. Wilma Smith, a graduate of 1918, obtained professional standing and taught very successfully for 10 years. She was the first Indian student to graduate in music and she has been organist, respectively, at the Mohawk Chapel and Sour Springs Church on the reserve. Miss Smith resigned her school a year ago, upon the occasion of her marriage to Andrew Jamieson, who will be the first Indian to graduate from the Agricultural College at Guelph. Elva Miller and Sylvia Jamieson should also be mentioned as having given good service in reserve schools. Jessie Osborne, a graduate of 1883, taught successfully in white schools.

Three graduates of the Mohawk Institute, in addition to Isaac Barefoot, have entered the Christian ministry. The Rev. Thomas Whitebeans, a graduate of 1888, is the United Church minister on the Sarnia reserve. S. Brigham pursued his studies at Huron College, London, and became a Church of England clergyman on the Walpole Island Indian reserve. Melchie Henry, who graduated as recently as 1917, is the incumbent of a Baptist Church on the Six Nation Reserve. Several graduates of the 80's made their living as artisans in white communities. In this connection, the names of Isaac Williams, John Russell, Harry Jones, and Louis Jacques might be mentioned. A great number of the graduates of the Mohawk Institute became successful farmers. Special mention might be made of Nelson Moses, a graduate of 1878, and Archie Lickers, Frank Miller, William Powless, Jesse Moses, and William Smith, who are prominent in reserve matters at the present time. Foster Lickers, a graduate of 1899, and an honoured veteran of the Great War, is now fruit farming near Grimsby. The business world claimed Joseph Deslile, Thomas Green, Jacob Miller, and John Elliott, graduates of the 70's. The last named had a fine reputation as an orator. One of the earliest graduates of the school was Chief George Johnson, who was interpreter to the missionaries and was assistant to the Superintendent of the Six Nations. He left the Mohawk Institute about 1835 and was one of the finest Indians on the reserve. He built a splendid home and named it "Chiefswood." It was here that his daughter, Pauline Johnson, the famous Indian poetess, was born.

Many Indian girls who have left the Mohawk Institute have been noted as successful homemakers and splendid mothers. Special mention should be

made of Sarah Russell '88; Edith Styres '01; and Jessie Vanevery '09. Other graduates have made successful nurses. In this connection the names of Bessie Green '00; and Susanna Latham '06 should be mentioned. Business has claimed other girls when they left the Mohawk Institute. Outstanding successes were Floretta Maracle and Jane Osborne, graduates of '81; Beulah Styres '05; Phyllis Jamieson, Ida, Mary and Eva Curley, Rena Davis, Grace McNaughton, Alice Herkimer and Luella Moses, who left school during the war years.

Upon reviewing the history of the Mohawk Institute, which has served the Protestant Indians of Ontario for 100 years, it is evident that its contribution, particularly to the Six Nation Indians, has been of inestimable value. At least 1,300 Indian boys and girls have been maintained and educated in this Christian institution for a term of from five to eight years each. Special mention should be made of the service of Archdeacon Nelles and the Rev. R. Ashton, whose terms as principal total 80 years. Mrs. Ashton's long services are also worthy of recognition, as she took an active interest in the pupils of the school. The Church of England in Canada has always supplied a man in Holy Orders as principal or chaplain, and it may be stated that the Church and the New England Company have good reasons to be proud of their activity at the Mohawk Institute at Brantford.

The report of the Indian Commissioners *re* Adhesion to Treaty No. 9, was published in the Annual Report for 1929; the following is the report of the Indian Commissioners regarding the Adhesions to this Treaty taken in 1930.

REPORT OF COMMISSIONERS *re* ADHESION TO TREATY No. 9, FOR THE YEAR 1930

To the Honourable,

The Superintendent General of Indian Affairs,
Ottawa, Canada.

The undersigned commissioners appointed under and by virtue of a commission dated the 30th day of May, 1929, in accordance with a minute of a meeting of the Committee of the Privy Council approved by His Excellency, the Governor General, on the same date, to negotiate with the Ojibway and other Indians in northern Ontario an extension of James Bay Treaty No. 9, respectfully submit this, their second and final report:—

The commissioners made a report dated August 30, 1929, upon the question of the extinguishment of the Indian title on the last remaining area unceded in the province of Ontario, if not in the whole of Canada, and a reference to such report, which may be found on pages 20 to 23 of the Annual Report of the Department of Indian Affairs for the year 1929, discloses the situation as regards the area involved, defines the purpose of the negotiations with the Indians and details the work accomplished.

The area in question, generally speaking, comprises all that portion of the province of Ontario lying north of the Albany river and extending to Manitoba on the west and the Hudson bay and James bay on the north and east, comprising approximately 128,000 square miles, and containing a number of important Indian trading posts or encampments where the Indians barter their furs, enjoy for a few weeks each season a limited communal life and receive their treaty payments.

The great distances these posts are from white civilization and from each other, without ready means of communication, enhance the difficulty of reaching the resident Indians regularly and conveniently by any means except that of air craft. To understand the problem of keeping in direct contact with them, studying their needs and co-operating with them in an attempt to protect them

by maintaining their primitive pursuits for which by nature they are so successfully attuned, let it be said that the most northerly port of call this year, Fort Severn on the Hudson bay, at the northeast corner of the province of Ontario, is over 1,000 miles north of Point Pelee on lake Erie, the most southerly point of the province.

It is a long call from the primitive paddle to the palpitating plane but the latter device has helped to solve the problem by annihilating distances. Hence the flying machine is accomplishing in days now what required months and even years heretofore.

Last year, due to the magnitude of the area to be covered, and the inability to secure sufficient gas caches to supply the needs of the aircraft at the outlying points on the Hudson bay, Trout Lake and Lansdowne House were the only points at which Adhesion to Treaty was signed, the two other posts provided for in the program, Fort Severn and Winisk on Hudson bay, having been placed on the itinerary for the summer of 1930.

During the fall of last year and the spring of this year gas was transported by Hudson bay schooner from Montreal through the straits to the bottom of the bay, and then relayed to points on the west shore of James bay and to the trading posts at the mouths of the Winisk and Severn rivers. From Fort Severn 325 drums were conveyed by canoe transport 260 miles up the Severn river to Trout Lake which, however, by leakage, resulting from faulty shipment, had, much to the chagrin and keen discomfort of the commissioners and pilots, been reduced to a hazardous quantity of about fifty drums when the treaty party reached this post in July of this year.

As the annual payments under Treaty No. 9 had to be made to cover points at which the commissioners were required to call, the aircraft served the double purpose of conveying the commissioners and the treaty paymaster, the latter, H. N. Awrey, serving in the dual capacity of paymaster and commissioner, and with him Commissioner Cain collaborated in all payments. Under this arrangement an economy of time was effected and a joint provincial and federal check accomplished.

COMPANION FLIGHT

Last year the Dominion Government provided one plane and the provincial Government the other, but this year Ontario, due to the pressing demands made upon its flying fleet owing to the acute fire hazard, was unable to furnish one. Consequently the Royal Canadian Air Force, through the Department of National Defence, supplied two cabin planes, Fairchild's 71 with wasp engines, Nos. 113 and 114.

The instructions required each machine to keep in sight of its companion since much of the territory to be covered was far removed from contact with the older sections and was being air blazed and investigated for the benefit of future flying.

The officer in charge of the planes was Flight Lieutenant Dave A. Harding, with an important flying record of thirteen years to his credit, of which two and a half years was spent overseas for which he was awarded the Air Force Cross. Harding piloted plane 113 and Flying Officer Kingsley Rose, of Old Country experience, plane 114. Corporal Jerry McManus was the mechanic for the former and Rene Gauthier, A.C. 2, for the latter.

The itinerary provided for a hop-off from Ottawa to Remi Lake on July 2, and a return to Remi on or about August 4. This itinerary, however, made no provision for inclement weather, nor for a necessary and important detour or side trip to Sandy Lake narrows, near the Manitoba border, subsequently undertaken and fully referred to later on in this report.

The very unusual weather conditions of the spring of 1930 in Ontario, with its exceeding drought extending even beyond the middle of June, created an unprecedented fire-hazard in Ontario's distant sections and resulted in extensive

areas being burnt. This period was immediately followed by one of electrical disturbances and uncertain weather types that operated rather disadvantageously for flying craft.

Such conditions pursued the treaty party most relentlessly and the intermittent spells of semi-favourable weather had to be cautiously seized. As a result the commissioners found it necessary at all posts, as last year at certain posts, to disregard formality of hours and work steadily throughout the day and far into the night. Notwithstanding the incessant rains, the variable winds, the ever-recurring low curtained skies and other handicapping features, the schedule tentatively arranged before leaving Ottawa was reasonably maintained and for this the commissioners desire to express their appreciation of and thanks to the capable and painstaking pilots and obliging and efficient mechanics.

When one considers the distances covered, the extensive areas observed, with the numerous uncharted lakes, rivers and streams without human habitation and with few established points for direction, the importance of the Air Service in its ability to annihilate distances and perform feats that make for human and economic progress is manifest, and with the experience of several flying seasons, but particularly the last two, the commissioners consider it opportune to comment upon that which should be quite obvious, viz.: the need of a dependable personnel in the Air Service. Sobriety, caution and resourcefulness with the airman, each in turn, begets in the passenger confidence, stability and peace of mind, and the commissioners hereby freely pay tribute to the crews for exemplifying such qualities and also for applying technical knowledge in trying circumstances. Absolute freedom of decision on weather forecasts and hopping-off times, was left to the pilots, subject to the convenience of the commissioners and the performance of their duties. Sympathetic co-operation throughout the whole trip between the individual members of the crew and between the crew and the commissioners added an effectiveness and pleasantness to the tedious and exacting though interesting and historic task.

The provincial Government, through the Hon. W. Finlayson, Minister of Lands and Forests, very kindly intimated to the commissioners, prior to their leaving, that should any emergency occur the entire resources of the Ontario Flying Force were at their disposal—a considerate and practical suggestion, prompted by the spirit of sympathy traditional with the Ontario Government in its dealings with the Indians and fully appreciated by the commissioners.

A small 16 m.m. movie picture camera was taken by the Commissioners to make a permanent pictorial record of certain features of the trip, but unfavourable weather considerably interfered with the attempt and the pictures, the reels of which are lodged in the Department of Indian Affairs, are therefore limited.

JOURNAL RECORD OF TRIP

The two planes, with Commissioner Cain in No. 113 and Commissioner Awrey in No. 114, started from Rockcliffe Air port on the Ottawa river at 12.20 p.m. on July 2, 1930, in favourable weather, in the presence of Group Captain G. L. Gordon, Squadron Leader Major Godfrey, and Wing Commander G. O. Johnson, executive officers of the R.C.A.F., and a number of the relatives and friends of the treaty party, including representatives of the Department of Indian Affairs. After a delightful flight over the Ottawa valley and the picturesque country it embodies, Trout Lake, near North Bay, was reached at 2.20 p.m. Following luncheon the weather became bad and Officer Harding, upon learning by phone the weather situation at Moonbeam and Remi Lake, north of the Transcontinental railway six miles and west of Cochrane fifty miles, the objective for the day, decided to defer moving until next morning. The party, excepting the mechanics who remained with the planes, motored to North Bay and registered at the Empire Hotel.

About ten o'clock next morning, July 3, the weather cleared and the planes took off for Remi Lake where a landing was made at 1.30 p.m. At this point, the logical and only established air base in northern Ontario for hopping-off purposes in connection with flights to James bay and intermediate posts and locations up the Albany river, the Ontario Provincial Air Force have a comfortable and commodious lodge, an efficient set of officials and an excellent cuisine, financed and operated by the staff itself.

Dr. Mitchell of Sioux Lookout, representing the medical service of the Department of Indian Affairs, joined the party here. Certain equipment, including a "tank" of fly and mosquito spray, was secured and after a restful night the party, with Dr. Mitchell in plane 113, hopped off on Friday, July 4, with a clear sky and a glorious sun, for English River, the first Indian post where treaty money is paid under Treaty No. 9.

This post is at the confluence of several large rivers and the English river, which wends its way about one hundred miles northwards where it empties into the expansive Albany river, this route being the one generally taken by water travellers to Fort Albany on James Bay from the line, Pagwa on the Transcontinental being the point of embarkation.

ENGLISH RIVER

On leaving Remi the pilots steered a course northerly of and paralleling the railway to Kabinagami and Pagwa rivers, then down the valleys of these serpentine waters to English River post, reached at 11 a.m.

The acquaintance made by the commissioners last year with the genial and hospitable representatives of the trading companies, and with the energetic Anglican clergyman, were renewed. Friday and Saturday, July 4 and 5, were spent in paying treaty money and considering certain submissions of interest to the Indians. Addresses were given by the commissioners and the two pilots, whose recitals of their oversea experiences, in the Great War, with courageous Canadian volunteer Indians, were eagerly received. Over one hundred gathered, there being present a number from the Fort Albany band.

Dr. Mitchell urged care and attention to their health and gave them in simple, intelligible language a number of "don'ts." It was gratifying to learn that Chief Faries, an Indian of exceptional interest, reported a very decided respect for law and order, the good counsel sympathetically given by the commissioners last year having been graciously received and faithfully followed.

Saturday, July 5, was impossible flying weather, the order of the day being heavy rains, low-hanging, black clouds, interspersed with sunny spots which were seized by the Treaty party, after formal work was completed, to instruct and entertain the Indians in artful pastime games and amusing tricks. Special mention in this regard should be made of mechanic Gauthier whose wizard tricks, not only at this but at other posts visited, which included the freeing himself from knotted rope entanglements, and modern handcuff bracelets, gave the Indians a real thrill and solid enjoyment and netted Gauthier the sobriquet of "Wendigo."

OGOKI

The inclement weather continued all Saturday night and until noon Sunday, July 6, when a hop-off was made for Ogoki. The visibility was poor and the weather threatening, in consequence of which, along with an unexpected landing on the Albany river below the forks, arrival at Ogoki was delayed until 3.45 p.m.

Good lodging was secured at the home of the Hudson's Bay Company's factor, Mr. Anderson, who with his daughter courteously received the party and eminently supplied its needs.

On Monday, July 7, the commissioners arose at 7 o'clock and immediately after breakfast made payments to one hundred and forty-six Indians. The paymaster made a generous distribution of clothing and certain useful articles

to old widows and dependent old men, Dr. Mitchell the while treating those requiring medical attention and dispensing drugs. The work was rushed to completion at 3.30 p.m., and there being a welcomed rift in the cloudy sky the party took for Fort Hope, and reached there at 4.45 p.m.

FORT HOPE

Fort Hope on the Albany river was, up to the year 1912, the most northerly point in the province of Ontario, but the pushing back of the frontier and extending the boundary to the bay has tended somewhat to give this post a modern aspect and with the advent of the aeroplane and the establishment of an air base and a wireless station by the Department of Lands and Forests of Ontario closer communication with the outside world has resulted. Fine buildings have been erected by the Hudson's Bay Company and Revillon Freres. An Anglican Mission is in charge of Rev. J. McDonald, a striking personality, while the school is presided over by his son, John. A Catholic Mission is periodically attended by Rev. Father Couture, O.M.I.

Members of the party were cared for at the trading posts, Mr. Flett, representing the Hudson's Bay Company, and Mr. Souter, Revillon Freres. Two Moth planes of the Ontario Air Force were met here, one in charge of Pilot Swartman from Sioux Lookout, and the other in charge of Pilot McCoy from Caribou.

After the evening meal baseball and horseshoe pitching were temporarily indulged in to the delight and satisfaction of the Indians present. Conferences with the trading companies at night touching on their relationship with the Indians were held.

Early on the following morning, Tuesday, July 8, the commissioners crossed the river to the clean and well prepared Council House on the reserve, where all day until 6 p.m. was devoted to paying treaty money. During payments several pagans, members of this band, appeared and it did not require a very discriminating eye to recognize this type. Less careful in their dress, cleanliness and manners than the Christian Indians they at once appear apart; even in their movements their primitive and unchristian customs are evident. One couple, claiming marriage according to pagan rites, by the great disparity in their ages, he being but 40 years and she over 80 years old, added a zest, if not a sentiment, to the occasion.

Tuesday evening, July 8, Dr. Day of Sioux Lookout arrived to substitute Dr. Mitchell who was called home.

Treaty payments were completed by noon Wednesday, July 9, and in the afternoon over two hundred and fifty Indians assembled on the south side of the river and patiently listened to addresses by Commissioners Cain and Awrey, the former emphasizing the necessity of complying with the fire protection and game laws, and the latter counselling the Indians on the need of thrift and additional display of energy by reason of the limited success in the chase the past year.

During the day the plane officials were busily engaged in making important repairs to plane No. 113, and overhauling the wiring on both. The pontoon of plane 113, while anchored in what was believed a safe zone, was damaged by Indians and half-breeds who were racing in outboard motor canoes, one of which sideswiped the plane and ripped the bumper several inches. For this culpable negligence they were severely censured by Commissioner Cain, an eyewitness of the occurrence.

LANDSDOWNE HOUSE

Leaving Fort Hope on Thursday, July 10, at 1.50 p.m. the planes under fair weather proceeded to Lansdowne House about 60 miles due north. This point is situated on Attawapiscat lake, the headwaters of the great river bearing the

same name that extends northerly and easterly over three hundred miles to James bay. It was at this point last year where fifty members of the Trout Lake band were enrolled and admitted to treaty, a number of them being present again this year. Commissioner Cain, who through illness last year was not present at the enrollment, desired to check them up and personally vouch for them.

Excepting the Trout Lake Indians mentioned, all those that encamp at Lansdowne House are members of and constitute practically fifty per cent of the Fort Hope band. As a concession to them they were privileged last year to elect from their number two of the four councillors to which the band by law is entitled, the other two being elected at Fort Hope. A request by the Lansdowne Indians to be granted a reserve in the vicinity of this post was refused as a reserve of complementary size had been regularly allotted at Fort Hope years ago, duly surveyed and its approval already recommended in the commissioners' report of 1929.

Dr. Day administered to the Indians on Friday, July 11, while the commissioners paid annuities and considered grievances. In the evening a general gathering took place, the commissioners and the doctor giving the usual admonitions. The Indians cast aside that reserve, more or less a characteristic trait, and freely asked questions pertaining to their welfare and evinced keen interest in the proceedings. After the meeting a short program of sports was run off for the benefit of the Indians, a number of whom, as previously remarked, had been admitted into treaty last year and were expecting some novel entertainment.

The following program of events was merrily disposed of:—

Event	Prize
Girls race—14 years and under—50 yards.....	(1) Brooch, all others—candies.
Boys' race—14 years and under—50 yards.....	(1) Soap and comb, all others—candies.
Girls' race—15 years and under—75 yards.....	(1) Compact,
	(2) Comb.
Boys' race—15 years and under—100 yards.....	(1) Mouth organ,
	(2) Soap and comb.
Sack race—Men and boys—50 yards.....	(1) Belt,
	(2) Comb.
Three-legged race—boys—50 yards.....	(1) Tie,
	(2) Cup.
Relay race—100 yards.....	(1) Chocolates,
	(2) Chocolates.
Tandem race—100 yards.....	(1) Comb,
	(2) Cigarettes.
Broad jump—Men.....	(1) Cigarettes,
	(2) Chocolates.
Oldest Indian—(aged 85).....	Large pipe,
Oldest squaw—(aged 80).....	Large coloured handkerchief.

All the prizes were donated by members of the party and purchased at the stores of the two trading companies.

Inspector Anderson of the Hudson's Bay Company was paying an official visit to the post while a young Mr. Smith had charge of Revillon Freres where the party was housed.

Saturday, July 12, offered very disagreeable weather, rainy, cloudy, windy, the wind having shifted several times during the day and for a long spell holding a velocity of 40 to 50 miles an hour. The air was chilly and the Hudson's Bay blanket in demand at bed time.

OSNABURGH HOUSE

On Sunday morning, July 13, at the first favourable moment the planes started for Osnaburgh on lake Joseph and arrived at 12.40 p.m. This post was the scene last year of the fatal accident to treaty plane WX, which crashed and sank in the lake carrying to his death an employee of the Hudson's Bay Com-

pany, one Sandy Morrison, upon whose grave in the little Indian burying ground upon the hill, beside the forlorn and neglected looking church, the commissioners upon arrival placed a wreath of native wild flowers as a silent tribute to Sandy's memory, and a submission to death's inescapable call.

Here was met the new factor of the post, Frank Harvey Aldous, an estimable English gentleman who has faithfully served the Hudson's Bay Company for thirty-five years, and who in less than one year has worked a noticeable transformation in the appearance and arrangement of the post and has radiated amongst the Indians an undeniable influence of cleanliness, neatness and thrift.

Mrs. Caron, another long and highly respected employee, a gracious lady, proved an excellent hostess and splendidly satisfied the most epicurean tastes of the inner man.

For the courtesy, attention and extreme hospitality shown by these officials the commissioners express their gratitude.

Pursuant to the practices of the white man in dealing with Indians under Treaty No. 9, the commissioners declined, though requested by some, to pay annuities on Sunday, but met the Indian worshippers on their reserve on the south side of the river and with Dr. Day delivered addresses applicable to Sunday service.

All day Monday, July 14, bad weather conditions limited the work to individual interviews and prevented the planes from proceeding to Sioux Lookout, where electrical overhauling of engines and the purchase of supplies were necessary.

During the morning of Tuesday, July 15, Commissioner Cain assisted Paymaster Awrey in paying annuities and determining cases submitted by the Indian Chief.

SIoux LOOKOUT

At noon the planes with Commissioner Cain left for Sioux Lookout, landing at the provincial air base within one and a half hours. Needed adjustments were made to the planes and certain replacement parts, sent from Ottawa at radio request of Officer Harding while at Fort Hope, were obtained. The night was spent in Sioux Lookout where Commissioner Cain purchased essential provisions to tide the party over its prospective and uncertain trips to Nikip and Sandy lakes in the interior and western portions of the Patricia District.

A heavy storm occurred at Sioux Lookout and a take-off was deferred until 2 p.m. Wednesday, July 16. Dr. J. O'Gorman, in substitution for Dr. Day called home, returned with the party to Osnaburgh House.

During the absence of the planes at Sioux Lookout Paymaster Awrey finished payments at Osnaburgh where Dr. O'Gorman upon arrival proceeded to the dispensary, conveniently provided by Mr. Aldous, and busily engaged himself until dark.

The next two points of call, Wendigo river, where it empties into Nikip lake, and Sandy Lake Narrows, had given the commissioners some concern. Nikip Lake was the fortuitous meeting place last year of the representatives of an Indian band with Commissioner Cain, whose forced landing due to diminished gas supply attracted the Indians encamped on the opposite side of the lake, about eight miles distant. The details of such meeting are recorded in the commissioners' report of last year.

These non-treaty Indians, supposed members of the Trout Lake band, had failed to appear for enrolment at Trout Lake in 1929, and while Commissioner Cain had advised them to report this year at Trout Lake it was subsequently deemed advisable for their tranquility of mind and future happiness to aggregate them into a separate and distinct band, meet them at a given spot, their own encampment, duly admit them to treaty and allocate them a reserve at the site tentatively selected last year by the Commissioners, or at such other one satisfactory to them, and to this end the commissioners had to direct themselves.

Added also to the agenda for 1930 was the question of providing a reserve for the Deer Lake Indians who are subject to Treaty No. 5 though resident at Sandy Lake, Northeast of Wendigo river and near the Manitoba boundary.

As the exact locations of these two Indian encampments were unknown to the pilots, and the supply of gas was a determining factor, it was decided to go to Wendigo via Kapikik, the most northerly air and radio base in Ontario, ideally appointed from both a practical and aesthetic point of view, and there refuel and notify Ottawa of intentions as the following three weeks would take the party out of further touch with the outside world.

Osnaburgh was left on Thursday morning, July 17, and Kapikik reached at 11.35. After refuelling a dead calmness prevented a rising and all luggage, except emergency rations and the money bag, was unloaded and deposited on the sandy beach for a return trip. Thus lightened the planes took the air and succeeded in picking out and arriving at the Indian encampment on the west side of the Wendigo river, about one-half mile above the point of its entry in Nikip lake, at 4.10 p.m. After a hurried lunch the crew left for Kapikik again to secure the luggage and then to proceed to Trout Lake to remove uncertainties of fuel supplies at that post.

WENDIGO RIVER AT NIKIP

The Hudson's Bay Company, through its outpost factor of Cedar Lake, John Wesley, prepared an office in the form of a new tent, 10 feet by 8 feet, for the commissioners, where the Adhesion was signed and the Indians enrolled. Two additional tents met the dormitory requirements, while an improvised table of rough logs and hewn pieces of spruce, supplemented by a rickety bench for adornment rather than practical purposes, satisfied refectory needs. That night all the Indians, 176 in number, headed by their chief, were summoned and addressed by the commissioners, who fully explained the purpose of their coming and sought the reason for the non-appearance of these Indians at Trout Lake last year. Desired band independence and traditional respect for the counsel of their former chief, now deceased, who urged them not to go that distance until treaty contract was made but rely on the Government's sympathy for and interest in them, accounted for their absence.

As these Indians with their squaws and papooses squatted around they presented a picture, in comparison with other bands, of unkempt, ill-clothed, rather penurious and distressed people. Their appearance indicated limited success in the hunt during the past year and their enrolment as wards of the Government should conduce to their improvement. Notwithstanding their seemingly underprivileged conditions their health was above the average, in which connection it is worthy of note that of all those appearing before Dr. O'Gorman for treatment not one was found with a tooth cavity, thanks presumably to the lack of sugar and sweet-meats.

In some respects these Indians are located at a point which is the most inaccessible of any Indian post in the province. To bring in supplies from the line involves a return trip by canoe of twenty to twenty-five days—the route being via Bucke on the Transcontinental and Osnaburgh on lake Joseph. A free trader from Osnaburgh occupied twenty-one days, making fifty-one portages, in coming to the post at treaty time to dispose of a few hundred dollars worth of goods.

Flour at 40 cents a pound, tea at \$1.25, pork at 70 cents, rice at 40 cents, and other staple articles usually used for table purposes by the white man, are proportionately high and if the hunt is poor and the fish scarce the Indians must necessarily restrict their requirements and depend upon the trading companies for their rations or grub staking.

The commissioners adopted the same method taken last year at Trout Lake and had the band select from their number certain leaders. Six met the com-

missioners in the "Administration Hall" on Thursday night, July 17, and for several hours discussed the terms and conditions of Treaty No. 9, to which they desired admittance.

The commissioners, after a thorough explanation of the treaty was given, urged the leaders to present the case to the entire band and not to agree to a single proposition unless it was clearly understood, since it was the desire of the King's representatives to report understanding and unanimity amongst the Indians. John Wesley, whom they knew well and in whom they had confidence, acted as interpreter and being a graduate of the Winnipeg Indian school was quite competent.

Next morning, Friday, July 18, the leaders again met the commissioners and submitted many questions which were fully answered, after which they intimated readiness to sign the Adhesion. The Indians manifested the keenest interest in the mounted map used by the commissioners, and which was hung upon the flag pole of the "office."

The commissioners first signed, followed by the leaders—Apin Kakepeness, Jonas Wasakimik, Samuel Sawanis, John Quequish, Patrick Kakekayash and Senia Sakechekapow—each of whom used the Indian syllabics. The signing was witnessed by Dr. O'Gorman and John Wesley and a snap shot of the occurrence, showing the signing table with the chief by the side, forms part of this report.

The entire band, numbering 176, were then enrolled, all Indians personally appearing with their wives and families. The names and ages of all were recorded and payments of gratuity and annuity made. No less than seventeen widows were enrolled, ten per cent of the whole band. While certain gewgaw articles, such as cheap rings, to satisfy the curiosity and primitive fastidiousness of the squaw, comprised part of the purchases of the Indians from the traders, the large percentage covered the essential ones of food and clothing.

So far removed from the line are these Indians that many of them have seen but few white men. No itinerant missionary visits this encampment, although there is a simple building of rough logs, with roof partly covered with crumpled tar paper, used for Christian service, two lay Indian Gospel readers taking charge. The splendid framework of a large church had been constructed out of hand cut logs but the reserve for the band having been chosen elsewhere the building may not now be completed. The Anglican missionary, Rev. Mr. Garrett of Trout Lake, visits Weagamow Lake, a day's journey from Wendigo, annually and some of these Indians attend Service there.

To these simple Christian people, solely dependent upon their aboriginal vocation, the chase, for their existence, the seaplane, the great "flying bird," was a source of interest. Even after feeling and examining it and observing it come through the air they were incredulous, concluding as it lay there—inanimate, like unto the bird that so often falls a victim to their aim, that it could never take on life again.

Up to the signing of the Adhesion, while claiming certain allegiance to the Trout Lakers, they were generally designated Wendigo and Round Lake Indians, but owing to the levity and humorous contempt in which the word "Wendigo" (Wandering Spirit) is regarded by the other bands within this expansive territory, and to the fact that Round Lake is not their summer rendezvous, they chose the name "Caribou Lake," where they selected their reserve, it being two days' travel eastward from their Wendigo encampment.

According to custom the Indians were given a feast, sufficient supplies such as flour, tea, lard, etc. having been procured from the Hudson's Bay Company. The men and boys, contrary to the expectations of the white men, made the bannocks for the feast, which consisted of these palatable cakes with fat pork juice and lard, tea and candies, all being spread before the squatting band upon the green sward, several of their leaders acting as hosts and standing with bowed heads in the offering of grace before partaking of the viands set before them

Elections were held and resulted in Apin Kakepeness being chosen chief and Samuel Sawanis and Senia Sakechekopow, councillors. The elected chief was the Indian who met Commissioner Cain last year, and proved such an enigma. Possessed of an attenuated frame and melancholy face he viewed everything, and surrounded himself with a veil of apparent mystery, not penetrated even by the enthusiasm of his followers, all of whom, including the children, congratulated him by shaking his hand.

The new council were presented with the Union Jack and appropriate medals, the significance of these having been explained by the commissioners.

Realizing the importance of a reserve they had carefully discussed the subject amongst themselves prior to the commissioners' arrival. Based upon their aggregate membership they are entitled to $35\frac{1}{4}$ square miles, which, with the approval of the commissioners, they selected on the south shore of Caribou lake, slightly to the left or west end, so that ample frontage of a somewhat extended bay will be included, the dimensions to approximate 8 miles in length by 4.4 miles in width.

The commissioners and the doctor concluded their work on Friday evening and patiently awaited the return of the planes which, however, did not appear on the horizon until Saturday, July 19, at 8.10 p.m. On arrival the pilots reported a safe landing at Kapikik on Thursday evening, impossible flying weather on Friday, a take-off on Saturday for Cat Lake for refuelling purposes, thence northeast to Trout Lake to investigate gas cache. Here to their amazement, and to the possible frustrating of plans, they found over eighty per cent of the R.C.A.F. gas, that had at extreme cost been freighted from Hudson bay up the Severn river 250 miles, a total loss through leakage, due to faulty packing. This criminal negligence involving such a loss, and placing pilots and passengers in grave situations, forced the relaying of gas from Cat Lake, a distance of 175 miles, and it was on the trip down from Trout Lake on Saturday they called at Wendigo with certain luggage and camera supplies of the commissioners, having left the mechanics at Trout Lake to reduce the load. Darkness setting in earlier than usual at Wendigo, the hop-off for Cat Lake was deferred until Sunday morning at 6 o'clock. The planes returned at 5.15 p.m. the same day, but because of the unpropitious weather, and the indefinite description of the next stopping point on elongated Sandy Lake, the trip there was left for Monday.

A band of Indians residing in the vicinity of Deer Lake within the territory included in Treaty No. 5, signed Adhesion to said treaty on June 9, 1910, and under its conditions were assured a reserve in the proportion of 32 acres per capita. At this time the territory formed no part of the province of Ontario, it being then part of the Northwest Territories. A final selection of the reserve had not been made and although the band in 1910 resided in the vicinity of Deer Lake the members have since changed their abode and are now in larger numbers resident about Sandy Lake, situate within territory covered by the commission under which the undersigned commissioners are functioning.

In 1910 when this band was admitted they numbered 95, augmented the year following by 78 Indians transferred from the Indian Lake band resident in Manitoba. These numbers have now increased to 332 and as the Island Lake Indians have been allotted their reserve, and have had it duly surveyed on a basis excluding those transferred to the Deer Lake band, the latter are now entitled to a grant.

Under the Ontario Boundaries Extension Act, R.S.O. 1912, chapter 40, provision is made whereby Ontario will recognize the rights of the Indian inhabitants in the territory added to and now included in the province by the said Act. These Deer Lake Indians resident in such added territory desired their reserve.

In pursuance, therefore, of an appointment made by the commissioners to meet representatives of this band at an indefinitely described point towards the

west end of Sandy lake, the planes took off from Wendigo at 7 a.m. on Monday, July 21, John Wesley, as interpreter, accompanying the party.

SANDY LAKE NARROWS

The distance being less than anticipated and the waterways somewhat different in size and shape from those shown on maps the encampment was reached in about one hour and was found situated at the "Narrows," a stretch of water lying between Sandy lake and lake Oo-pe-te-quah (little, short, squat, woman). The entire band had been waiting for some days for the treaty party but the majority had left, shortly before the arrival of the commissioners, for Deer Lake where they receive their annuities under Treaty No. 5.

About 75, headed by their striking looking Chief Fiddler, arrayed in his official uniform with his large medal bearing the impression of the late King Edward VII, his prided insignia, presented their claims. The chief predicated his submission by asserting his intention to speak the truth and humbly petition the King, through the commissioners, to grant his people their belated reserve at the very site where the white men then stood with the red men.

The chief briefly reviewed the circumstances above recited and the commissioners concurred in the site selected but explained that the size could not be determined until an examination of the regular annual returns at Ottawa would satisfy the commissioners that their members transferred from the Indian Lake band were not already beneficiaries under any other reserve selection. Expressing the utmost confidence in the commissioners the Indians were assured that justice in respect of their reserve would no longer be deferred.

Having regard for the number in the band, some 332, verified by official records, the commissioners hereby approve of a reserve at this point, the Narrows, consisting of 10,624 acres, or approximately 17 square miles, to be laid out in a rectangle having a width of at least 3 miles with sufficient depth to satisfy the aggregate requirements, the understanding being that the chief, or his nominee, shall be present at the time of survey to indicate on the ground the location desired.

With rousing cheers from the Indians the commissioners said "Adieu," hopped into the planes and with the advantage of a tail wind returned to Wendigo in forty minutes.

John Wesley left for Cedar Lake by canoe and the planes loading up with part of the gas relayed from Cat Lake started for Trout Lake and arrived at 3.30 p.m.

TROUT LAKE

The commissioners, learning of the illness of Chief Beardy of the Trout Lake band, immediately called upon him and extended sympathy. The Indians here wholeheartedly as last year received the party. Rev. Mr. Garrett and Mrs. Garrett, of the Anglican Mission, graciously received the commissioners with an invitation to be their guests during their stay at the post, which was reluctantly declined as reservations had already been made at the Hudson's Bay Company.

The new factor is J. F. Kighley, an energetic, genial and capable official, having as his clerk Horace Flett, son of the Fort Hope factor. The company have extended their improvements by the erection of new buildings, including an enlarged store, while the Indians have several small houses for occupancy in the summer. Several patches of potatoes were being cultivated by the Indians, the clay soil being rich and productive. The fine garden of vegetables at the company's house should be an encouragement to the Indians to cultivate the soil. A pit saw owned by the company and operated by two industrious Indians supplied building needs at the post.

Tuesday and Wednesday, July 22 and 23, were devoted to paying annuities, holding conferences, with the chief and councillors and enrolling a few delin-

quents from last year. The total number paid was 638. Twenty births and sixteen deaths occurred during the year. The health of the band was found by Dr. O'Gorman to be very good and apart from tubercular tendencies, more or less characteristic of the race, no pronounced organic troubles were found. The commissioners wish to emphasize the impression gained last year on admitting these Indians to treaty, that is, they evince in the main an intelligence and radiate an exultant joy of life that if existent in any other band met on the trip is obscured by a native stoicism and excusable indifference. The Indians challenged the whites to a football game, itching to revenge the defeat they suffered last year, but the tiring rains intervened and shattered their hopes.

Trout Lake Post was opened by the Hudson's Bay Company in the year 1793 and the barter in furs still continues with these Indians, numbering 638, of whom 627 were enrolled last year and 9 this year, with a natural increase of only 2. Fifty of them usually make Lansdowne House their camping grounds where they are paid with members of the Fort Hope band.

A feast, postponed last year due to the lack of supplies, was provided by the commissioners but the distressing rainy weather centred the preparations in the chief's scantily furnished log dwelling, which served as the "historical hall" last year, and thus the pristine glory and native glamour of outdoor open camp fire and teepee bakings were absent, although the enjoyment in partaking of the unusual delicacies was undiminished.

The Indians exercised certain concern regarding the survey of their reserves, three in number, selected last year, the fourth descending now to the Lake Caribou band, who selected it at Caribou Lake rather than at Round Lake where it had been recommended by the Trout Lake Council and tentatively accepted by the commissioners. Last year the non-appearance of the Wendigo and Round Lake Indians (now Lake Caribou Indians) resulted in an arrangement by which their reserve was to be the difference between the aggregate area to which the whole band was entitled and the area of the three reserves selected and referred to in the commissioners' report of last year. However, when these were selected the subsequent enrolment of fifty members at Lansdowne House was not anticipated, and consequently the area covered by the complete allotments was less than the band is entitled to under the treaty.

On an enrolment of 627 the band should obtain 125.4 square miles, or 14.4 square miles in excess of last year's allotment. To obtain this means an enlargement of Reserve 1, Trout Lake, from 70 square miles to 84.4 square miles, covered in the summary of this report.

Through an error the dimensions given in last year's report for Reserve 2, Sachigo, were incorrect, although the area, 14 square miles, was correct. These dimensions are now amended so that the block shall be $3\frac{1}{2}$ miles wide by 4 miles long. A rough description pending final survey is included in the summarized recommendations contained herein.

To allay the evident anxiety of the Trout Lake Indians respecting their reserves the commissioners gave them verbal assurance that a strong recommendation would be made for the taking of early adequate measures to have the areas approved and duly surveyed.

The commissioners visited the Anglican Mission school over which the painstaking Mr. Garrett presides, inspected over one hundred Indian children, listened to their splendid singing and freely paid tribute to the pupils and teacher on their remarkable showing. With only a few school weeks each year to their credit these Indian children show a keenness to learn and respond readily to the efforts of the teacher.

FORT SEVERN

Work at Trout Lake was finished at 11 a.m. on Thursday, July 24, when the party sought the air route once more and headed for the first Hudson bay objective, Fort Severn, down the Severn river 180 miles by air from Trout Lake,

and over 250 miles by canoe. This post was circled at 12.50 p.m. and the party for the first time gazed from an elevation of five thousand feet upon the great inland sea that sweeps the northern shores and affords the Hudson's Bay Company access to lonely posts, including Fort Severn, it had established and in active operation in the latter part of the 17th century when the Bourbon Kings were trying to plant the Fleur-de-lis in the western wilds.

The post is on the west side of the river about four miles from where it empties into the Hudson bay. The few buildings erected, including the inevitable store, freight shed, factor's residence and small log houses that shelter the limited employees, are placed on level ground back some distance from the bank which rises thirty to forty feet from the water's edge. Accommodation was secured at the company's house, the factor being George Third, a competent and experienced official with an obliging clerk Henry Mann. The only other white man here is Harold Bland, a former employee of sixteen years' standing with the company, now a trader in his own right.

Dinner was served within an hour after arrival and consisted in part of young duck, a delicacy much appreciated by the partakers whose absence from the freshness of things for some time made the offering the more acceptable.

The weather being rainy and stormy the Indians were asked to assemble on the morrow. At nine o'clock Friday, July 25, some seventy-five, the entire membership, selected their leaders, three in number, George Bluecoat, Mumzie Albany and Saul Crow. Charlie Gray, a half-breed, acted as interpreter.

In the early stages of their conference with the commissioners the Indians under their natural restraint, or childish reserve in the presence of white men, displayed some hesitancy but gradually on realizing that the commissioners were present as friends to give that which they asked they took on an air of responsiveness and freely talked. A frank expression of ideas and opinions was exchanged, and the Indians who showed an understanding of Treaty No. 9 were satisfied with the points presented and retired for final instructions from the other members, who gave the leaders general direction to accept Adhesion. The official document was signed by the commissioners and the leaders and witnessed by all the members of the Treaty party and George Third, H. F. Bland and Henry J. Mann.

Seventy-five were then enrolled, these comprising 15 men, 15 women, 22 boys and 23 girls. Each was paid \$4 gratuity and \$4 annuity.

At the elections, following payments, George Bluecoat was elected chief and Mumzie Albany councillor, and to each was given a medal. The Union Jack was unfurled and accepted by the chief as a symbol of "law, order, peace and protection."

Their reserve, containing 15.2 square miles, was, with the approval of the commissioners, after due consideration, selected at the mouth of the Beaverstone river, where it joins the Severn river, and is to have a frontage of 1.5 miles on each side of the Beaverstone and a depth of 5 miles more or less from its mouth, the river being shown on map No. 20a, issued in 1926 by the province of Ontario, as Beaverstone, although it is called "Castorum" by the Hudson's Bay Company and "We-ke-mow" by the Indians.

The accustomed feast was provided and their "table" display was more palatable in appearance than that observed in certain other bands.

The hunt during the season just closed was nearly equal to that of the previous one, the predominant skins being beaver and otter. White fox, of which there has been a decided scarcity for several seasons, is again appearing and prospects for a good return are bright.

Goods at this point, because of lower transportation charges, are much less than at Trout Lake, flour for instance being only \$20 a cwt. as against \$38 at the inland post. Lake trout and whitefish are available, though not in abundance, at high tide. They generally follow the ice and go with the spring freshets to the bay, returning the last of September and October to the upper stretches of

the river, their spawning beds. This treking movement accounts for the obvious scarcity of fresh fish during the period of summer encampment. Speckled trout are procurable in certain fresh water streams a few miles from the post.

Commercial communication of Fort Severn with the outside world is by schooner of the Hudson's Bay Company, which calls twice a year. The *Fort York* from Churchill was eagerly awaited at treaty time but did not materialize—neither an outlook perched upon the roof of the factor's house, nor a scanning from the departing planes, having sighted the longed for cargo carrier.

Friday evening, July 25, saw the completion of work and early Saturday morning was fixed for a take-off to Winisk. Low tides prevented this, the planes being high and dry at the appointed time. They had been tied to shore due to the unsafe anchorage in deep water where the slippery clay bottom failed to hold the light anchors of the planes. Tides and variable winds are two important factors demanding the attention of airmen, who contemplate the use of Fort Severn as a port of call. Timely action on the part of the crew averted a serious mishap to one of the planes that had, with the outgoing tide urged by a wind, drifted from its anchorage down towards the mouth of the river.

Bad weather detained the party until Sunday, July 27, at 3.20 p.m. Pushing off for Winisk the planes skirted the southern shores of Hudson bay, the approach to which is a low-lying flat muskeg area, the last wash of myriads of streams and important large rivers draining extensive sections of the Patricia portion of the District of Kenora.

Countless wild ducks, several white whales and distant ice floes, were visible from the planes. Poor visibility and an approaching dense fog somewhat disconcerted the pilots after forty minutes of flying. As the fog thickened and lowered the planes were lost to the view of each other and an unusually low altitude was taken. An east wind speedily forced the fog into the face of the planes, now completely enveloped. A forced landing on the Winisk river near its mouth was decided upon and while the pilots had limited facts of the hazardous landing conditions certain data accompanied by a map had been obtained at Fort Severn and considered authentic enough to support an even chance on choosing this, in an emergency, as a safe alternative landing spot. To have waited another minute in the case of plane 113, and likewise 114, would have been flirting with grave danger, if not death, and Flight Lieutenant Harding turned the plane's nose into the terrifying fog up the river and somewhat jarringly though safely landed at the foot of long, flat rapids, the occupants of the plane expressing keen anxiety concerning their companions lost to view for some time. But within three minutes the fog was again pierced and down bolted 114, in a similar fashion, to a point perilously near 113. At that moment the flood gates of heaven opened and a lashing wind set up. As the fog lifted and the downpour lessened, only to be repeated with double force and fury a few minutes later, an opening in the fog between the points of two islands occurred and the party with a sigh of relief discerned, dimly silhouetted in the background on the mainland a few miles up the river, beyond the rapids, the little cross tipped Catholic Mission and the flag-tipped official residence of the Hudson's Bay Company.

On the left were faint outlines of teepees from which there shortly issued several agile Indian braves who though never having seen nor heard the flying fire canoe were aroused by the swish of the air paddle, the whirr of the motor, and rushing down the sticky, slippery, slimy clay banks, leaped into their responsive transports, with their trusty blades, long spruce poles and tracking ropes, and were soon shooting the rapids to satisfy a keen longing to gaze on the expected flying machines and to appease their minds troubled by the thought that a landing at this location spelt disaster.

These Winisk Indians were joyfully welcomed by the commissioners, who with Dr. O'Gorman were paddled, poled and tracked up the treacherous rapids some four miles to the looked for post. The company's factor, John Harris,

courteously received the Government officials and accorded all *carte blanche* possession of his tidy though restricted quarters. It was he who had mapped out a landing course and planted buoys for safe anchorage and take-off for sea planes about five miles above the post, which site later on the pilots were forced to use and record as the only safe one for this post.

Winisk post presents a dreary and depressing picture, situated as it is in a lonely position on the west bank of the Winisk river about four miles south of Hudson bay. This river takes its rise within a few miles of the headwaters of the Attawapiscat river and flows northerly and easterly three hundred miles into Hudson bay; like other rivers flowing into the bay it is subject to tidal conditions and has at its mouth a series of deltas that are being annually transformed. The clay soil with the constant lashing of the tidal waters and the recurring spring floods produces a handicap to shore activities.

The approach to the post both from up and down the river is via rapids navigated with difficulty only by the primitive though indispensable canoe.

Early Monday morning, July 28, the commissioners summoned the Indians, 85 in all, and hoped to conclude the work in order to take off on Tuesday. The band chose three leaders to act in treaty negotiations, Xavier Patrick, John Bird and David Sutherland. The interpreters were Rev. Father Martel and William Oman. These Indians possessed more knowledge of the terms and conditions of Treaty No. 9 than many members of other bands who had been admitted twenty-five years ago, and consequently discussions were shorter and explanations fewer. When the commissioners attempted to elucidate a certain point they were met by the interruption politely made, "We know perfectly all about this treaty."

Adhesion was readily signed by the contracting parties, the commissioners first and leaders second, followed by the witnesses, Rev. L. P. Martel, O.M.I., J. Thos. O'Gorman, M.D., John Harris, Hudson's Bay Company, and R. T. Wheeler, Clerk.

Elections resulted in Xavier Patrick as chief and David Sutherland, councillor. Dr. O'Gorman presented the Union Jack to the chief, appropriately explaining its significance, and the commissioners pinned upon the elected ones their medals and counselled them in divers matters.

A feast of ample proportions was tendered them but before partaking, these humble teepee inhabitants, with a Christian faith, approached the missionary requesting that they gather in God's Name and thank Him for all His goodness and seek His blessing.

Although poor in appearance and limited in possessions they did not complain. They found their means of sustenance while camping at this forlorn post sorely restricted. Fish was scarce, provisions were not in plenty and the general condition of the Indians demanded their early return to the bush where they could gain a livelihood.

A reserve, comprising 17 square miles, was selected at the old abandoned outpost of the Hudson's Bay Company up the Winisk river at its junction with what is known as the Asheweig river. This old outpost was formerly called "Sousahagen," by which name the Indians now identify Asheweig river.

The reserve shall be so laid out as to comprise a width of three miles, or $1\frac{1}{2}$ miles on each side of the west branch of the Asheweig river where it empties into or joins the Winisk river, and to follow along both sides of the Asheweig river to a sufficient depth, approximating 5.66 miles, to afford a total area of 17 square miles. While the reserve is 150 miles from the post it was chosen, as claimed by the Indians, because it is said to be a well wooded and good hunting section.

All day Tuesday, July 29, torrential rains fell, filling to overflowing the conglomerate holes of the boggy flat about the post which offers a haven to the wearied Indian trader. Black, low-hung clouds encircled the high heavens and Old Sol himself seemed to have forgotten the powers of penetration, while the term "visibility" was lost from the airman's vocabulary. To fly on such a day

was impossible and the morrow offered but a faint hope for improvement as was indicated by Rev. Father Martel.

This missionary's humble bearing and quiet assurance greatly impressed the official party. From the moment of his greeting until his "au revoir" he was a human barometer predicting the weather, approximate or remote, with an uncanny exactitude. His philosophy, ripened by years of experience, and instinctive powers unostentatiously exercised, to discern and disclose the secrets of the elements, are of incalculable value to those who travel by paddle or plane. For the magnanimous treatment he accorded the party and the important data he so generously furnished the commissioners record their thanks.

On Wednesday, July 30, at 11.45 a.m., the party left the post for the planes below the rapids but found them high and dry upon the beach supposed to be unaffected by the tides. Slight repairs to the screws in the pontoons were undertaken and after exhausting efforts the crew, assisted by Indians, released and floated the planes in the hope of getting the advantage of a break in the weather for the trip to Attawapiscat on James bay. Unfortunately in the attempt to take-off from these waters, safe in appearance though treacherous in reality, damage was done to the pontoon of plane 113 and a delay of another day ensued. All luggage was unloaded and taken by canoe ten miles up stream to the safe anchorage previously selected by Mr. Harris. Repairs under the most adverse conditions were completed by Thursday night when the planes took off for the Harris buoys where they tied up for the night, another rainy one.

On Friday, August 1, at 8 a.m., the whole party, except the mechanics, who tented on the shore near the planes, left by canoe and occupied two and a half hours in reaching the machines, although the distance is about five miles, the intervening rapids requiring stiff paddling, poling and tracking.

A start for Attawapiscat was made at 11.45. A coastal course by the Hudson bay around cape Henrietta, and then down the west shore of James bay, as originally intended, was abandoned because of the hazardous fogs about the cape, where it was learned that up to the middle of August the ice packs render flying most uncertain. A cross-country flight was substituted and after about three hours over country, much of which was terrifying from the viewpoint of a possible forced landing, Attawapiscat was reached.

ATTAWAPISCAT

This post, situated at the mouth of the Attawapiscat river, has, like other James bay posts on the west side, the appearance of a modern community with its long line of coastal buildings, including those of the two trading companies, and the Anglican and Catholic Missions with the framework of a pretentious new church. An unique sawmill is operated by the lay brothers of the Catholic mission on a dual power system of gasoline and steam, this mill being the most northerly in the province of Ontario and used exclusively for the cutting of lumber for church purposes.

Rev. Father Belleau and his assistant, Father Langlois, ever solicitous for the welfare of the Indians, wholeheartedly co-operated with the commissioners.

The Attawapiscat Indians, formerly members of the Albany band, were detached from the latter and aggregated into a separate band at treaty payment last year. The number in all is 583, but of these only 100 met the commissioners, the others having decamped for their hunting grounds prior to the belated arrival of the planes.

Their chief, Xavier Chookomoolin, with the three councillors, Jacob Chookomoolin, Jacob Gull and John Nakooche, remained to receive the annuities for the absentees and to discuss the question of the selection of a reserve.

Commissioner Cain joined with Paymaster Awrey in paying annuities all day and at night conferred with the Indians on the reserve question, the determination of which, both in respect of its size and location, as indicated in the report of last year, was deferred until this year.

When Treaty No. 9 was signed the Albany band was admitted and a reserve, based upon the numbers then enrolled, 140 square miles, was selected at the mouth of the Albany river, duly surveyed by O.L.S. James S. Dobie, and shown on plan dated April 12, 1913, but never approved by the Ontario Government. The present membership of the Albany band (which excludes the Attawapiscat Indians formerly of the Albany band) is 688 and on an accurate mathematical basis they are entitled to 137.6 square miles, whereas the reserve they already hold, and over which they have exercised ownership, contains as above stated 140 square miles.

After mature consideration the commissioners deemed it advisable and in the interests, both of the Indians and the Crown, that such reserve remain intact and that the area to be allotted to the Attawapiscat band constitute the difference between the aggregate allotment to which both bands are entitled and the 140 square miles. The total membership of the two bands is 1,222, which, on the basis of one square mile for each family of five, is equivalent to 244.4 square miles, and this reduced by 140 square miles is 104.4 square miles, the size of the reserve allocated to the Attawapiscat band, or only two and a fifth square miles less than the exact mathematical requirement.

The Attawapiscat Indians accepted the arrangement with evident satisfaction and expressed thanks for the sympathy with which their requests were considered.

The reserve was selected at the junction of the Little Eqwan river and the main Eqwan river to start about $4\frac{1}{2}$ miles west of the said Junction and to consist of a block 6 miles wide and 17.4 miles long, extending down the main Eqwan and as far as possible including 3 miles on each side thereof. This inland site was justified by the Indians' contention, vouchsafed by others, that the coast trapping restricted mostly to foxes, had been lamentably diminishing during late years and the selected area would afford mixed trapping, good fishing and a centralized meeting point for the much scattered members.

Many questions, beyond the purview of the commissioners were presented, and while a sympathetic hearing was given the Indians they were referred to the resident Indian agent, Dr. Hamilton of Moose Factory, who had already paid the band an official visit and contemplated another at an early date.

The post factors, Mr. Ambrose and Mr. Graham, extended the usual courtesies to the party.

The elimination of so many individual annuity payments by making them through the chief and councillors, and the use of these representatives as the sole medium through which the reserve decision was reached, saved two days here and the work was completed on Saturday night, August 2.

Following church service on Sunday, August 3, the planes hopped off for Fort Albany and arrived there in less than an hour.

FORT ALBANY

The commissioners and Dr. O'Gorman registered at the Hudson's Bay Company, and the crew at Revillon Freres, Mr. Watt being the capable factor at the former and Mr. Horne at the latter.

The spiritual welfare of the Indians is amply provided for by the Anglican and Roman Catholic Missions. Rev. Mr. Northam, who last year was seriously ill and had to be transported by treaty plane to Sudbury for successful hospital treatment, warmly received the commissioners and during their stay at the post gave a delightful entertainment in the school house for the Indians and members of the party. By lantern slides and movie pictures he depicted "The Epic Indian Treaty Party Trip of 1929," and gave evidence of his whole-souled interest in his work.

The Roman Catholic Fathers, Belledeau and Decaire, are in charge of a large Indian school and have a convenient church and other substantial buildings. Due to spring floods their school and mission houses were flooded to the

tops of the lower stories in 1928, and in constant dread of a recurrence the fathers have undertaken the erection of a more commodious school in addition to hospital and farm buildings up the river on the opposite side, about four miles, on higher and more dependable ground. Here they have a creditable sawmill and have completed a cement foundation for the new school, 100 feet by 40 feet, and an addition for a hospital 40 feet by 40 feet. They are methodically proceeding towards the establishment of an industrial farm, where they hope in due time to train the Indian youths in the art of producing for self preservation.

The commissioners were grateful guests at a splendid dinner at the mission where fine green vegetables from the mission's garden, and beautiful fresh milk from the first cows seen on the trip, were served.

On August 4 over four hundred Indians were paid and hearings given to many concerning matters within the domain of the resident Indian agent. The same plaintive tones as heard at most of the posts were poured out here, that the hunt was poor, the fish scarce, and earning a living hard. Appeals for relief measures had been previously investigated and provided for by Dr. Hamilton.

The program at Fort Albany was concluded late Monday night and on the following morning, August 5, after waiting until 11 o'clock for a clear sky, the machines hopped off and, with a favourable wind, in fifty minutes reached Moose Factory, the last port of call, at the bottom of the bay.

MOOSE FACTORY

Moose Factory and Fort Albany have a wealth of history and tradition behind them. Captured and recaptured in the latter part of the 17th Century, in the hectic struggle between the English and French, these posts remain sturdy examples of the great business venture undertaken in 1670 and carried on for over two hundred and fifty years by the great Hudson's Bay Company, whose history is replete with romance, adventure and mystery, and whose extending ramifications in diverse departments of the economic world are traceable to their original trading with the Indians.

The prominence of Moose Factory, hitherto largely related to the fur trade and the company, is now being accentuated and made permanent. It is the proposed terminus of the extension to the Temiskaming and Northern Ontario Railway, a provincially owned and operated railway, the extension of which will be completed within a year.

The commodious buildings of the Hudson's Bay Company are situated on Moose island, extending along the bank of the river for a mile or more, with the Anglican church and Indian school at the upper end. In charge of this mission is Rev. James Blackburn, B.A., recently installed. His experience amongst and association with the Indians of Western Canada serve him splendidly. He showed a kindly interest in the visit of the treaty party and attended in person at treaty payments. Although there is no Catholic Mission here a worthy representative of the Oblate Fathers was met in the person of Rev. J. E. Saindon, who is general director of all the Order missions on the bay.

Revillon Freres have their post on the mainland of the main branch of the Moose river, their buildings paralleling the shore line back about 150 feet for over half a mile.

Law and order are preserved: the very presence of the Royal Canadian Mounted Police conduces towards a healthy respect for all that is fair and just.

The appointment by the Department of Indian Affairs of a resident Indian agent, a medical man of many years' standing, was a commendable one, and will in the opinion of the commissioners offer a solution for many of the Indian problems arising in and about James bay that are difficult to understand, much less solve, at such long range as is the capital from the scene of wholesale, if not always wholesome, demands. The Indians consider the appointment not merely a gallant gesture but a practical step in studying their needs at first hand. The boat furnished for the Agent's use receives the highest praise and is expected

in process of time to have an important effect for good upon the morale of the Government wards.

Tuesday afternoon, August 5, and Wednesday morning, August 6, were spent in paying annuities to the band members whose total registration is 360, a number of whom receive payments at other points whither they wander, some in search of work, others through a desire for shifting scenes, and a percentage to taste of the fruits of older civilization.

The developments during and resulting from the building of the railway to this historic post will, it is hoped, provide opportunities, to such of the Indians as are willing and industrious, of earning their livelihood and of gaining an independence which of late, due to the diminishing game in their narrowed area, is impossible.

By becoming virtually an inland seaport Moose Factory, with its prospective tourist and summer trade and the contemplated extensive construction work covered by the expanding program of the Ontario Government, will afford openings for the dexterous canoe man, the ready guide and the tourist's handy man.

An inspection of the Indian agent's boat, and a cruise of two hours in company with Dr. Hamilton, occupied the time of the commissioners until five o'clock when the party resumed its journey to Remi lake, which was reached in less than two hours on the evening of Wednesday, August 6, just two days behind the original schedule.

On Thursday, August 6, needed repairs to the engines were made by the mechanics, assisted by another member of the Royal Air Force, who fortunately was attached to the photographic planes operating in this region and temporarily stationed at Remi Lake. Friday morning, August 8, the planes took off for Trout Lake near North Bay, and, with floating mists at times harassing and low visibility, landed about noon. Immediately after dinner the party, excepting Commissioner Cain, moved off for Ottawa Air Port at Rockcliffe, and arrived the same afternoon, Commissioner Cain in the meantime having crossed Trout lake in canoe to North Bay, from which point he left for Toronto, reaching there Saturday, August 9, 1930.

Thus ended a decidedly interesting and important air trip which included practically a complete circuit of the hinterland of Ontario and an official visit to every Indian encampment along and north of the Albany river and on the coasts of Hudson bay and James bay in the province of Ontario, undertaken by the Department of Indian Affairs in the interests and welfare of the Indians inhabiting that extensive area.

PASSING OBSERVATIONS

It is worthy of remark that the general health of the Indians is good. Excluding tubercular trouble appearing in most bands their disorders were more or less negligible and their appearance in the main very respectable.

Contrary to occasional opinion, expressed by certain critics, magazine writers, feigned historians and pseudo experts on Indian matters, the early extinction of the Indian is not particularly evidenced in the Indians under Treaty No. 9, whose numbers approximate four thousand. These Indians during the last fifteen years, according to official figures, show a natural increase of fourteen per cent, thus disproving the theory that, because of alleged unchecked epidemics, the lack of ready applied medical science, with its modern conveniences and varied adaptations, extermination of this nomadic race is rapid. While the loss of close contact with medical and surgical science is regrettable though unavoidable, the periodic visits by officials of the Department of Indian Affairs, and their instructions on the care and cleanliness of the body and on general habits, the wide open spaces, exhilarating air and the carefree, enervating, nonchalant existence, are sufficiently compensating factors to maintain a fair balance in the scales of life and mortality.

Throughout the entire trip the party was accompanied by a medical man, sent under the directions of the Department of Indian Affairs. Dr. Mitchell was associated with the work from Remi Lake to Fort Hope, Dr. Day from Fort Hope to Osnaburgh, and Dr. O'Gorman for the balance, and the greater portion of the trip, covering all the newly enrolled Indians. Dr. O'Gorman proved a capable, painstaking and versatile advisor, not only in matters of his profession but in others of interest and value to the flying officials.

All three professional men have had a wide experience with Indians and their methods, though differing one from the other, of instructing and advising meet with a ready response.

MEANS OF LIVELIHOOD

Even in the far distant unsettled and unorganized sections the Indians, solely dependent upon the chase for a means of livelihood, are facing real trials in their efforts.

As civilization on the wheels of industrial and commercial progress pushes back the frontier the trapping fields are invaded and the product of the hunt diminished.

The commissioners, while fully cognizant of the continued perplexing problem confronting the Government, and students of sociology in respect of a satisfactory system of assimilation, always with due regard for the Indians' instinctive traits, believe that an intensive effort at a not too distant date should be made to teach the Indian to apply himself to the production of certain food-stuffs to provide at least for his own sustenance.

From observations during the last two summers the conclusions drawn indubitably point to the feeling that if the summer weeks, and in cases months, spent about the various posts by the Indians were devoted to the task of gardening small plots of ground upon the reserves the source of supply would be enlarged, the cry of starvation reduced, the demands made on the Government for relief lessened and a spirit of independence developed. Some church missions in the far-flung sections are already, with an extended vision begotten of a wide experience, admitting the advent of the day when necessity will compel the Indian to sustain himself partly by tilling the land, rather than attempting to do so wholly by the forest and stream, and are establishing farms in connection with schools, thus providing reasonable means of teaching and encouraging the Indian in cultivating and producing from the soil.

Unless and until the Indians affect some active interest in this direction they should be discouraged from loitering too long at summer encampments where their sources of supply are limited, and urged to return within reasonable time to their hunting grounds where they shall not face starvation.

GENERAL SUMMARY

The commissioners in conclusion respectfully submit the following recommendations, including certain of those covered by their report of last year:—

- (a) That the surrender made in the year 1905 by the Indians of such portion of the territory, then in the Northwest Territories and now within the province of Ontario, be approved and confirmed.
- (b) That the following reserves situated in the area referred to in the preceding paragraph (a) be approved and confirmed:—
 1. Osnaburgh, north side Albany river—53 square miles.
 2. Fort Hope—100 square miles.
 3. Marten Falls—30 square miles.
 4. Fort Albany—140 square miles.
- (c) That all the new reserves hereinafter roughly described and shown on accompanying map be approved and confirmed.

FOR TROUT LAKE INDIANS

Trout Lake.—Reserve 1, lying on the east and southeast shore of Trout lake, where it empties into the Fawn river, and on both sides thereof along the shore of said lake for $3\frac{1}{2}$ miles more or less and back therefrom to a distance of approximately 12 miles, always, as far as possible, at a distance of $3\frac{1}{2}$ miles from the shore on each side of the main channel of the said Fawn river, containing 85 square miles more or less.

Sachigo Lake.—Reserve 2, lying at the outlet of Sachigo lake where it empties into Sachigo river and extending on both sides thereof along the shore of the said lake $1\frac{3}{4}$ miles more or less and back therefrom to a distance of approximately 4 miles, always, as far as possible, at a distance of $1\frac{3}{4}$ miles from the shores on each side of the main channel of the said river, containing 14 square miles more or less.

Wunnumin Lake.—Reserve 3, lying at the southeast end of Wunnumin lake where it empties into the Winisk river, $4\frac{1}{2}$ miles in frontage by 6 miles in depth, the area to be largely to the south side, the north boundary to be so extended as to include sufficient area on both sides of the river, containing 27 square miles more or less.

FOR CARIBOU LAKE INDIANS

Caribou Lake, lying on the south shore of Caribou lake, slightly to the left or westerly end, so that sufficient frontage of a somewhat extended bay will be included, the dimensions to be approximately 8 miles long by 4.4 miles wide.

FOR DEER LAKE BAND

Sandy Lake Narrows, lying at the Narrows, being a stretch of water lying between Sandy lake and lake Oo-pe-te-qua-yah, the reserve to comprise 10,624 acres, or approximately 17 square miles, to be laid out in a rectangle having a width, so far as possible, of at least 3 miles with sufficient depth to satisfy the acreage requirement.

FOR FORT SEVERN BAND

Fort Severn, at the mouth of the Beaverstone river, where it joins the Severn river, $1\frac{1}{2}$ miles frontage on each side of the Beaverstone river and back 5 miles more or less from the mouth, the said river being shown on map No. 20 a., issued in 1926 by the province of Ontario, as "Beaverstone," although called "Castorum" by the Hudson's Bay Company and "We-ke-mow" by the Indians, containing 15 square miles more or less.

FOR WINISK BAND

Winisk, situated at the old outpost of the Hudson's Bay Company up the Winisk river at its junction with what is known as the Asheweig river, the reserve to be so laid out as to comprise a width of 3 miles, or $1\frac{1}{2}$ miles on each side of the west branch of the Asheweig river, where it empties into the Winisk, and to follow both sides of the said Asheweig river $5\frac{2}{3}$ miles, or such distance as will afford a total area of 17 square miles more or less.

FOR ATTAWAPISCAT BAND

Attawapiscat, situated at the junction of the Little Eqwan river with the main Eqwan river, to start on the main Eqwan river at a point $4\frac{1}{2}$ miles west of the said junction and to comprise a width of 6 miles, or 3 miles on each side of the river, and a depth down the river of approximately 17.4 miles, containing 104.4 square miles more or less.

SIGNATORIES AND WITNESSES AT WINISK

SIGNING OF ADHESION AT WENDIGO

TREATY PARTY AT REMI LAKE

GROUP OF INDIANS ENROLLED AT FORT SEVERN

- (d) That any mining claims staked out and recorded, within any of the above mentioned unsurveyed reserves, subsequent to the date of the signing of the Adhesion covering the areas, shall in all respects be subject to the provisions of Ontario Statutes 1924, chapter 15, 14 George V, which defines and protects the rights of the Indians.
- (e) That early steps be taken to have the newly selected reserves regularly surveyed by an Ontario land surveyor and plans thereof lodged in the necessary record offices of the Dominion of Canada and the province of Ontario; furthermore that ample notice be given the chief of each band of the approximate time that the surveyor will be upon the ground to survey the allotment for reserve or reserves and permit accredited representatives of the band to assist in selecting and establishing the lines and permanent posts.

Accompanying this report and being part and parcel thereof are:—

(1) Map of area covered by Adhesion to Treaty No. 9, with explanatory legend.

(2) Pictures:

- (a) Signing of Adhesion at Wendigo.
 (b) Group of Indians enrolled at Fort Severn.
 (c) Signatories and witnesses at Winisk.

The commissioners beg to submit herewith the original Adhesions to Treaty No. 9, signed in triplicate.

All of which is respectfully submitted by

Your obedient commissioners,

W. C. CAIN,
 H. N. AWREY.

September 29, 1930.

BUILDINGS

The following are the buildings erected during the fiscal year of 1929-30.

Gordon's Indian Residential School, Punnichy, Sask.

Cecilia Jeffrey Indian Residential School, at Kenora, Ont., which was started last year, was completed.

Brandon Indian Residential School, Brandon, Man.

Beauval Indian Residential School, Beauval, Sask. Building operations were started this year.

Old Sun's Indian Residential School, Gleichen, Alta.

Alert Bay Indian Residential School, started last year, was completed.

A new wing was built to the St. Bruno's Mission, near Grouard, Alta.

Day Schools have been erected at the following places:—

Oka Indian Day School, P.Q.

Sand Point Indian Day School, Ont.

Gull Bay Indian Day School, Ont.

Skidegate Indian Day School, B.C.

Day School and Teachers' Residence at Lake Manitoba, Man.

Big Eddy Day School, Man.

Extensive improvements were made to the Kenora R.C. Indian Residential School, Kenora, Ont., and to the Pine Creek Indian Residential School, Man.

Other buildings were erected as follows:—

Barn at Cross Lake, Man.

Residence for the Principal at McKay Indian Residential School, Man.

Outbuildings at the St. Phillip's Indian Residential School, Sask.

Outbuildings at the Cowesses School, Sask.

Outbuildings at St. George's Indian Residential School, Lytton, B.C.

Chapel at St. George's Indian Residential School.

Laundry at the Qu'Appelle Indian Residential School, Sask.

BRIDGES, WATERWORKS, SEWERAGE AND IRRIGATION SYSTEMS, ROADS, DYKING AND WHARVES

BRIDGES

Bridges have been repaired or reconstructed on the following reserves: Rolling River, Man., Walpole Island, Ont., Casca reserve, B.C.

DYKING

Protection work and dyking was carried out on the Whycocomagh reserve, Nova Scotia.

IRRIGATION SYSTEMS

Irrigation systems were constructed or improved on the following reserves in British Columbia: Anderson Lake, Bridge River, Yale No. 1, St. Mary's No. 1, Soda Creek, Ashcroft, Roberts Creek, Cayuse Creek No. 2, Dog Creek, Canim Lake No. 1, Alkali Lake, Lytton No. 15 and 18, Lower Nicola, North Thomson, Kamloops, Nicomen.

ROADS

Main roads and highways are being gradually constructed or improved in co-operation with the provincial Department of Highways on the following reserves:—

Province of Ontario.—Manitoulin Island, Wiwemikong, Tyendinaga, Rama, Alnwick, Muncey, Rice Lake, Gore Bay, Six Nations, Moravian, Oneida, Golden Lake, Walpole Island, Kettle Point, Sarnia, Cockburn Island, West Bay, Saugeen, Cape Crocker, Mud Lake and Scugog.

Nova Scotia.—Bear River, Scarsdale, Shubenacadie, Chapel Island, Whycocomagh, Eskasoni, Malagawatch.

New Brunswick.—Tobique.

Manitoba.—Dog Creek.

Saskatchewan.—Sweet Grass and Peguis.

British Columbia.—Cowichan, Burrard, Stuart Lake, Hope No. 4, Cheslath, Tache, Fraser Lake, Lillooet.

Quebec.—Ouiatchouan, Temiskaming, Seven Island, Doncaster, Caughnawaga, Restigouche, Abenakis, Oka, Lorette, Bersimis, and Maniwaki.

DRAINAGE SYSTEMS

Drainage systems were constructed on the Abenakis reserve in Quebec, and Walpole Island, Ont.

WATER WORKS

Water work systems were constructed on the Casca reserve, Nicomen and Bella Bella, B.C.

WHARVES

A new dock was erected at Walpole Island, Ont.

ELECTRIC LIGHTING SYSTEMS

Electric lighting systems were installed for the lighting of the Bella Coola and Metlakatla Indian Villages, B.C.

SURVEYS

Listed hereunder are the principal surveys and investigations conducted by this department during the fiscal year ending March 31, 1930.

NEW BRUNSWICK

The new Devon Indian reserve was subdivided for Indian occupation and levels taken to determine the location of roads, drainage and water systems.

A valuation was made of the water front of lot 6, Eel River, in connection with the purchase of this lot for the Eel Ground reserve.

QUEBEC

The final right of way for the new Châteauguay road through the village of Caughnawaga was decided upon and purchased.

An investigation was made in connection with flooding damages on the Oujatchouan Indian reserve.

The recently purchased lot No. 9, Dundee, for St. Regis reserve was subdivided for Indian occupation and the allotment of this subdivision was arranged.

A survey was made of the school lot at the Pierreville reserve and levels were taken for the purpose of locating drainage and designing works to protect the river banks from erosion.

ONTARIO

A survey was made in the Lac Seul Indian reserve to determine the timber lease boundaries.

A survey was made in Cayuga to determine the extent of lands sold in the Jones Tract.

MANITOBA

New reserves were located and surveyed at Pukatawagan, High Rock and Brochet.

Subdivision survey for the purpose of Indian occupation was made in the Oak River Indian reserve.

SASKATCHEWAN

A new reserve was located and surveyed at Southend.

A subdivision survey for Indian occupation was made in the Standing Buffalo Indian reserve.

ALBERTA

Subdivision surveys and valuations were made for the purpose of sale of the Peace River Crossing Indian reserve No. 151, William McKenzie Indian reserve No. 151K and Beaver Indian reserve No. 152.

Valuations were made for the purpose of sale of the following:—

John Felix Tustawits No. 151 B.
 Taviah Moosewah No. 151C
 Alinekwoonay No. 151D
 Duncan Tustawits No. 151E.
 David Tustawits No. 151F.
 Gillian Bell No. 151G.
 Louison Cardinal No. 151H.
 Neepee Chief No. 152A

A subdivision survey for Indian occupation was made in the Driftpile Indian reserve No. 150.

BRITISH COLUMBIA

Subdivision surveys for Indian purposes were made in the Greenville reserve and Sechelt Indian reserve No. 2.

The boundaries of Quesnel Indian reserve No. 1, Rich Bar No. 4, Mission No. 2 and Sechelt No. 2 were re-established.

The following new reserves were located and surveyed for the Tsimpsan band:—

Indian reserve No. 26, being lot 3979, range 5, Coast District	
“ “ 27 “ 2589 “ 4 “	
“ “ 28 “ 2588 “ 4 “	
“ “ 29 “ 3978 “ 5 “	
“ “ 32 “ 5434	Cassiar District
“ “ 38 “ 3969 “ 5	Coast District
“ “ 39 “ 3968 “ 5	“
“ “ 45 “ 3970 “ 5	“
“ “ 46 “ 3971 “ 5	“
“ “ 49 “ 3966 “ 5	“
“ “ 62 “ 3977 “ 5	“
“ “ 74 “ 3937 “ 5	“
“ “ 75 “ 7180 “ 5	“
“ “ 76 “ 7187 “ 5	“
“ “ 77 “ 7181 “ 5	“
“ “ 78 “ 7186 “ 5	“
“ “ 79 “ 7185 “ 5	“
“ “ 80 “ 7184 “ 5	“
“ “ 81 “ 7183 “ 5	“
“ “ 82 “ 7182 “ 5	“
“ “ 87 “ 3967 “ 5	“

and also lots 3972, 3973, Range 5, Coast District and lots 4862, 4863 and 4864, Cassiar District.

Cut off surveys were made in the Tsimpsan Indian reserves Nos. 2, 4 and 19.

A survey was made in connection with the Industrial School lot at Coqua-leetza.

Surveys were made of the following new reserves:—

Hihium Lake Nos. 6A and 6B.
 Lytton Indian reserve No. 31.
 Boothroyd Indian reserves Nos. 5B and 5 C.
 McDonald Lake No. 1.
 Atlin No. 9.
 Jennings River No. 8.
 Teslin Lake No. 7.

YUKON

Surveys were made to establish new reserves at Teslin Post and Nesutlin.

SUMMARY OF INDIAN AFFAIRS BY PROVINCES AND TERRITORIES

The local administration of Indian lands, on the reserves scattered throughout the Dominion, is conducted through the Department's agencies, of which there are in all 116. The number of bands included in an agency varies from one to more than thirty. The staff of an agency usually includes various officers, in addition to the agent, such as the medical officer, clerk, farm instructor, field matron, nurse, constable, stockman, etc., according to the special requirements of the agency in question. At many of the smaller agencies in the older provinces, where the Indians are more advanced, the work is comparatively light, requiring only the services of an agent. The work of the agencies is supervised by the department's inspectors. There are Indian Commissioners at Regina and Victoria, acting in a supervisory capacity for the Prairie Provinces and British Columbia respectively.

ONTARIO

Agencies.—The Indian Agency offices in Ontario are located as follows:—Brantford, Cape Croker, Chapleau, Chippewa Hill (Saugeen), Christian Island, Deseronto, Fenella (Alnwick), Fort Frances, Gore Bay, Hagersville, Highgate, Kenora, Longford Mills, Manitowaning, Moose Factory, Muncey, Parry Sound, Peterborough (Rice and Mud Lakes), Port Arthur, Port Perry, (Seugog), Ruby (Golden Lake), Sarnia, Sault Ste. Marie, Sutton West (Georgina and Snake Island), Sturgeon Falls, Thessalon and Walpole Island.

Tribal Origin.—The great majority of the Indians of Ontario are Ojibwas, and are of Algonkin stock. The Oneidas of the Thames, the Mohawks of the Bay of Quinte, the Mohawks of the Parry Sound district, and the Six Nations of the Grand River, are of Iroquoian stock. There is a band of Pottawattamies at Walpole Island, and Delawares at the Carodoc agency; these are of Algonkin stock.

Occupations.—The Indians in the western and central parts of Ontario engage largely in farming. The reserves generally are well suited to this purpose and the activity of the department's field agents has resulted in a steady improvement both in the methods of operation and the results achieved. The success achieved by the returned soldiers of this province has been especially creditable and they are rapidly developing prosperous communities.

During the summer months Indians find a profitable source of income as guides and canoe-men. Many are employed at various industries and trades, while railway and navigation companies employ a large number. As a rule they are excellent bushmen and many find employment in the various lumber camps. There is still an excellent market for snowshoes, canoes and moccasins, and these are usually manufactured by the other members of the community.

The women also have many sources of income; some are employed as domestics; others support themselves by making baskets and fancy work. In certain districts berry-picking is an important item and furnishes considerable income.

Dwellings.—The great majority of the Ontario Indians have comfortable farmhouses which compare very favourably with those of their white neighbours. Many own houses of brick and stone, although in the outlying and more remote districts the old log houses are in the majority. In the more settled districts the Indians have followed the examples of the whites and both houses and farm buildings are comfortable and of excellent construction.

New Ontario.—In the remote parts of Ontario hunting and fishing are still the chief sources of livelihood. Acting as guides and canoe-men during the summer months adds considerably to their income. While agriculture is not

carried on to any extent, most of the bands grow considerable crops of potatoes and vegetables. They are, of necessity, more or less nomadic and consequently live in tents most of the year. This condition will greatly change as civilization progresses.

QUEBEC

Agencies.—The following agencies are included in the province of Quebec: Becancour, Bersimis, Caughnawaga, Gaspé, Lake St. John, Lorette, Maria, Mingan, Oka, River Desert, Restigouche, Seven Islands, St. Augustine, St. Regis, St. Francis, Temiskaming and Viger.

Tribal Origin.—The principal tribes found in Quebec are: Iroquois at Caughnawaga, Lake of the Two Mountains, and St. Regis; the Hurons of Lorette are also of Iroquoian stock; the Montagnais, who are of Algonkin stock, at Bersimis, Mingan, Lake St. John, Seven Islands; the Abenakis, also of Algonkin stock, at Becancour and St. Francis; the Micmacs, also of Algonkin stock, at Maria and Restigouche; and the Malecites, also of Algonkin stock, at Viger.

In the agricultural districts of the province the Indians are developing a keener interest in farming operations and are making decided progress. In the Gaspé peninsula the Indians find employment in the lumber camps and mills, but on the north shore of the gulf, fishing, hunting and trapping are still the principal sources of income. In the northern part of the province lumbering is the chief pursuit. One of the principal industries of the Indians of Quebec is making baskets, and many of the Indians spend the summer months at the resorts in order to dispose of the baskets, lacrosse sticks, racquets, moccasins, etc., to the tourists. Some of them, particularly in the Saguenay district, act as guides and canoe-men.

Dwellings.—In the older settled districts of the province the Indians own many excellent stone and brick houses. Generally speaking, the buildings are almost all of good construction, comfortable and sanitary. In the more remote districts, where hunting and trapping are still the principal occupations, the Indians necessarily live in tents during the greater part of the year.

The North Shore.—Along the north shore of the Gulf of St. Lawrence, the Indians have been taking a marked interest in the fishing industry. At Mingan, Natashkwan, Romaine, St. Augustine and Moisie, the fishing is under departmental supervision. Salmon and cod are the principal marketable fish, and are a source of considerable income to the Indians. The land is not suitable for extensive cultivation, but many of the Indians have very creditable gardens.

NEW BRUNSWICK

Agencies.—There are three agencies in the province of New Brunswick, the Northeastern located at Richibucto, the Northern located at Perth, and the Southwestern located at Fredericton.

Tribal Origin.—The majority of the Indians of New Brunswick belong to the Micmac race, which is of Algonkin stock. In addition to these there are some bands of Malecites, also of Algonkin stock.

Occupations.—In the Northeast division the Indians are mostly engaged in fishing, hunting and trapping. Some farming is carried on, and the Indians have rather tended to increase their interest in this regard.

The lumbering industry employs quite a large number and the Indians all through the eastern provinces have become very proficient in the lumber camps, on the river drives and in the mills. In the northern division there is less, farming carried on, and the Indians during the summer months find employment generally as day labourers. In the Southern division they support themselves chiefly by the manufacture and sale of Indian wares.

NOVA SCOTIA

Agencies.—There are eighteen Indian agencies in the province of Nova Scotia, namely; Yarmouth, Digby, Shelburne, Lunenburg, Annapolis, Kings, Windsor, Shubenacadie, Halifax, Cumberland, Colchester, Pictou, Antigonish-Guysboro, Richmond, Inverness, Victoria, Sydney and Eskasoni.

Tribal Origin.—The Indians of Nova Scotia are of Algonkin stock, and bear the distinctive name of Micmac.

Occupations.—They follow various occupations, but, as a rule, do not confine themselves to any particular one. Many of them cultivate the land with indifferent success, but as there are exceptions in almost every case, so it is with our Indians; a few of them are succeeding very well as farmers. The majority of those living near industrial centres usually work as day labourers. Hunting, trapping, and acting as guides for sportmen are favourite occupations, more especially with Indians of middle age. Basket-making and the manufacture of fancy mocassins, etc., are confined mostly to women. A profitable employment among Indians in a few sections of Nova Scotia is the manufacture of hockey sticks.

Dwellings.—With very few exceptions, Indians in Nova Scotia occupy houses of frame construction, well finished on the outside, but unfinished inside. Every settlement, however, has a few comfortable dwellings well finished throughout. Other buildings owned by Indians—barns and storehouses—are mostly of frame construction also.

PRINCE EDWARD ISLAND

Agency.—One agency is sufficient for the purposes of the department in this province, as the total Indian population is only 295.

Tribal Origin.—The Indians of this province all belong to the Micmac tribe, which is of Algonkin stock.

Occupations.—But few of the Indians of Prince Edward Island are farmers. The principal industries are basket-making and fishing.

MANITOBA

Agencies.—The following agencies are included in the province of Manitoba: Birtle, Clandeboye, Fisher River, Griswold, Manitowapah, Norway House, Pas and Portage la Prairie.

Tribal Origin.—The majority of the Indians of Manitoba belong to the Ojibwa race, which is of Algonkin stock. Bands of Swampy Crees are found at the Norway House and Fisher River agencies and in the York Factory district; these are also of Algonkin stock. The Indians located at the Griswold agency are Sioux; there are also Sioux at the Birtle and Portage la Prairie agencies. There is a band of Chipewyans at Fort Churchill; this tribe is of Athapascan stock.

Occupations.—The reserves in Manitoba suitable for extensive agriculture are mainly within the Birtle, Griswold and Portage la Prairie agencies, and generally speaking progress has been satisfactory in recent years.

In the northern agencies the chief occupations are hunting, trapping and fishing. All of the northern Indians are expert guides and canoe-men, and many find employment in this way or with the transport or fur companies.

In the southern and more settled districts many of the younger people seek employment as day labourers, and owing to the high wages, have been fairly prosperous. The Indian women make needle-work, baskets, etc., for which there is a ready market.

Dwellings.—In recent years the Indians have adopted more sanitary methods of living. Their houses are more comfortably furnished and of better construction than formerly. In the north the nomadic life of the Indians does not permit of other than the old-fashioned log house, but even these are being greatly improved and in some cases are being replaced by suitable frame dwellings.

SASKATCHEWAN

Agencies.—The following agencies are included in the province of Saskatchewan: Assiniboine, Battleford, Carlton, Crooked Lake, Duck Lake, File Hills, Ile à la Crosse, Moose Mountain, Onion Lake, Pelly, Qu'Appelle and Touchwood Hills.

Tribal Origin.—The most numerous tribes among the Saskatchewan Indians are the Ojibwas, Swampy Crees, and Plain Crees, which all belong to the great Algonkin stock. In addition to these, Sioux Indians are found at the Assiniboine, Moose Mountain, Qu'Appelle and Carlton agencies, and on the Moose Woods reserve. In the Onion Lake agency there is a band of Chipewyans, who are of Athapascan stock. There are also a few Chipewyan Indians in the Ile à la Crosse district.

The principal occupation of the Indians of Saskatchewan is mixed farming and stock-raising. The close supervision which the department has had over these Indians has greatly improved their methods of farming. Most of the Indians are well provided with machinery of good quality. As a rule they have good stock and suitable houses. In the outlying districts, however, hunting and trapping are still the main sources of income and will so remain until civilization encroaches upon the hunting grounds.

Dwellings.—The dwellings of the Indians on the reserves where farming is carried on are now mostly of frame construction. The out buildings, however, are generally of logs, but even there there has been some improvement.

ALBERTA

Agencies.—The following agencies are included in the Province of Alberta: Blackfoot, Blood, Edmonton, Hobbema, Peigan, Saddle Lake, Sarcee, Stony and Lesser Slave Lake.

Tribal Origin.—The Alberta Indians are of Algonkin stock, with the exception of the Sarcees near Calgary and the Beavers and Slaves in the Lesser Slave Lake agency, who are Apathascan; the Paul's band in the Edmonton agency, who are Iroquoian; and the Stonies, who are of Siouan stock. The Algonkin Indians of Alberta are subdivided into Blackfoot nation, comprising the Indians of the Blackfoot, Blood and Peigan agencies; Plain Crees found in the Lesser Slave Lake, Saddle Lake, and Hobbema agencies, and a band of Ojibwas at Moberly Lake, in the Lesser Slave Lake agency.

The principal occupations of the Indians of Alberta are farming and stock-raising. Almost all the reserves in the settled districts of the province have large herds of horses and cattle.

In the northern parts of the province hunting and trapping are still almost the sole sources of income; there is practically no farming carried on and the construction of steamers on the Peace and Athabasca rivers, and of the railways to Peace River Crossing and Fort McMurray, have greatly lessened the wages of the Indians with the trading companies and transports.

Dwellings.—In the southern part of the province the dwellings and farm buildings are of excellent construction and quality. Almost all the reserves where extensive farming is carried on boast of up-to-date modern dwellings, comfortable and well constructed. In the northern parts of the province the majority of the Indians continue to follow their primitive nomadic mode of life, and many of them still live in tents and tepees during the greater part of the year.

BRITISH COLUMBIA

Agencies.—The following agencies are included in the Province of British Columbia: Babine and Upper Skeena, Bella Coola, Cowichan, Kamloops, Kootenay, Kwawkewlth, Lytton, New Westminster, Nicola, Okanagan, Queen Charlotte, Skeena, Stikine, Stuart Lake, Vancouver, West Coast, and Williams Lake.

Tribal Origin.—The Indians of the Bella Coola, Cowichan, Kamloops, Lytton, New Westminster, Vancouver, and Okanagan agencies belong to the Salish tribe. The Kootenay tribe is located in the agency of the same name. The Kwakiutl-Nootka tribe is located at the Kwawkewlth and West Coast agencies; the Haidas, in the Queen Charlotte islands; the Tlingits, in the Stikine; and the Tsimshians in the Skeena agency. The Indians of the Babine, Stuart Lake and Williams Lake agencies belong to the Athapascan race.

In addition to these there are about 2,500 nomadic Indians in the province who cannot be correctly classified according to linguistic stock or tribal origin.

Occupations.—The occupations of the Indians of British Columbia vary with their habitat. The Indians situated along the coast earn their livelihood principally by fishing. In many instances they own their own motor launches, nets and gear, while others are supplied by the various canneries. Many of the women are also employed in the canneries or in the hop fields, and earn a steady income.

In the inland parts of the province some farming operations are carried on and particularly in the irrigated districts grain, fruits of all kinds, and vegetables have been raised with success. These Indians have been making marked progress in this regard and are now well equipped with modern machinery.

The Kootenay, Kamloops, Okanagan and New Westminster Indians own large herds of horses and cattle. While the Indians in the northern and remote parts of the province still depend upon hunting and trapping for their livelihood, the agents report a marked improvement in their manner of living.

Dwellings.—Except in the more remote districts the Indians of British Columbia have built comfortable and modern dwellings and outbuildings. Their progress in this respect has been rapid.

NORTHWEST TERRITORIES

Agencies.—The department has now three agencies in the Northwest Territories, namely, Fort Simpson, Fort Smith, and Fort Resolution.

Tribal Origin.—The principal tribes found in the Far North are the Slave, Hares, Loucheux, Sicannies, Dogribs, Yellow-knives, Chipewyans and Caribou Eaters. All these tribes are of Athapascan stock. There are a few Crees in the neighbourhood of Chipewyan. These are of Algonkin stock. The most northerly tribes are the Takudah, who extend to the Mackenzie Delta; and the Copper Mines, who are located along the Coppermine river. The territory occupied by these two last-named tribes is contiguous to that inhabited by the Eskimos.

These Indians depend entirely upon hunting and trapping for a livelihood.

Occupations.—A few have been induced to raise small plots of potatoes. They own no horses or cattle, transportation being almost entirely by canoe along the great waterways, or by dogs in winter. They catch and preserve large quantities of whitefish for their own use and for consumption by their dog-trains in winter.

YUKON

Tribal Origin.—The Forty Mile, Blackstone, and Moosehide bands belong to the Takudah tribe. There is a band of Slavies at Lancing Creek who migrated from Fort Good Hope, on the Mackenzie river; another band of Slavies, called Nahanies, is located at the headwaters of the Pelly river. All these Indians are

of Athapascan stock. At Mayo, Selkirk, Little Salmon and Carmacks there are bands belonging to the tribe known as Stick Indians. Bands belonging to the Tlingit tribe are found at Whitehorse, Teslin Lake, Champagne Landing, and Carcross.

Occupations.—Hunting, trapping and fishing are the chief occupations of the Yukon Indians, and they have been fairly successful during the past year. The women also derive some revenue from the sale of moccasins and curios of various kinds, while the men are expert at making toboggans and snowshoes. Practically no farming is carried on owing to climatic conditions, but some of the Indians cultivate patches of potatoes and other vegetables.

FINANCIAL

At the close of the twelve months ended March 31, 1930, capital of the Indian Trust Fund, which at the end of the preceding year amounted to \$13,629,403.74, had increased to \$13,856,521.04.

The amounts expended from the Consolidated Revenue Fund were as follows: Voted by Parliament for the purposes of the department, \$4,915,137.44, and annuities by statute, \$219,416.

On March 31, 1930, the balance to the credit of the Indian Savings Account for the funding of the annuities and earnings of pupils at industrial schools was \$219,970.42. Deposits and interest during the twelve months aggregated \$42,248.84 and withdrawals, \$34,866.62.

GENERAL

The recapitulation of complete census made by the department of the Indians of Canada, during the year, 1929, which follows herewith and therein also will be found statistics with regard to Grain, Vegetable and Root Production; Land, Private and Public Buildings and Property; Live Stock and Poultry; General Effects; Value of Real and Personal Property, and Progress during year; Sources and Value of Income; Schools; Indian Land; Civil Government; Appropriation Accounts and Indian Trust Fund.

I have the honour to be, sir,

Your obedient servant,

DUNCAN C. SCOTT,

Deputy Superintendent General of Indian Affairs.

DOMINION OF CANADA

REPORT

OF THE

DEPARTMENT OF MINES

FOR THE

FISCAL YEAR ENDING MARCH 31, 1930

OTTAWA
F. A. ACLAND
PRINTER TO THE KING'S MOST EXCELLENT MAJESTY
1931

No. 2269

*To General His Excellency the Right Honourable Viscount Willingdon, G.C.S.I.,
G.C.M.G., G.C.I.E., G.B.E., Governor General and Commander-in-Chief
of the Dominion of Canada.*

MAY IT PLEASE YOUR EXCELLENCY:

The undersigned has the honour to lay before Your Excellency, in compliance with 6-7 Edward VII, chapter 29, section 18, the report of the work of the Department of Mines, for the fiscal year ending March 31, 1930.

W. A. GORDON,
Minister of Mines.

REPORT
OF THE
DEPARTMENT OF MINES
FOR THE FISCAL YEAR ENDING MARCH 31, 1930

To the Honourable W. A. GORDON, K.C.,
Minister of Mines,
Ottawa.

SIR,—In accordance with the requirements of Parliament, I have the honour to submit the Annual Report of the Department of Mines for the year ending March 31, 1930.

Continued expansion in mining and metallurgical activities throughout the Dominion has been the keynote of the period covered by this report. This has been featured mainly in underground and surface development at the mines, in the erection of mills, smelters, and refineries, and in additions to existing structures and equipment, all of which point to increased stability and permanency of future operations. Also, the calendar year 1929 saw a new high record attained in Canadian mineral production, in value as well as in quantity of output.

The growth of the mining industry has again been reflected in increased departmental activities. Field and laboratory investigations have been extended to secure the greatest benefit for the industry from the facilities available, and the work of increasing existing facilities to render greater and urgently needed service has been continued. It is gratifying to note that both Dominion and provincial authorities are fully alive to the increasing industrial importance of mining and its associated arts, and that a larger amount of scientific and technical research is being devoted each year to their improvement.

The operations of the various branches of the department are reviewed below in detail by the heads of each branch and division. Present conditions in the industrial field are such that the greater part of the work being done is of urgent economic value, for which pressing demands exist. Nevertheless, other research investigations are carried on as time and circumstances permit, particularly when there is some likelihood of the application of scientific developments to Canadian conditions turning to the benefit of Canadian industry.

Increased activities in geological and topographical mapping and related work undertaken by the Geological Survey engaged the attention of fifty-two field parties working in widely separated parts of the Dominion. One party commenced the geographical and geological mapping of an area on the west coast of Hudson bay, immediately south of Rankin inlet, known to contain mineral deposits. Special investigations included the completion of the geological mapping of the Turner Valley oil and gas area of Alberta; a survey of the underground water supply for Regina, and the study of mapping of the surface deposits, including soils, of certain areas in southern Manitoba and Saskatchewan. Field and office work in anthropology and biology was continued by the National Museum of Canada.

The application of geophysics to the study of geological problems and, more particularly, to the investigation of ore deposits, is a matter of considerable interest to those engaged in the development of Canada's mineral resources. The Geological Survey this year continued the field study commenced in 1928 of the various methods and appliances now in commercial use for those purposes. Valuable, though highly technical, data have been derived from this investigation, the object of which is to ascertain the applicability and limitations of the various processes employed.

Research was continued by the Mines Branch into the more efficient treatment and utilization of the numerous metallic and non-metallic minerals of commercial importance. Investigations of modern methods of mining and milling and of the mineral technology of the more important ores have been made with a view to making this information available to the industries concerned. In the field of metallurgy the Mines Branch continued to contribute to the development and practical conservation of the Dominion's mineral resources through the improvement of methods for recovering more of the mineral content of ores, with attendant lessening of the cost of recovery. Special investigatory work on the utilization of Canadian iron ores was initiated and will be continued.

In the new Fuel Research Laboratories satisfactory progress has been made with the installation of equipment, and preliminary tests have begun. The work now being done includes tests on the burning of pulverized fuels, the examination of oil-shales, natural gas, and crude oils, the testing of coals, and the carbonization of coal with attendant recovery of by-products. Special studies have been made in the ceramics laboratories for the purpose of improving certain processes now in use in the clay-working industry, and for the elimination of unscientific and wasteful practices. Investigations have also been made on materials used in road construction. In addition to these technical studies, increased attention is being given to economic conditions and problems affecting the mineral industries generally.

The department wishes to acknowledge the co-operation of Dominion and provincial Government departments, of the development branches of the railway companies, banks, chambers of commerce, and of other Canadian organizations interested in the development of our natural resources. The general type of investigation undertaken by the department differs distinctly from those conducted by other organizations, and the danger of overlapping is almost entirely eliminated. Where similar work is carried on—as is the case with some of the universities, provincial governments, and the National Research Council—every effort is made to co-ordinate the work of the department with that of these various bodies. Close co-operation was also maintained with the Imperial Institute (London), the British Department of Scientific Research, the United States Bureau of Mines and Geological Survey, and with certain scientific and technical societies in the United States.

The results of all major investigations conducted by the department are made available to the public in the form of summary reports, special bulletins, maps, and memoirs. Much information of scientific, technical, and current interest related to the work of the department is also disseminated through the public and technical press, and by means of addresses. A selection of these papers and addresses is listed on pages 6 to 9. The winter series of Museum lectures, a standing feature of the educational work in Ottawa, was continued throughout the season of 1929-30. The official mining newsletter series prepared in the department for distribution from the High Commissioner's Office in London is now in its seventh year. Through this fortnightly service some four hundred selected newspapers, mining, banking, and investment houses in the United Kingdom and on the Continent, are informed of current develop-

ments in Canadian mining and metallurgical operations. The titles of the articles dispatched during the year will be found following the list of papers and addresses mentioned above.

The Deputy Minister, in addition to his administrative duties, served as chairman or member of the following official bodies: Council of the North West Territories; Dominion Fuel Board; Canadian Committee of the World Power Conference; Advisory Committee on Mining Regulations; National Research Council and several of its associate committees; Turner Valley Waste Gas Committee; Bituminous Sands Administrative Committee; and Advisory Committee on Minerals of the Imperial Institute. In February, 1930, the Deputy Minister sailed for South Africa to represent the Government of Canada at the Third (Triennial) Empire Mining and Metallurgical Congress.

Investigations into the utilization of the extensive deposits of bituminous sands of northern Alberta have been carried on for some years by the department and by the Research Council of Alberta. These investigations have been conducted along different lines, but the field in each case has been widening, and for this reason it was found desirable to secure the co-ordination of all research work on these potentially valuable resources. With this end in view the Honourable Charles Stewart, Minister of Mines, and the Honourable J. E. Brownlee, Premier of Alberta, arranged for the creation of a Bituminous Sands Administrative Committee, the membership of which is composed of the Deputy Minister of Mines, the President of the Research Council of Alberta, and the President of the National Research Council. All research on these resources is now controlled by the committee.

The Committee on the Conservation and Utilization of Waste Gas in Turner valley was created by the Dominion and Alberta Governments in the summer of 1929 to report upon the situation that had arisen in Turner Valley gas and oil field, Alberta. The inquiries instituted by the committee covered a wide field, and included studies of current practice in widely separated oil fields, industrial developments associated with gas fields, and current chemical processes in which are utilized gases similar to those being wasted in Turner valley. The committee recommended the formulation of new regulations to control all phases of the gas-producing industry, and the administration of the same by one body representing both Dominion and provincial authorities.

For the purpose of considering the means that might be taken to improve conditions in the coal mining industry in British Columbia, a conference was held in Victoria on October 1, 1929, at which the Deputy Minister of Mines and officers of the department met the Honourable W. A. McKenzie, officials of the British Columbia Department of Mines, and representatives of the coal mining industry of the province. The possibilities of the utilization of coal by destructive distillation at high and low temperatures, and the combustion of coal in pulverized form were discussed, and it was arranged that a sufficient supply of British Columbia coals should be made available in Ottawa for experimental work in the Fuel Research laboratories of the department. Investigative work was continued by the Mines Branch and the Geological Survey on the Cape Breton coal resources. The machinery set up for the administration of the Order in Council governing test movements of coals mined in eastern Canada has been made to apply to test movements of western Canadian coals. It is hoped that these various experiments will prove beneficial to the coal mining industry generally.

Finally revised figures of production for 1929 mark another step in the progress of Canada's mineral industries. For the fourth year in succession a new high record output was reached with a total production value estimated at nearly \$311,000,000, an advance of nearly \$36,000,000 or 13 per cent over the total output value for 1928. During the year important gains were made in

many different fields, new records being established in the production of copper, gold, nickel, and zinc among the metals, and of asbestos, petroleum, and salt among the non-metallics. In the more significant fields of mining exploration and development, upon which the output of the future to a great extent depends, very satisfactory progress was also made.

The high metal prices that have prevailed during recent years provided the impetus to intensive mining developments not only in Canada but in all mining countries. Reduced industrial activities and increasingly large stocks of metals on hand have resulted in a general slackening in the rate of production. The world depression that has seized commerce and industry since the beginning of 1930 will most likely be reflected this year in diminished activity in some branches of Canadian mining and in reduced output values for mining and metallurgical products generally, with that of gold excepted. The fall in the prices of copper, lead, and zinc, commodities to which the Dominion owes a large percentage of its increased mineral production in recent years, will be a principal contributory factor to any eventual decline, although it is probable that the 1930 production of these metals will exceed in quantity that of 1929.

These indications, considered in conjunction with the increase in mining, milling, smelting, and refining facilities already referred to, point to the increasing industrial stability of the Canadian mining industry and to its ability to operate and to advance in face of adverse market conditions. From its former status as a producer of raw mineral material the Dominion is gradually developing into a manufacturer of the finished mineral product, metallic and non-metallic. The present exceptional position of world industry veils to some extent the real situation which over a period of time becomes more than ever apparent. The world's need for minerals continues to increase with almost astonishing rapidity, and with the gradual exhaustion of Old World resources it is inevitable that the demand for Canada's mineral products will become greater, more varied, and more insistent.

Dominion Fuel Board

The Dominion Fuel Board held twelve meetings during the year and many subjects appeared on the agenda.

In its studies of the fuel situation, the board, in addition to continuing a systematic program of investigation that had been previously initiated, enlarged considerably the sources from which its information is drawn. Connexions with the coal-mining industry and the coal trade were extended and co-operation in the exchange of information between the board and coal marketing associations was advanced. Through such connexions the board obtained a great deal of data on the coal situation that are not otherwise available.

During the year, the second of the seasonal movements of Alberta coal to Ontario under the test freight rate of \$6.75 a ton, as authorized by Order in Council of March 16, 1928 (P.C. 439), was carried out. The board, in order to ascertain the results so far obtained in marketing the coal in Ontario, made a survey over representative areas and consuming centres of the province.

Administration of Order in Council of March 30, 1928 (P.C. 539), so far as it relates to inland rail shipments of water-borne coal from the Maritime Provinces, was an important part of the board's work. This work included inspection of applications from the coal companies for shipments under the provisions of the Order in Council, and payments made to the railways.

During the year eighty-two applications under Order in Council P.C. 539 were dealt with by the board. These applications referred to the movement of nearly 750,000 tons of coal.

In the summer of 1929 the secretary of the board visited the leading cities of Manitoba and Saskatchewan to study fuel costs to consumers, extent of coal markets, and competitive conditions as between Canadian and imported coals.

Administration of the Domestic Fuel Act (1927) during the past year included the final inspection by the board of the coking plant of the Nova Scotia Light and Power Company, Limited, at Halifax.

An application to participate under the benefits of the Domestic Fuel Act was received from the Quebec Power Company of Quebec. This application was accepted, preliminary inspection carried out, and an agreement entered into by the Minister with the applicant.

The Mineral Resources Division of the Department of Mines again conducted for the Fuel Board the annual survey of domestic fuel consumption in Ontario, Quebec, and Manitoba, and in the year under review extended the survey to cover the Maritime Provinces. The board continued its program of distributing printed cards and pamphlets showing proper methods of burning coke and other fuels displacing American anthracite.

A pamphlet on the subject of humidity in house heating was published by the board during the year. The public demand for this pamphlet quickly exhausted the first edition of 25,000 copies and a second edition of 50,000 copies was necessitated. Another pamphlet which the board had prepared during the year deals with the cost and convenience of house heating with various fuels, including fuel oil and city gas.

The board received many inquiries from representatives of Canadian and British interests who were investigating questions relating to coal markets or to the establishing of new sources of fuel supply. Inquiries from the public for information respecting fuels and the fuel situation were also dealt with. In response to requests from the newspapers and technical journals publicity articles on the fuel situation were prepared under the board's direction.

As in former years, generous co-operation was given to the board by the National Development Bureau and the Dominion Water Power and Reclamation Service, Department of the Interior, the Dominion Bureau of Statistics, Department of Trade and Commerce, the Mines Branch and the Geological Survey, Department of Mines, and by many of the coal interests throughout Canada.

Your obedient servant,

CHARLES CAMSELL,

Deputy Minister.

OTTAWA, ONT., April 7, 1930.

List of Papers and Addresses

NOTE. Lists of the papers prepared and addresses delivered during the year by members of the staffs of the Divisions of Anthropology, Biology, and Mineralogy are to be found in the Annual Report of the Director, National Museum of Canada.

GEOLOGICAL SURVEY

W. H. Collins, Director

CHANGES IN STAFF

There were two resignations during the fiscal year, both from the Geological Division. On October 4, 1929, Victor Dolmage resigned to enter the commercial field as a consulting geologist. Since his appointment to the Survey staff on November 20, 1917, Dr. Dolmage had worked in British Columbia and had acquired a valuable knowledge of the geology and mineral resources of the Cordilleran region. He had also been in charge of the branch office of the Survey at Vancouver since May 12, 1923. J. B. Mawdsley resigned on November 15, 1929, to take charge of the Department of Geology in the University of Saskatchewan. Dr. Mawdsley had been on the Survey staff for seven years, during which he did exceptionally fine geological work in the Precambrian region of western Quebec, especially in the Rouyn mineral field. By these resignations the Survey has lost two effective and experienced geologists.

Three assistant geologists were appointed: G. W. H. Norman on June 13, 1929, H. S. Bostock on December 20, 1929, and R. B. McConnell on March 27, 1930.

The Draughting Division is composed largely of experienced map draughtsmen from Great Britain, who were trained in government and commercial map-publishing institutions there, suitably trained men being difficult to obtain in Canada. Of late years this source of supply has failed, and the Survey, with the concurrence of the Civil Service Commission, has undertaken to train recruits for itself. This plan was put in effect on September 20, 1927, by the employment of two student map draughtsmen. At the end of the present fiscal year four of these apprentices are in training, and so far the plan has exceeded expectations.

FIELD WORK

The following table of the number of field parties sent out each year since 1920 affords a rough idea of the increasing amount of work done:

Year	Number of parties	Year	Number of parties
1920.....	39	1925.....	54
1921.....	43	1926.....	53
1922.....	39	1927.....	50
1923.....	40	1928.....	53
1924.....	47	1929.....	56

The corresponding cost of the Geological Survey is shown in a table in the Annual Report for 1927-28.

The work done by the fifty-six parties sent out in 1929 is explained briefly in succeeding sections of this report. One new feature of this program is that two of the parties mentioned were engaged upon geophysical investigations. The application of physics to the study of geological problems in Canada is, in some respects, not new or novel, for the dip-needle and the magnetometer have been used here for many years, and quite successfully, in locating deposits of iron ore and other magnetic substances. Within the last twenty years, however, a great deal of attention has been given in other countries to the investi-

gation of ore deposits and other geological features by means of their physical behaviour—electrical, gravitational, radioactive, and mechanical (transmission of vibrations). Many ingenious methods have been devised.

These new geophysical methods have been introduced into Canada within the last ten years. They have not yet been used extensively, and in perhaps a majority of trials they have been disappointing. This condition, however, is probably transient. Geophysical methods appear to be going through a difficult but normal transition from an experimental stage to that of a recognized applied science. The methods and apparatus have been devised by physicists and, necessarily as yet, used by physicists because no one else understands them. Physicists, accustomed to the simple and controllable conditions obtainable in the laboratory, have not understood well, and have perhaps underestimated, the complex geological conditions encountered in field trials. Methods have not always been adapted to the particular geological conditions, and wrong interpretations have been made. A good deal of secrecy and ignorance attends the new science in the present stage. For their financial advantage the companies engaged in geophysical investigations protect their inventions by patents and secrecy. Their clients are correspondingly unable to judge for themselves regarding the merits of geophysical work and are prone to extremes of opinion. It is to be remembered, too, that this branch of geophysics is a very young science, that most of the apparatus and methods are still imperfect, and that standards for practice and equipment have not yet been established. But these disadvantages will disappear if applied geophysics continue to prove as useful as present experience leads one to expect.

It appears quite clear that geophysical investigations should be directed and interpreted by persons with an adequate knowledge of the geological sciences. Almost every field investigation will present its own peculiar geological conditions that will determine which geophysical method or methods are most suitable and how they should be applied, and the geophysical data obtained will be of little value until they are translated into geological terms. It is probable that much of the geophysical apparatus will ultimately become so perfected and simplified that it can be used by the geologist or geologically trained engineer without the assistance of the physicist. In the past the physicist has provided the geologist with more than one new appliance and new technique, such as the polarizing microscope, and there seems no reason whatever to doubt that, in the same way, geophysical methods and apparatus will ultimately become another valuable adjunct for the geologist, and geophysics become as much a part of the curriculum for geologists and engineers as is petrography. Application of other principles and invention and improvement of apparatus will, of course, remain functions of the physicist.

Viewing geophysical work from this standpoint, the Geological Survey commenced the study of the new methods—electrical, gravitational, and vibrational—in 1928. Professor Lachlan Gilchrist, of the Department of Physics, University of Toronto, and Dr. J. B. Mawdsley undertook in collaboration with a number of geophysical companies to ascertain the capabilities and limitations of the various electrical principles then being employed in Canada. This investigation was undertaken for the immediate purpose of affording mining men some impartial information regarding where geophysical methods might be used and what results might be expected. A report upon it is now in press. Study was also commenced upon gravimetric (torsion balance) methods in co-operation with the Dominion Observatory, Department of the Interior. Mr. A. H. Miller, of the Observatory staff, was sent to Europe during the summer to study the apparatus and methods in use there, preparatory to actual experimentation with these methods in Canada. In this connexion it is desired to express the cordial thanks of the Geological Survey and of the Dominion Observatory to Sir John Flett, Director of the Geological Survey of Great Britain; to Dr. Paul

Krusch, Director of the Geological Survey of Germany; the directors of the observatories in both these countries and many others in Europe; also to the officials of the geophysical prospecting companies above named for assistance rendered.

In 1929 the investigation of electrical and magnetic methods was continued by a Geological Survey party comprising Professor Gilchrist, Dr. Mawdsley, Dr. A. S. Eve, of the Department of Physics, McGill University, and his colleague, Dr. A. D. Keys, in collaboration with a party from the United States Bureau of Mines, under Dr. W. T. Lee. Professor Eve and Dr. Keys had been engaged in this work for the United States Bureau of Mines for two seasons and undertook work for the Survey with the advantage of this previous experience. The combined party tested a variety of electrical methods at the Mammoth cave, Kentucky; at the Falconbridge mine, Sudbury; and again at the Abana mine, Rouyn district.

Mr. Miller commenced to apply the information obtained in Europe the previous season by undertaking torsion-balance and magnetometer surveys of known examples of the chief types of geological structures to which the gravimetric method is applicable. These types of structures are faults, bodies of abnormal density, and folds. The Gloucester fault near Ottawa was surveyed.

Work will be continued in 1930.

OFFICE WORK

Under this head it is desired to refer specially to the output of geological and topographical maps during the fiscal year. A list of these maps is given in the section relating to the Draughting Division. About twice as many were published as usual. Credit for this is due, within the Survey, to Mr. Alexander Dickison and Mr. C. O. Senecal, of the Draughting Division, Mr. W. H. Boyd, of the Topographical Division, Mr. G. A. Young, of the Geological Division, and Mr. G. G. Clarke, of the Photographic Division, and to the members of those divisions. It is also due in an important measure to the Surveys Branch of the Department of National Defence and to the Topographical Surveys Branch of the Department of the Interior for the use of base maps made by those organizations, and to the Department of Public Printing and Stationery for expeditious publication work of excellent quality.

GEOLOGICAL DIVISION

Yukon

G. A. Young, Chief Geologist, reports as follows:

W. E. Cockfield, assisted by E. J. Lees, commenced the topographical and geological mapping of Laberge quadrangle (latitudes 61° to 62° , longitudes 134° to 136°), southern Yukon. Silver-lead, placer gold, and, possibly, copper-bearing deposits, occur within the map-area. The work when completed will result in the publication of a geological and topographical map, on a scale of 4 miles to 1 inch.

During the field season Mr. Cockfield visited several of the active mining camps of Yukon and will report upon them in Summary Report 1929, Part A. An effort will be made to continue annually this review of mineral developments on Yukon.

British Columbia

F. A. Kerr completed the topographical and geological survey, begun in 1926, of the more accessible territory bordering Stikine and Iskut rivers and lying mainly within three quadrangles contained by latitudes $56^{\circ} 30'$ and $58^{\circ} 00'$,

and longitudes 131° and 132° . The region is traversed by the east margin of the Coast Range batholith and, therefore, is of prospective importance as a mineral-bearing district. A preliminary account of the work accomplished in 1929 will appear in Summary Report 1929, Part A. The three map-sheets on a scale of 2 miles to 1 inch are being prepared for publication. Mr. Kerr also visited the section on Taku river adjacent to the International Boundary where important mineral discoveries have recently been made. A report on this section will appear in Summary Report 1929, Part A.

George Hanson continued the study of the geology and mineral resources of Alice Arm mineral area. Various types of mineral deposits bearing silver, silver lead, zinc, copper, and molybdenite are present and are the subject of renewed interest. The geological work being prosecuted is mainly confined to two map-areas bounded by latitudes $55^{\circ} 30'$ and $55^{\circ} 45'$ and longitudes 129° and 130° , of which geological and topographical maps on a scale of 1 mile to 1 inch will be issued when field work is completed.

A. H. Lang, under the direction of George Hanson, geologically and topographically mapped an area of about 100 square miles in the vicinity of Owen lake. The resulting map and a report dealing with the geology and mineral resources of the area will appear in Summary Report 1929, Part A.

H. C. Gunning geologically explored an area of about 700 square miles in northern Vancouver island, extending west from Nimpkish lake to Quatsino sound. Copper-bearing and lead-zinc deposits of merit occur within the area. One large copper deposit is now approaching the production stage. A geological map, on a scale of 2 miles to 1 inch, and a report on the geology and mineral resources will appear in Summary Report 1929, Part A.

C. E. Cairnes commenced the study and mapping of the geology of the Trinity quadrangle bounded by latitudes $50^{\circ} 15'$ and $50^{\circ} 30'$ and longitudes $118^{\circ} 30'$ and $119^{\circ} 00'$. This area was chosen as being representative of the geologically, comparatively unknown country stretching westward from Upper Arrow lake towards Kamloops. Mr. Cairnes also examined in detail the gold occurrences within a belt of country crossing Coquihalla river about 10 miles northwest of Hope. Much interest has been displayed in these gold-bearing deposits and a full report concerning them will appear in Summary Report 1929, Part A.

H. S. Bostock continued geological mapping and study of three quadrangles in Hedley district lying between latitudes $49^{\circ} 00'$ and $49^{\circ} 30'$ and longitudes $119^{\circ} 30'$ and $120^{\circ} 30'$. The work when completed will be issued in the form of a report accompanied by three geological maps on a scale of 1 mile to 1 inch. The results of a detailed study of the Nickel Plate mine at Hedley will appear in Summary Report 1929, Part A.

J. F. Walker continued geological mapping and investigation of the mineral resources of the Salmo quadrangle (latitudes $49^{\circ} 00'$ to $49^{\circ} 15'$, and longitudes $117^{\circ} 00'$ to $117^{\circ} 30'$). A preliminary report on a number of the gold-bearing properties within this map-area will appear in Summary Report 1929, Part A.

Alberta

B. R. MacKay investigated and mapped, geologically and in some cases also topographically, various coal-bearing areas in the vicinity of and northwest of Brûlé. This work included examinations of a considerable area around Pocatontas, of an area in the Prairie Creek section, of other areas in Hay-River basin, and a reconnaissance of Smoky River coal area. The results obtained will be incorporated in a memoir treating of the coal fields of the district extending northwesterly from Brazeau to Hay rivers.

J. F. Caley, under the direction of C. S. Evans, made a geological reconnaissance of a part of Wapiti River basin. An account of the results obtained will appear in Summary Report 1929, Part A.

G. S. Hume completed the geological mapping of Turner Valley quadrangle (latitudes $50^{\circ} 30'$ to $50^{\circ} 45'$, longitudes $114^{\circ} 00'$ to $114^{\circ} 30'$), of the east half of Bragg Creek quadrangle (latitudes $50^{\circ} 45'$ to $51^{\circ} 00'$, longitudes $114^{\circ} 30'$ to $115^{\circ} 00'$), and of two townships bordering Turner Valley map-area on the north. The field work disclosed a structural feature that extends from Highwood to Elbow rivers, and is of great importance to those engaging in the search for oil and gas. An account of this structure and other important features of the general district will appear in Summary Report 1929, Part B. To meet the immediate needs of the many who are interested in Turner Valley district, arrangements are being completed that will permit the supplying, at a moderate charge, of hand-coloured geological maps, on a scale of 1 mile to 1 inch, of the various areas mentioned above.

Saskatchewan

F. H. McLearn continued the study and mapping of the geology of the southern part of an area embracing most of southern Saskatchewan (latitudes 49° to 52° , longitudes 102° to 109°). An account of some of the results obtained will appear in Summary Report 1929, Part B.

P. S. Warren continued the study and mapping of the geology of a large area in southern Saskatchewan south of latitude 52° . When this work and that being conducted by Mr. McLearn in the district to the south, are completed the results will be incorporated in a map (Regina sheet) on a scale of 8 miles to 1 inch, and a report dealing with southern Saskatchewan. A report by Mr. Warren, giving an account of the area investigated by him, will appear in Summary Report 1929, Part B.

W. A. Johnston and R. T. D. Wickenden commenced the investigation of the surface geology, including the soils, of southern Saskatchewan within the limits of the proposed Regina map-sheet (latitudes 49° to 52° , longitudes 102° to 109°).

H. E. Simpson and W. A. Johnston investigated the underground water supply for Regina. The work resulted in the locating of what seems likely to prove an adequate additional source of water for the city. A report by Mr. Simpson on the results obtained will appear in Summary Report 1929, Part B.

J. R. Marshall with J. Satterly commenced the geological study of, and mapping of, Pelican Narrows quadrangle (latitudes 55° to 56° , longitudes 102° to 104°). This area lies within the area of Precambrian rocks known as the Canadian Shield, to which so much attention is being given by the mining public. The work, when completed, will result in the publication of a geological map on a scale of 4 miles to 1 inch.

S. H. Ross made a geographical and geological survey of a limited area in the vicinity of Rottenstone lake, northern Saskatchewan, where mineral deposits of prospective importance have been discovered.

Manitoba

W. A. Johnston completed the study and mapping of the surface deposits—including soils—of the greater part of southern Manitoba contained within the limits of the Winnipeg map-sheet (latitudes 49° to 52° , longitudes 95° to 102°). A map, called the Winnipeg sheet, on a scale of 8 miles to 1 inch, covering this district and presenting the results of field work, is in course of preparation.

S. R. Kirk continued the study and mapping of the geology of southern Manitoba and adjacent parts of Saskatchewan lying within the limits of the Winnipeg map-sheet. A report on the results of the investigation of the Cretaceous strata will appear in Summary Report 1929, Part B.

J. F. Wright studied and mapped in detail a part of the gold-bearing Beresford-Rice Lakes district. He also geologically mapped extensions of the areas previously mapped in Oiseau River district and visited various localities in southeastern Manitoba where tin-bearing deposits have been found. An account of some of the more important gold-bearing deposits and of the tin-bearing occurrences will appear in Summary Report 1929, Part B.

E. Antevs studied the glacial and other surface deposits in areas bordering the Hudson Bay railway.

North West Territories

C. H. Stockwell geologically mapped for publication on a scale of 4 miles to 1 inch, part of a quadrangle (latitudes 62° to 63° , longitudes 110° to 112°) embracing an eastern part of Great Slave lake. Lead-zinc deposits occur in the region and the study of the general geology of the area promises to yield results of much value. A preliminary account of the results obtained will appear in Summary Report 1929, Part B.

L. J. Weeks commenced the geographical and geological mapping, for publication on a scale of 4 miles to 1 inch, of a quadrangle (latitudes 62° to 63° , longitudes 92° to 94°) extending southward from Rankin inlet on the west coast of Hudson bay. A brief report on general conditions within the field will be included in Summary Report 1929, Part B. Mineral deposits have been found, and when the territory becomes more easily accessible it will probably be actively prospected.

Ontario

T. L. Tanton continued the geological and geographical survey of the Shebandowan quadrangle (latitudes $48^{\circ} 30'$ to $48^{\circ} 45'$, longitudes $90^{\circ} 00'$ to $90^{\circ} 30'$). Various types of mineral deposits occur within the map-area and it was expected that the study of the geology of the district would yield results of importance.

H. M. Bannerman continued the geological and geographical survey of the Rush Lake quadrangle (latitudes $47^{\circ} 45'$ to $48^{\circ} 00'$, longitudes $82^{\circ} 00'$ to $82^{\circ} 30'$), in Woman River basin. He also examined various lead-zinc, copper, and copper-gold deposits in Cunningham, Chester, Keith, and Heenan townships. A report on the mineral deposits examined in these townships and within Rush Lake quadrangle will appear in Summary Report 1929, Part C.

T. T. Quirke continued the geological study and mapping of a quadrangle (latitudes $45^{\circ} 15'$ to $45^{\circ} 30'$, longitudes $79^{\circ} 30'$ to $80^{\circ} 00'$) east of Parry Sound. The geological investigations being carried out are yielding results of much scientific interest, as well as practical value.

M. E. Wilson completed the geological mapping of the Westport quadrangle (latitudes $44^{\circ} 30'$ to $44^{\circ} 45'$, longitudes $76^{\circ} 00'$ to $76^{\circ} 30'$), and commenced the geological study and mapping of the Perth quadrangle (latitudes $44^{\circ} 45'$ to $45^{\circ} 00'$, longitudes $76^{\circ} 00'$ to $76^{\circ} 30'$). The publication scale of the map-sheets is to be 1 mile to 1 inch. The systematic mapping of the geology of this part of the province permits a better valuation of the various types of metallic and non-metallic mineral deposits so characteristic of the region.

Miss A. E. Wilson revised and completed the geological mapping of the southern part of the Thurso quadrangle (latitudes $45^{\circ} 30'$ to $45^{\circ} 45'$, longitudes $75^{\circ} 00'$ to $75^{\circ} 30'$) and completed the geological mapping of the Cornwall

quadrangle (latitudes $45^{\circ} 00'$ to $45^{\circ} 15'$, longitudes $74^{\circ} 30'$ to $75^{\circ} 00'$). The work in the two quadrangles has afforded new information regarding the structure and stratigraphy of the Ordovician strata.

D. C. Maddox and Miss A. E. Wilson commenced the revision of the geology of the Ottawa (city) quadrangle. This work, it is proposed, is to be carried to completion incidentally to regular field work elsewhere.

Quebec

H. C. Cooke revised the geological mapping of the Kinojevis and Clericy quadrangles (latitudes $48^{\circ} 00'$ to $48^{\circ} 30'$, longitudes $78^{\circ} 30'$ to $79^{\circ} 00'$) and part of the Opasatika quadrangle (latitudes $48^{\circ} 00'$ to $48^{\circ} 15'$, longitudes $79^{\circ} 00'$ to $79^{\circ} 30'$). The three map-sheets, on a scale of 1 mile to 1 inch, represent an important part of Rouyn mineral district, western Quebec.

R. Thomson geographically and geologically mapped the northeastern part of the Thurso quadrangle (latitudes $45^{\circ} 30'$ to $45^{\circ} 45'$, longitudes $75^{\circ} 00'$ to $75^{\circ} 30'$). This completes the field work necessary to permit publication of a geological map-sheet, on a scale of 1 mile to 1 inch, of this mineral-bearing district.

H. W. McGerrigle, under supervision of T. H. Clark, completed the geological study and mapping of the Lacolle quadrangle (latitudes $45^{\circ} 00'$ to $45^{\circ} 15'$, longitudes $73^{\circ} 00'$ to $73^{\circ} 30'$). Publication scale of the map-sheet is to be 1 mile to 1 inch. This work is one item of the detailed investigation of the geology of southeastern Quebec.

C. Tolman explored geographically and geologically a district southwest of Chibougamau lake, chiefly along Obatogamau river between latitudes $49^{\circ} 30'$ to $50^{\circ} 00'$, and longitudes $74^{\circ} 00'$ to $75^{\circ} 30'$. The district is part of an extensive region whose mineral-bearing possibilities are of public interest. An account of geological results obtained will appear in Summary Report 1929, Part C.

G. W. Crickmay, under the supervision of F. J. Alcock, commenced the study and mapping of the geology of that part of Matapedia River valley and tributary areas lying within two quadrangles bounded by longitudes $67^{\circ} 00'$ and $67^{\circ} 30'$, and latitudes $48^{\circ} 00'$ and $48^{\circ} 30'$.

C. H. Kindle, under the supervision and with the assistance of E. M. Kindle, continued the geographical and geological mapping of the more accessible territory bordering Chaleur bay from the vicinity of Port Daniel east to Percé. The field work when completed will permit the issuing of a series of standard map-sheets on a scale of 1 mile to 1 inch.

New Brunswick

F. J. Alcock commenced and nearly completed the geographical and geological mapping of the territory bordering Chaleur bay from southeast of Campbellton to east of Bathurst. The districts geologically surveyed lie within the limits of three standard map-sheets which it is proposed to publish on a scale of 1 mile to 1 inch. Mr. Alcock also examined a number of mineral occurrences elsewhere within the province.

Nova Scotia

E. R. Faribault continued the geological mapping of the Digby quadrangle (latitudes $44^{\circ} 30'$ to $44^{\circ} 45'$, longitudes $65^{\circ} 30'$ to $66^{\circ} 00'$) and commenced similar work in the Belliveau quadrangle. He also visited various mineral occurrences in western Nova Scotia.

W. A. Bell commenced the revision of the geological mapping, for publication on a scale of 1 mile to 1 inch, of the Sydney quadrangle (latitudes $46^{\circ} 00'$

to $46^{\circ} 15'$, longitudes $60^{\circ} 00'$ to $60^{\circ} 30'$) which includes a considerable part of the Sydney coal field. He also spent a short time in the Pictou coal field collecting supplementary information needed to complete the investigation of this field.

G. W. H. Norman completed the geographical and geological mapping of the Ainslie quadrangle (latitudes $46^{\circ} 00'$ to $46^{\circ} 15'$, longitudes $61^{\circ} 00'$ to $61^{\circ} 30'$) for publication on a scale of 1 mile to 1 inch. He also made a detailed survey of the Mabou coal field which lies within the quadrangle.

General

A. S. Eve, L. Gilchrist, and D. A. Keys, physicists, and J. B. Mawdsley, geologist, continued an investigation of electrical geophysical methods of prospecting. This work was undertaken in 1928 by Mr. Gilchrist and Mr. Mawdsley for the purpose of comparing at some well-known ore deposit the capabilities and limitations of the various electrical principles in commercial use, much uncertainty and difference of opinion about these methods having arisen among mining men. The Abana mine, in Rouyn district, was selected, and four geophysical companies co-operated, namely the Schlumberger, Radiore, Swedish-American, and Alderson-MacKay. This comparison test was concluded in 1929 and the balance of the season was devoted to further independent investigation of the possibilities of electrical methods. Professor Eve and Mr. Keys had been engaged for two years previously by the United States Bureau of Mines on work of the same kind and brought valuable information and experience to the investigations in Canada. The field work of 1929 was also done in collaboration with a party from the United States Bureau of Mines under Dr. W. T. Lee. Attention was devoted principally to a study of the penetration underground of radio waves, a principle upon which one of the geophysical methods of searching for ore deposits is based. This was carried out at the Mammoth cave, in Kentucky, where uniquely favourable conditions for experimentation exist. The double party then moved to Sudbury, where various methods were tested on Falconbridge metal-copper ore deposit, which is also specially suited for the purpose.

A. H. Miller commenced an investigation of gravimetric and magnetic methods. He had, during the preceding summer, visited Europe to become acquainted with what is being done there with these methods, especially in England and Germany. The next step was to apply the methods to known examples of the main types of geological features to which gravimetric methods are applicable in order to obtain some measure of the effects of such features before undertaking an investigation of unknown features. Work was commenced upon the Gloucester fault, near Ottawa.

TOPOGRAPHICAL DIVISION

W. H. Boyd, Chief Topographical Engineer, reports:

British Columbia

R. Bartlett completed topographical mapping of an area comprising about 200 square miles in the vicinity of Alice Arm, constituting part of two 1-mile quadrangles bounded by latitudes $55^{\circ} 15'$ to $55^{\circ} 45'$ and longitudes 129° to $129^{\circ} 30'$. Map scale, 1 inch to 1 mile. Contour interval 100 feet.

S. M. Steeves continued topographical mapping of the Salmo sheet, latitudes $49^{\circ} 00'$ to $49^{\circ} 15'$, longitudes $117^{\circ} 00'$ to $117^{\circ} 30'$. Map scale, 1 inch to 1 mile. Contour interval 100 feet. Owing to bad smoke conditions from forest fires, it was not possible to complete the field work necessary for the whole sheet; about 122 square miles remain to be done.

J. V. Butterworth commenced the topographical mapping of the east half of the Cranbrook sheet, latitudes $49^{\circ} 30'$ to $49^{\circ} 45'$, longitudes $115^{\circ} 30'$ to $116^{\circ} 00'$. Map scale, 1 inch to 1 mile. Contour interval 100 feet. The west half of this sheet was completed in 1925 by A. C. T. Sheppard. More field work is required to complete the east half.

Alberta

D. A. Nichols completed the topographical mapping of the east half of the Wildcat Hills sheet, latitudes $51^{\circ} 15'$ to $51^{\circ} 30'$, longitudes $114^{\circ} 30'$ to $115^{\circ} 00'$. Map scale, 1 inch to 1 mile. Contour interval 25 feet.

W. H. Miller commenced the topographical mapping of the Brûlé sheet, latitudes $53^{\circ} 15'$ to $53^{\circ} 30'$, longitudes $117^{\circ} 30'$ to $118^{\circ} 00'$. Map scale, 1 inch to 1 mile. Contour interval 100 feet. About one-half of the sheet remains to be done.

R. C. McDonald completed the triangulation control for the Brûlé sheet and commenced the topographical mapping of the Nordegg sheet, latitudes $52^{\circ} 15'$ to $52^{\circ} 30'$, longitudes $116^{\circ} 00'$ to $116^{\circ} 30'$. Map scale, 1 inch to 1 mile. Contour interval 100 feet.

A. C. T. Sheppard visited the parties, with the exception of the party under D. A. Nichols, working in British Columbia and Alberta, for the purposes of inspection and advising on any matters relating to field work.

Ontario

A. G. Haultain completed the control surveys for the Chelmsford sheet, latitudes $46^{\circ} 30'$ to $46^{\circ} 45'$, longitudes $81^{\circ} 00'$ to $81^{\circ} 30'$. Map scale, 1 inch to 1 mile. Details of drainage, etc., in this area will be filled in from vertical aerial photographs.

Quebec

A. C. Tuttle carried on geographical surveys in the Chibougamau sheet, latitudes $49^{\circ} 45'$ to $50^{\circ} 00'$, longitudes $74^{\circ} 00'$ to $74^{\circ} 30'$.

H. N. Spence completed some additional control surveys in the Opasatika sheet, latitudes $48^{\circ} 00'$ to $48^{\circ} 15'$, longitudes $79^{\circ} 00'$ to $79^{\circ} 30'$.

New Brunswick

J. W. Spence completed the topographical mapping of the Moncton sheet, latitudes $46^{\circ} 00'$ to $46^{\circ} 15'$, longitudes $64^{\circ} 30'$ to $65^{\circ} 00'$. Map scale, 1 inch to 1 mile. Contour interval 50 feet.

H. N. Spence completed certain control surveys in the Bathurst sheet, latitudes $47^{\circ} 30'$ to $47^{\circ} 45'$, longitudes $65^{\circ} 30'$ to $66^{\circ} 00'$; in the Belledune sheet, latitudes $47^{\circ} 45'$ to $48^{\circ} 00'$, longitudes $65^{\circ} 30'$ to $66^{\circ} 00'$; and in the Charlo sheet, latitudes $47^{\circ} 45'$ to $48^{\circ} 00'$, longitudes $66^{\circ} 00'$ to $66^{\circ} 30'$.

Nova Scotia

J. A. Macdonald completed the control surveys for the Church Point sheet, latitudes $44^{\circ} 15'$ to $44^{\circ} 30'$, longitudes $66^{\circ} 00'$ to $66^{\circ} 30'$; and for the Port Mouton sheet, latitudes $43^{\circ} 45'$ to $44^{\circ} 00'$, longitudes $64^{\circ} 30'$ to $65^{\circ} 00'$. Details of drainage, etc., on these sheets will be filled in from vertical aerial photographs.

K. G. Chipman visited the parties working in New Brunswick and Nova Scotia for the purposes of inspection and advising on any matters relating to field work.

OFFICE WORK

The control and computing section, under S. C. McLean, which was organized for the purpose of computing and adjusting the triangulation and

traverse control carried out by the various field parties, has accomplished a great amount of work, and materially assisted in speeding up the whole work of the division by relieving the topographical engineers of a considerable amount of routine work, thereby enabling these engineers to put more time on the actual work of mapping.

During the year this section carried out and completed the duplicate computations, checking, and adjusting of one net of secondary triangulation, three nets of tertiary triangulation, and 1,000 miles of traverse. In addition to this, considerable back work was completed, and the correlation, adjustment, and filing of a mass of information for general use was commenced.

D. A. Nichols continued his work in physiography and in assembling the nucleus of a geographical section for the National Museum.

MINERALOGICAL DIVISION

Eugene Poitevin, Chief of the Division, reports:

One of the prime functions of the Division of Mineralogy is to investigate the physical and chemical properties, mode of occurrence, genesis, associations, and economic applications of Canadian minerals. It is the duty of the mineralogists to examine and report upon the nature and commercial value of ores, minerals, and rocks submitted by prospectors, property owners, and the public generally.

FIELD WORK

At various times during the year, and especially in the summer, Mr. Poitevin has been carrying on some detailed geological and mineralogical work at the asbestos mines in the vicinity of Thetford, Que.

R. J. C. Fabry, rock analyst of the division, towards the end of August spent ten days in the field under the direction of Mr. M. E. Wilson. The object of this field work was to have him become acquainted with the field methods of the Geological Survey.

A. T. McKinnon left Ottawa on June 3 to return on August 23. During that time he visited numerous mineral localities in Ontario, Quebec, New Brunswick, and Nova Scotia, collecting minerals for museum and educational purposes.

LABORATORY WORK

More than three thousand rock and mineral specimens were received from various outside sources. These were identified and reported on as to their possible commercial value. During the fiscal year just ended more than twenty-five hundred reports were issued by Eugene Poitevin and H. V. Ellsworth. These do not include numerous verbal reports given to the visiting public.

Eugene Poitevin and R. J. C. Fabry have completed their study of the lithium minerals from the pegmatites of the Silver Leaf property in southern Manitoba.

Eugene Poitevin has, in addition, completed the study of a new mineral, robertsonite, from British Columbia, and has also completed the revised study of the ptilolite group of minerals.

H. V. Ellsworth assisted in the determination of minerals sent in for identification and report as to commercial possibilities. He, also, spent considerable time in consultations and personal interviews with prospectors and others. A good deal of work was involved in connexion with the preparation for publication of his report on rare element minerals. During the absence of Mr. Poitevin on field duty he took charge of the work of the Division of Mineralogy. In addition, during the year he made a study of a deposit of cobalt nickel minerals occurring on Calumet island, of cenosite, a very rare yttrium mineral, and of a Canadian

occurrence of gadolinite. He also co-operated with the Ore Dressing Division, Mines Branch, in the concentration of a large shipment of uranium ores by the Ontario Radium Corporation and made about one hundred and thirty electroscopic determinations of the uranium content of the ores and concentration products. In addition he made many electroscopic and other special tests for rare elements in minerals sent in by prospectors.

R. J. C. Fabry has completed chemical analyses of the following minerals and rocks:

Thomsonite from Johnston asbestos mine, Thetford, Coleraine township, Megantic county, Que.

Stannite, Snowflake mine, Albert Canyon, B.C.

Robertsonite, Penticton, B.C.

Aphrodite, Jacob asbestos mine, Thetford Mines, Que.

Pink diopside, Montreal chrome pit, Coleraine township, Megantic county, Que.

Green diopside, Orford, Brompton Lake, Que.

Two samples of vesuvianite—one from American chrome pit, one from Southwark asbestos pit, Coleraine township, Megantic county, Que.

Four rocks of granite type, from T. T. Quirke.

White serpentine, Megantic Lambly mine, Ireland township, Megantic county, Que.

Chlorite, Montreal chrome pit, Coleraine township, Megantic county, Que.

Fine asbestos, King asbestos mine, Que.

Coarse asbestos, Vimy Ridge asbestos mine, Que.

He also completed other qualitative analyses connected with the routine of the division.

MUSEUM WORK

Owing to the limited staff and the pressure of more urgent work, it has been impossible to give this important branch of the division the attention it deserves. However, several museum cases were added to the National Museum; a travelling collection for the Geological Survey has been assembled; museum cases at 227 Sparks street were re-arranged, and a large number of specimens were classified in filing cabinets. A large number of very fine specimens were added to the collections by purchase and donation. An itemized list of these is given in the Annual Report of the National Museum.

EDUCATIONAL COLLECTIONS

The number of collections distributed to educational institutions has been maintained.

This year more than 7,500 minerals and 138 bags of specimens have been distributed, as follows:

Province	Standard	Grade 2	Grade 3	Miscel- laneous	Minerals, pros- pectors	Rocks, pros- pectors	Mineral chips
British Columbia.....	1	0	1	0	4	0	0
Alberta.....	0	0	1	0	1	0	0
Saskatchewan.....	0	0	0	1	5	0	0
Manitoba.....	0	1	1	2	3	0	0
Ontario.....	9	5	46	13	45	6	1
Quebec.....	3	0	5	5	17	1	1
New Brunswick.....	0	0	3	1	4	0	1
Nova Scotia.....	1	0	0	0	1	0	0
Foreign.....	0	1	1	8	24	0	0
	14	7	58	30	104	7	3

Total number of collections distributed = 221.

These collections were assembled by Mr. A. T. McKinnon and required almost 20 tons of rocks and minerals for their preparation.

PALÆONTOLOGICAL DIVISION

E. M. Kindle, Chief of Division, reports:

FIELD WORK

W. A. Bell commenced detailed mapping of Sydney coal field north and west of the published Sydney map No. 1767. A fuller reference to this and other field work by officers of this division is made in the section relating to the Geological Division.

E. M. Kindle was engaged in determining formation and systemic boundary lines in Gaspé peninsula. Work done was limited chiefly to the Percé to Port Daniel map-area near the eastern end of the peninsula, and to the Escuminac-Maria map-area bordering Chaleur bay. Mapping in Percé area has been carried on by C. H. Kindle under the supervision of E. M. Kindle.

F. H. McLearn continued geological mapping of the area in southern Saskatchewan between latitudes 49° - 52° and longitudes 102° - 109° , begun in 1927. Districts now completed within this area are: (a) Twelvemile Lake-Willow-bunch; (b) Fir Mountain; (c) Wood Creek; (d) Keoghs; (e) Rocky Creek, of interest for its dinosaur remains.

Miss A. E. Wilson spent the first part of the summer in mapping the southern section of the Thurso sheet, in which the Palæozoic rocks occur. The field work on the geological map of Cornwall area was completed during the latter part of the summer.

C. M. Sternberg was engaged in collecting fossil plants and invertebrates in southern Saskatchewan.

OFFICE WORK

A large share of the office work of the division has been devoted to the unusually large collections of fossils sent in to be used as the basis of reports determining stratigraphic sequence in areas that are being mapped.

W. A. Bell supplied the following reports: (a) Report on fossil plants from Alberta, submitted by Mr. B. R. MacKay; (b) Report on fossil plants from British Columbia, submitted by Mr. C. E. Cairnes; (c) Report on fossil plants from Alberta, submitted by Mr. C. S. Evans; (d) Report on collections of fossil plants from Campbellton, N.B., and from Gaspé, submitted by Mr. E. M. Kindle; (e) Partial report on fossil plants from Saskatchewan, submitted by Mr. F. H. McLearn, placed in hands of Dr. E. W. Berry along with bulk of collection; (f) Report on stratigraphy of oil and gas-bearing formations in the Maritime Provinces, for Economic Geology series "Report on Oil and Gas in eastern Canada," by Mr. G. S. Hume. In addition to reports on fossil plants for other field officers he was engaged in preparation of a memoir on the Pictou coal field.

E. M. Kindle has prepared reports on a number of collections submitted for the purpose of dating the formations represented. Some work has also been done on sea bottom sediments collected by cable repair ships in the area south and southeast of Newfoundland.

The office work of F. H. McLearn included: reports on collections of Mesozoic fossils submitted by field officers of the Geological Survey; continuation of a preliminary study of the faunas of the Upper Triassic Schooler Creek formation of the western part of Peace river and the preparation of a preliminary paper on this subject; a continuation of the study of Jurassic faunas of Skidegate inlet, a second contribution on which is now nearing completion; the plotting and assembling of notes on field work in southern Saskatchewan and the writing of a report on southern Saskatchewan for the Summary Report of the Geological Survey.

Miss A. E. Wilson continued work on the type catalogue. Considerable time was spent in reporting on the collections of Ordovician and Silurian fossils submitted by field officers. Work was completed on the report of the Cornwall area, including the fossils.

C. M. Sternberg has continued preparatory work on vertebrate collections and has submitted manuscripts on certain dinosaur collections.

Miss M. A. Fritz of the Department of Geology, Toronto University, completed sorting and indexing the old collections of invertebrate fossils which have been in storage, making it possible to locate any lots that may be required for reference.

COLLECTIONS

Reference to collections received and Museum exhibits has been made in the Annual Report of the National Museum.

BORINGS DIVISION

D. C. Maddox, Acting Chief of the Borings Division, reports:

The routine work of collecting information and samples from wells drilled for oil and gas and for water, from all parts of the Dominion, was continued during 1929. The filing of records, the organized storage of samples, and the work of sample examination were continued. During 1929 all samples were gone over and listed and tables showing their location were prepared.

The number of wells from which samples have been obtained is now about 800. Due to the enormous increase in the number of samples received, which was slightly over twice the number received in 1928—in itself a record to that date—the question of storage became acute. The present congestion may necessitate some system by which a limited number of samples may have to be rejected after examination and bottling and the passing of a certain time interval thereafter.

Three student assistants were employed during the summer months to help cope with the great number of samples coming in. One student assistant spent a few weeks in the Toronto office of Colonel Harkness, Gas Commissioner for Ontario, plotting on maps of the Borings Division the positions of oil and gas wells in Ontario. The positions of several thousand of such wells were plotted and the writer wishes to express his thanks to Colonel Harkness for the facilities provided for this work and for the help and advice given.

A limited amount of research work was done in the laboratory of the Borings Division, chiefly in separating heavy minerals contained in the sediments, and the mounting of them for future reference. About two hundred slides of this material were made during 1929 by M. Mahoney and F. J. Fraser, bringing the total to about six hundred. Time has not yet permitted many detailed reports to be made on the slides, but they will form a basis for future work. During the spring and autumn Mr. Fraser continued the work conducted in previous years on the sediments of southern Saskatchewan, brought in by Mr. F. H. McLearn. This work involves the determination of the heavy mineral content and the mechanical analysis of the sediments and may prove of value to the division in the future as providing data from which key horizons may be located. A certain amount of work was also done on the mechanical analysis of oil sands, examination of water, etc.

R. T. D. Wickenden continued the work begun in 1928 on western Cretaceous foraminifera, and the Borings Division co-operated with him in the matter of supplying samples of sediments obtained from wells. D. C. Maddox spent two weeks in field work with Mr. M. E. Wilson in Perth area, to study methods of outcrop mapping. In co-operation with Miss A. E. Wilson a certain amount of time was devoted to the location and examination of excavations in Ottawa district.

Assistance from the following sources is gratefully acknowledged.

The office of the Supervisory Mining Engineer of the Department of the Interior under Mr. C. C. Ross, which supplied borings samples and much valuable information as to the exact position of wells in the Prairie Provinces; and the yield of oil, gas, and water, and other items of interest in connexion with them.

Colonel R. B. Harkness, Gas Commissioner for Ontario, for information as to oil and gas wells drilled in Ontario and for the supplying of samples from wells of unusual interest.

Provincial Department of Health and the many Federal Government organizations—especially the Department of Agriculture—and many drillers of wells, for information as to water wells and water supply.

Dr. J. A. L. Henderson of the New Brunswick Gas and Oilfields Company, who continued co-operation in the supplying of information and samples from wells put down by that company.

Mr. John Ness of the Imperial Oil Company for information as to wells put down in Minudie district, N.S.

The chief points of interest from the individual provinces follow.

Nova Scotia. The only drilling for oil and gas was the putting down of a few test holes in Minudie district, Cumberland county, by the Imperial Oil Company.

Prince Edward Island. No drilling for oil and gas reported since the abandonment of the two wells put down by the Doherty interests in 1927.

New Brunswick. Drilling for oil and gas seems to have been confined to the New Brunswick Gas and Oilfields, Limited, in the area to the south of Moncton. Samples from some of the wells put down, including some from the wells in which salt was obtained, were received.

Province of Quebec. Considerable interest was shown in the oil and gas possibilities of the area between Montreal and Quebec. This area is underlain by Palæozoic rocks of Cambrian and Ordovician age and small flows of gas have in the past been obtained in this area both from the base of the drift, from the Trenton limestone, and from some of the shales that overlie the limestone, but no commercial production has been obtained to date and no samples or records were received by the Borings Division during 1929. Twenty-eight samples from a well put down some years ago at the Cap Rouge Experimental Station were examined and bottled.

Ontario. A number of samples from oil and gas wells were examined and bottled in order to provide type sections of the areas in which the wells were put down, or to obtain information as to certain stratigraphic conditions at depth. The number of samples so examined was 3,519, distributed as follows.

*Coste No. 7.....	Lot 17, con. 7.....	Dover, East, tp.....	Kent co.....	369

The asterisk opposite the name of the well indicates that the condensed log is published in the Summary Report, Part C. The total number of samples from all sources examined was 4,096.

Prairie Provinces. The success of drilling operations in Turner Valley field and in Red Coulée and other fields seems to have stimulated the search for oil and gas to an unprecedented extent. The number of samples received was greatly in excess of the figure for 1928. The more intensive development of proved fields and the drilling of wells in areas not yet tested for oil or gas or tested only to limited depths resulted in a great number of wells being drilled in areas both in the foothills and the prairie regions. Turner Valley field continued to be the main centre of interest and its production was approximately doubled in 1929. Much development work was done in Wainwright and Ribstone fields, however, and the discovery of oil in Red Coulée area in southern Alberta has stimulated further drilling in that area. The total number of samples received was 28,988, representing a section nearly 55 miles thick.

British Columbia. Sage Creek area continued to be the centre of interest. The Crow's Nest Oil Company's well, which has been drilled intermittently for several years, was further deepened as was the B.C. Oil Company's No. 2 well. Recent developments in the oil and gas occurrences in the area would seem to indicate that further drilling will probably be undertaken. The oil and gas possibilities of other points in British Columbia are receiving the attention of operators, but no drilling of a conclusive nature was undertaken in 1929. Samples from the following wells were examined and bottled: the Crow's Nest Oil Company; the B.C. Oil and Gas Company's No. 2; the Okanagan Oil and Gas Company; the Armstrong Oil Company; and a well put down for water, in Telkwa district, by Mr. C. G. Scott.

The total number of samples received from all parts was 36,024, representing a section about $68\frac{1}{2}$ miles thick, these being distributed as under. Of these 16,803 were bottled for future reference.

3	Turner Valley sheet (west of fifth meridian); scale, 1 inch to 1 mile.....	Geology. For memoir by B. R. McKay.
4	Bragg Creek sheet (east half), west of fifth meridian; scale, 1 inch to 1 mile.....	
5	Bragg Creek sheet (east half), west of fifth meridian; scale, 1 inch to 1 mile.....	Topography.
6	Jumpingpound sheet (west of fifth meridian); scale, 1 inch to 1 mile.....	Geology.
7	Thoreau Creek area (west of sixth meridian); scale, 1 inch to 1,000 feet.....	Topography.
8	Cadomin-Luscar coal basin; scale, 1 inch to 2,000 feet..	Geology. For memoir by B. R. McKay.
		Geology. For memoir by B. R. McKay.
MANITOBA		
1	Winnipeg sheet; scale, 1 inch to 8 miles.....	Geology (surface deposits).
ONTARIO		
1	Espanola sheet, Sudbury district; scale, 1 inch to 1 mile.....	Geology.
2	Shebandowan sheet, Thunder Bay district; scale, 1 inch to 1 mile.....	
QUEBEC		
1	Rouyn Mineral area, Abitibi and Témiscamingue counties; scale, 1 inch to 4 miles.....	Geology. For memoir by H. C. Cooke, W. F. James, and J. B. Mawdsley.
NEW BRUNSWICK		
1	New Brunswick sheet; scale, 1 inch to 8 miles.....	Geology.
2	Hillsborough sheet, Albert and Westmorland counties; scale, 1 inch to 1 mile.....	
		Topography.
NOVA SCOTIA		
1	Bridgetown sheet, Annapolis county; scale, 1 inch to 1 mile.....	Topography.
2	Ainslie sheet, Inverness county; scale, 1 inch to 1 mile.....	

In addition to the foregoing, ninety-four map and related figure drawings were prepared for reproduction by zinc-cut process, for illustrating of reports, memoirs, and bulletins; a series of twelve figure drawings was also prepared for reproduction by photolithography, for memoir on "The Niagara Falls Survey of 1927," by W. H. Boyd; other draughting and associated work necessary for staff and public use amounted to one hundred and sixteen items. Duties in connexion with the Geographic Board of Canada have, as usual, been attended to.

PHOTOGRAPHIC DIVISION

G. G. Clarke, Chief of the Division, reports:

The following work has been done in this division during the fiscal year:

Contact prints, 4 x 5 to 36 x 48.....	15,235
Bromide enlargements, 4 x 5 to 40 x 72.....	972
Exposures developed, 3½ x 4½ to 6½ x 8½.....	4,763
Dry plate negatives, 4 x 5 to 11 x 14.....	548
Wet plate negatives, 8 x 10 to 24 x 30.....	204
Zinc plates, 11 x 14 to 24 x 36.....	23
Photostat copies, 7 x 11 to 11 x 14.....	66
Lantern slides, 3½ x 4.....	1,625
Photos and maps mounted.....	3,052

Total	26,488
-------------	--------

GEOLOGICAL INFORMATION AND DISTRIBUTION DIVISION

Wyatt Malcolm, Chief of the Division, reports:

The work of the division consists in answering inquiries for information regarding the geology and mineral resources of Canada. This information is imparted verbally to those making application in person, and is given to others in the form of correspondence, memoranda, and published reports and maps. A considerable part of the technical correspondence of the Geological Survey is dealt with.

Articles were prepared during the year for publication in the British press and the Canada Year Book. These articles dealt with subjects such as the importance and status of the mineral industry of Canada, and the progress made. Numerous short articles were prepared for the use of the press. In this way the readers of the newspapers and mining and scientific journals were kept informed of the nature of the publications issued from time to time by the Survey.

The publications of the Geological Survey and of the National Museum of Canada are distributed by this division. During the year, 48,766 publications, exclusive of the French editions, were distributed. Of these, 15,055 were sent to addresses on the regular mailing lists, and 33,711 were distributed in compliance with written and personal requests for named publications, or requests for general or specific information.

LIBRARY

Mrs. F. E. Forsey, Librarian, reports:

Additions to the Library during the year include:

Books purchased	650
Volumes received as gifts or exchanges	963
Pamphlets	361
Maps	443
Periodicals subscribed for	202
Periodicals and serial publications by gift and exchange.....	498

Six hundred and ninety-three books were bound and 256 maps mounted. The catalogue was increased by 3,452 cards, and the work of keeping the files complete by correspondence was continued.

The recorded loans amounted to 8,234 books and maps, in addition to those used by the many readers who consulted the library in person. Inter-library loans were made to Canadian and United States universities, to Government departments in Ottawa, and in the various provinces.

Notable progress has been made during the year in bringing the collection of photographs up to date and in cataloguing and preparing lantern slides for loan purposes. The total number of maps catalogued during the year was 554.

The filing of the Gray Herbarium Botanical Index, which was purchased in 1928, has gone steadily forward, and is kept up to date as new sets of the cards are received. This unique and important index is regarded as the most valuable aid to botanical research on the continent, and since its installation in the Library has been frequently consulted, not only by botanists in Ottawa, but, by correspondence, throughout Canada.

Additional space for expansion has been provided in the gallery of the Library, formerly occupied by the Royal Society library.

The Library has been fortunate in acquiring from Mr. Johansen several hundred volumes, separates, and parts of publications needed to complete important series of European learned societies, the collections being especially rich in Scandinavian material. Among these may be mentioned Drygalski's *Greenland Expedition, 1897*; *Danmarks Fauna, vols. 1-33, 1907-1927*; *Zoologische Anzeiger, vols. 1-13, 1879-1890*; *Revue Zoologique par la Société Cuverienne, vols. 4-11, 1841-48*; *Ergebnisse der Hamburger Magalhaenischen Sammelreise, vols. 1-3, 1896-1907*, and many valuable *Handlingar* of the Royal Society of Stockholm. Other important purchases are: *Journal für Ornithologie, vols. 1-date*; Austria K. K. *Geologische Reichsanstalt Verhandlungen, 1892-1911*; *Société Neuchateloise des Science Naturalles, bulletins 4-16, 1858-1888* and Brehm's *Tierleben* in 10 volumes. The Explorers' Club of New York presented to the Library their unique facsimile publication of the *Scoresby Log-books, Concerning the Arctic Voyages of Captain William Scoresby*; The *Missouri Botanical Garden* brought up to date our set of their *Annals*; and the *Heidelberg Academie der Wissenschaften* presented a complete set of their *Sitzungsberichte* and *Abhandlungen*.

BRITISH COLUMBIA OFFICE

W. E. Cockfield, Geologist in Charge, reports:

The activities of the British Columbia Office show little falling off. During the year 4,200 visitors registered at the office and 450 inquiries were answered by letter, also a large number by telephone; 1,874 reports and 2,699 maps were distributed; and a large number of specimens of rocks and minerals were examined and reported on. Seventeen public lectures on geological and mining subjects were given by the staff during the year. Examination of the drill cores for the proposed Canadian Pacific Railway, False Creek Yard, tunnel under the city was also undertaken.

The staff of the office was changed during the year; W. E. Cockfield, as Officer in Charge, replacing V. Dolmage, who resigned, and J. F. Walker replacing F. A. Kerr, who was transferred to Ottawa. The staff is now composed of W. E. Cockfield and J. F. Walker, geologists, and A. J. C. Nettell, assistant engineer.

NATIONAL MUSEUM OF CANADA

W. H. Collins, Acting Director

Satisfactory progress was made in the work of the National Museum of Canada during the year 1929, in the collecting of material for purposes of scientific study and exhibition, in systematic scientific research, in the public display material in the Museum halls, and in general educational activities.

Anthropological investigations were carried on among the Tsimshian Indians of Nass River region, the Kwakiutl and Nootka tribes of Vancouver island, the Indians in the vicinity of Norman on Mackenzie river and of Peace River district, and the Ojibway of Georgian bay. Excavations were made of Indian village sites on the north shore of the St. Lawrence. A study of the mammalian life of southern British Columbia was continued, and observations on the fauna of the Arctic were made by a member of the Museum staff who accompanied the Canadian Government Expedition on the Canadian Government steamship *Beothic*. Botanical surveys were made in Wood Buffalo park, in the valley of Restigouche river, and in southwestern New Brunswick. In all cases material was collected for research and for exhibition purposes.

For geological, mineralogical, and palæontological exhibits the National Museum is dependent on the Geological Survey, with which there is most sympathetic co-operation. To the members of the Geological Survey staff who have made collections for the Museum and who have contributed generously of their time and energy in the preparation of exhibits, sincere appreciation is here expressed.

For co-operation in the preparation of exhibits the Museum is indebted to the Forestry Branch, Department of the Interior, and to the Entomological Branch, Department of Agriculture.

During the year the equipment was increased by the purchase of thirty steel table cases, and it is the wish of the Museum officials to continue adding to the supply of cases and other equipment and material even at the risk of being accused of overcrowding.

The Acting Director of the Museum here expresses his gratitude to the Canadian National Parks Branch and the North West Territories Branch, Department of the Interior, to the Department of Indian Affairs, the Royal Canadian Mounted Police, and other Government departments for valuable assistance and friendly co-operation. He also wishes to express to many individuals and organizations, both Canadian and foreign, his most cordial appreciation for donations and exchanges and for assistance rendered in connexion with scientific investigations.

ANTHROPOLOGICAL DIVISION

D. Jenness, Chief of the Anthropological Division, reports:

FIELD WORK

D. Jenness left for Java on March 31 to attend the Fourth Pacific Science Congress as one of the two delegates representing the Dominion of Canada and carried the official invitation of the Canadian Government that the Congress

should hold its next session in the year 1932 in Canada. He returned to Ottawa early in July, and left almost immediately to conduct some ethnological researches among the Ojibwa Indians of Georgian bay. During a two month's stay on the Indian reserve at Parry island he gathered much new and valuable information concerning their social life and religious beliefs before they were greatly influenced by contact with European civilization.

C. M. Barbeau completed during the summer field season his survey, commenced over ten years ago, of the Tsimshian tribes of northern British Columbia. This year he devoted his attention particularly to the social organization, language, and æsthetic arts of the Nass River group. He also collected some specimens for the National Museum, and some totem poles for the Royal Ontario Museum of Archæology.

Harlan I. Smith went to Vancouver island in May to collect ethnological and archæological material, and to take moving pictures of the various Indian tribes. His field work added 363 specimens to the Museum's collections, and 6,000 feet of motion picture film, in addition to a large number of still pictures. On Hornby island he discovered and photographed many petroglyphs that had not been previously recorded.

W. J. Wintemberg made an archæological investigation of the west coast of Newfoundland, from June to early September, and discovered there, rather unexpectedly, the remains of many Eskimo settlements predating the discovery of the island by Europeans. The specimens he collected from these sites indicate that the inhabitants were an offshoot of an early group of tribes whose real centre may have been in Hudson bay, but whose civilization possessed many peculiar features not as yet fully determined.

J. C. Boileau Grant, Professor of Anatomy in the University of Manitoba, continued his anthropometric survey of the northern tribes of Canada, working this year along the valley of Peace river among the Cree and Beaver Indians. It is expected that he will supplement this year's survey with a similar study during the coming year, of the related Indians of Great Slave lake, and work up the combined results of the two field trips into a comprehensive report that will cover all the Indian tribes of this area.

C. B. Osgood, who went down Mackenzie river to Norman in the summer of 1928 to make an ethnological study of the Hare Indians, passed a very successful winter with that tribe on Great Bear lake, and obtained a large number of notes on their mode of life, their customs and religious beliefs, which he is now working up into a consecutive report. He had an opportunity during the spring to study the Mountain Indians who live to the west of Norman, and will incorporate in his report an account of this tribe also. He procured for the Museum fifty phonograph records of Hare Indian songs, and fifty-six specimens of their clothing, tools, and household furniture.

OFFICE WORK

Since his return from the field Mr. Jenness has been working up his field notes on the Ojibwa Indians for publication as a museum bulletin, and continuing his text-book on the Indians of Canada, which is now nearing completion. Mr. Barbeau has in hand a selection of Indian songs from Nass and Skeena rivers, and Mr. Wintemberg has just completed a detailed report on the Roebuck village site, in Ontario, which he excavated some years ago. Mr. Smith was occupied during the winter in arranging the moving picture films which he has secured during the past few years; he has now completed six reels illustrating different Indian tribes in British Columbia.

The division published two scientific reports during the past fiscal year: "Some Shell-heaps in Nova Scotia," by Harlan I. Smith and W. J. Wintenberg; and "Anthropometry of the Cree and Ojibwa Indians of Northeastern Manitoba," by Dr. J. C. B. Grant. Three other reports are either in press or in the hands of the editors, viz.: "Totem-poles of the Gitksan," by C. M. Barbeau; "Anthropometry of Cree and Chipewyan Indians of Lake Athabaska," by J. C. Boileau Grant; and "Sacred Stories of the Sweet Grass Cree," by L. Bloomfield.

There was an unusual number of requests during the year for the loan of exhibition material. Early in the spring a small exhibit of fire-lighting apparatus was installed at the Y.M.C.A., Ottawa, for a boys' hobby show, and another of Canadian handicraft material in the Chateau Laurier for the Art Association of Ottawa. In September a high school at Windsor, Ontario, asked for and received the loan of a small selection of Indian specimens. In October, at the request of the Department of Trade and Commerce, Ottawa, a valuable collection of specimens was forwarded to the Imperial Institute, London, England, where they will be on display for several months; and from October to January the Canadian National railways received from the division, on loan, five collections of specimens illustrating Indian games, music, weapons, embroidery, and art, for exhibition in their ticket offices throughout Canada, and in certain cities of the United States.

Three archæologists from the United States visited the Museum during the summer. Mr. N. C. Nelson, of the American Museum of Natural History, New York, made a rapid survey of its archæological collections; Dr. Warren K. Moorehead, of Andover, Mass., spent several days studying its collection of stone axes and adzes; and Mr. H. B. Collins, of the Smithsonian Institute, Washington, came to examine large collections from Alaska.

MUSEUM WORK

The large exhibition cases installed last year in the east exhibition hall were equipped this year with diaphragms, and the entire north row filled with attractive specimens from the plains and plateau tribes of Canada. The division is assembling a series of synoptic exhibits of Indian basketry, musical instruments, etc., for installation in the large cases on the south side of the same hall, preceded by a special introductory exhibit of some of the palæolithic material from Europe collected by Dr. H. M. Ami. During the winter Dr. Ami placed in the division's care an excellent replica of two clay bisons recently discovered in a palæolithic cave in France; these are being installed in a special case near the entrance of the hall, pending their arrangement as the central feature of a habitat group depicting the artistic achievements of early man about the close of the Ice age.

A large number of table cases were acquired during the year and placed around the walls of the east exhibition hall. The division plans to arrange a series of archæological exhibits in these table cases as soon as their interiors are equipped with heavy beaverboard foundations.

Accessions to Museum

The anthropological collections of the Museum were augmented during the year, mainly through its staff, as follows:

	Specimens
Ethnological	517
Archæological	1,200
Osteological	3

BIOLOGICAL DIVISION

R. M. Anderson, Chief of the Division, reports:

FIELD WORK

R. M. Anderson attended the Eleventh Annual Meeting of the American Society of Mammalogists held April 10 to 13, 1929, in the Museum of Zoology, University of Michigan, Ann Arbor, Michigan.

Mr. Anderson also planned and carried out an extensive campaign of field work in southern British Columbia during the season of 1929, in continuation of a biological reconnaissance of the region in the vicinity of the International Boundary line between the province of British Columbia and the states of Washington, Idaho, and Montana. The data and specimens collected are expected to be used as a basis for a later faunal report on the mammals of the International Boundary region of southern British Columbia from the strait of Georgia to the Alberta boundary.

This project was begun in the spring of 1927—and carried on by C. H. Young, senior collector-preparator on the Museum staff, assisted by H. M. Laing, of Comox, B.C. They made extensive collections in the low, humid Pacific coast belt and continued over the Hope-Princeton summit to the eastern slope of Cascade mountains. In 1928 Mr. Laing continued the work, beginning at Sterling creek (elevation 1,700 feet) on the east slope of Cascade mountains near Hedley, B.C., carrying the survey as far east as Westbridge in Kettle River valley (elevation 2,075 feet), going back later in the autumn for investigations on Juniper mountain, south fork of Ashnola creek (elevation 4,500 feet).

In 1929, Mr. Laing was again engaged and began work on May 4 in the arid belt of southern Okanagan valley covering the area from Osoyoos lake to Rossland.

R. M. Anderson left Ottawa on June 27 and reached Rossland on July 2, remaining with the party until the close of the season.

On August 6, the party left Rossland and proceeded to Creston. Camp was situated on flat lands west of Kootenay river, where the party remained until August 23. Extensive forest fires prevented exploration of Boundary creek and Summit lake and ultimately compelled retreat from Creston district.

On August 23, the party established camp on a little stream about one mile from Moyie river. Small mammal life was not abundant as a large part of the valley was burned-over land and the hillsides were too dry. A small collection was made here.

Through the courtesy of Mr. H. B. Murray, of the Canadian Pacific railway, camp was established, August 31, on Meadow creek (elevation 3,500 feet) about 3 miles from the British Columbia-Idaho-Montana corner. Work was carried on from this camp until October 3. Considerable collecting was done on American creek, Flatiron mountain, and on Cold creek. Mr. Hall, student assistant, spent over a week near the head of Cold creek at about 4,500 feet elevation. Short trips were made to tops of neighbouring mountains up to about 6,000 feet.

After completing the field work at Yahk, Mr. Anderson continued to Vancouver and interviewed the Game Commissioner of the province, Mr. A. Bryan Williams, from whom he obtained information on some of the big game species. Mr. Anderson also examined the Kenneth Race collection of mammals and birds of British Columbia. At Victoria he spent some time at the Provincial Museum and made notes on the British Columbia mammals in the collection. On the return trip he stopped off at Okanagan Landing, B.C., and examined the large collections of Major Allan Brooks and of J. A. Munro, also

checked up mammal notes with Major Brooks, and made preliminary arrangements for a series of coloured drawings, of big game and fur-bearing mammals of Canada, for a work on the Mammals of Canada which Mr. Anderson is preparing for the department. Twenty-four plates of mammals were completed by Major Brooks later in the year. After returning to Ottawa, Mr. Anderson attended the 47th Annual Meeting of the American Ornithologists' Union, held at Philadelphia, October 21 to 25. While there he spent some time carefully examining and making notes on a rather large number of British Columbia mammals in the collections of the Academy of Natural Sciences, which include several types of mammals collected and described from southern British Columbia by the late Samuel N. Rhoads of Philadelphia, and interesting Canadian material from other collectors.

P. A. Taverner, ornithologist, accompanied the Canadian Arctic Expedition of 1929 as naturalist on S.S. *Beothic* to Greenland, the eastern islands of the Canadian Arctic archipelago, Hudson strait, and into Hudson bay to Chesterfield inlet. The *Beothic* left North Sydney, N.S., July 20, with Mr. George P. Mackenzie, Officer in Charge, making its first call at Godhavn, Greenland, on July 27. The ship then proceeded to Dundas Harbour, Devon island, and from thence to cape Sparbo, on the north coast of Devon island, where a well-known herd of musk-oxen is still found, and where many excellent still and motion pictures of musk-oxen were secured. From Sparbo the ship proceeded to Craig harbour, Ellesmere island, and thence to Buchanan bay, where supplies for the Bache Peninsula post were landed at cape Rutherford. Turning south stops were made at Etah and Nerke Settlement, North Greenland; Dundas Harbour, Devon island; Ponds inlet, Clyde river, Pangnirtung, and Lake Harbour, all on Baffin island. The boat then proceeded into Hudson bay to Chesterfield inlet to land provisions and coal for the Royal Canadian Mounted Police detachment, and building material for the medical officer to be stationed there. On the return the *Beothic* stopped at Carys Swan Nest on Coats island; Lake Harbour, Baffin island; Acadia cove, Resolution island, where a direction-finding station is being established by the Department of Marine; touched at Port Burwell on the south entrance to Hudson strait, and cruising down the Labrador coast, reached North Sydney again on September 3, after travelling 7,800 miles.

Joseph Rochon, osteological preparator, left Ottawa on July 16 and proceeded to Trout lake and lake Pourri, Labelle county, Quebec, returning August 25 with 107 specimens of small mammals. During the rest of the year his time was mostly spent in macerating, cleaning, and preparing skulls and skeletons of mammals and birds.

Clyde L. Patch, chief taxidermist and herpetologist, D. Blakely, taxidermist, and Claude E. Johnson, artist, did some field work in Ottawa district, principally collecting local material to fill out the collections and obtaining accessories for habitat group work.

PUBLICATIONS

R. M. Anderson continued work as general editor of scientific reports of Canadian Arctic Expedition, 1913-18. No new parts were issued during the year, but preparations are being made to close up some of the unfinished volumes, and some progress has been made in preparing some of the completed volumes of the series.

At the request of Professor Julian Huxley, Departmental Editor of Section Biology and Zoology, Mr. Anderson wrote the article on "Fur-bearing Animals (Land)" which was published in 13th Edition of the Encyclopaedia Britannica, issued in 1929. He has also completed one section of the manuscript for a museum bulletin on "Methods of Collecting and Preserving Animals for Study." The line drawings for illustration have been prepared by Claude E. Johnson, artist

of the Division of Biology. Some progress has been made on the "Check-List of Canadian Mammals" and a large amount of data has been accumulated adding to its completeness. A good start has also been made in the preparation of an illustrated book on "Mammals of Canada," planned to include analytical keys for determination of species, adequate descriptions of every form of mammal known to occur in Canada, distribution maps, bibliographical data, and general accounts of life histories and habits of the most important species. Several book reviews and mammal notes were published in *The Canadian Field-Naturalist*, Ottawa, of which Mr. Anderson is Associate Editor in Mammalogy.

The introduction was by Mr. Laing, pages 64-71. "Notes on Birds Collected and Observed in Chitina River Region, Alaska" gives field notes on eighty-five species by Mr. Laing, with systematic notes by Mr. Taverner, pages 72-95. "Notes on Mammals of Upper Chitina River Region, Alaska," gives field notes on seventeen species by Mr. Laing and systematic notes by Mr. Anderson, pages 96-107.

Mr. Taverner also prepared an article on "Some Zoological Aspects of the Canadian Arctic Expedition of 1928," which was published in *The Canadian Field-Naturalist*, vol. XLIV, 2, February, 1930, pages 25-27. Mr. Taverner also completed the manuscript and drawings for a bulletin on "Water Birds, Game Birds, and Hawks of Canada."

During the year an edition of 3,000 copies of sixty picture postcards of birds was issued about December 18. The coloured illustrations were made from plates of "Birds of Western Canada," some from "Birds of Eastern Canada," and some from new paintings by Major Allan Brooks. Each card contains one coloured illustration, accompanied by descriptive text, and the cards are supplied in sets, in carton, for sale at \$1, and also loose, for sale at two for 5 cents.

A valuable paper on "Freshwater Mollusca from Central Ontario," by Frank Collins Baker and Alvin Robert Cahn, based on recent collections made in Ontario and on other material in different collections, has been received for publication. The authors have generously offered to give the National Museum of Canada duplicate specimens of the species collected on the expedition, as well as cotypes of new forms which are described. This report is a contribution of interest both in the field of recent zoology and of invertebrate palæontology.

MUSEUM WORK

The Forestry Branch, Department of the Interior, has made a beginning of exhibition of certain forest products, and has filled one large case with two exhibits: (1) The manufacture of wood pulp, illustrating the groundwork, sulphate, sulphite, and soda processes; (2) some products of wood pulp, including rayon thread and weaves, wallpaper, twine, rope, fibreware, wall-boards, and artificial wood. Part of the material for four large tree exhibits has been shipped in, but not yet installed.

The Curator of Insects in the Museum, Mr. Arthur Gibson, Dominion Entomologist, has aided in the installation of a case of silk products, the bulk of the material being supplied by the General Silk Corporation.

As a result of field work by members of the staff, considerable additions have been made to the study collections, and much material obtained suitable for subsequent mounting. The scientific officers of the staff have devoted such time as other duties permitted, to determining, classifying, and making systematic notes on specimens examined.

The work of identifying and systematically arranging the collections in zoology and botany which are coming in, and making the data obtained from field notes, correspondence with specialists and local naturalists, and study of specimens available for reference is an important feature, and the results are embodied from time to time in Museum reports and bulletins and in

technical scientific periodicals. The officers of the Division of Biology are prepared to identify and return Canadian specimens of mammals, birds, reptiles, or amphibians, which are sent in a fair state of preservation and with sufficient data in regard to locality, date of collecting, and sex if possible. Where possible the Museum would be pleased to have duplicate specimens sent for deposit in the National collection. The Chief Botanist will only attempt to determine plants when properly pressed, showing roots, stem, leaves, and if possible flowers or fruit, and it is requested that one or two duplicates of each form be sent for dissection and for permanent preservation in the National Herbarium.

The National Parks of Canada, Department of the Interior, through the Commissioner, Mr. J. B. Harkin, has kindly continued to send in many specimens of large game or predatory fur-bearing mammals from the various national parks, the North West Territories and Yukon Branch, Department of the Interior, through Mr. O. S. Finnie, director, and the members of various detachments of the Royal Canadian Mounted Police, through the Commissioner, Colonel Cortlandt Starnes, have continued to send in valuable materials from the Far North, which are very acceptable to the Museum. As the area of the Dominion of Canada is so large, and the Museum staff limited, the only hope of obtaining needed material from many districts is by donations and interested friends and public-spirited sportsmen and travellers.

The Hudson's Bay Company, the largest establishment engaged in the fur business in the British Empire, has for some time been interested in having studies made of the periodical fluctuations in the numbers of wild animals in the districts where the company operates trading posts. There is in many cases confusion in regard to data based on inadequate and inaccurate determinations of species of the smaller mammals which are not so well-known and which occupy different ecological niches. To check up this data it was considered necessary to have collections of small mammals made at different points and properly identified. Mr. C. V. Sale, Governor of the Hudson's Bay Company, authorized Chief Factor Charles H. French, Fur Trade Commissioner of the Company at Winnipeg, to co-operate with R. M. Anderson in the matter in the spring of 1929. Forty small sets of collecting equipment, including tools, small traps, preservatives, labels, and mimeographed instructions for preserving mammals for scientific purposes for the National Museum of Canada, were accordingly prepared at Ottawa and shipped by direction of the Fur Trade Commissioner's office to the District Managers' offices at Montreal, Winnipeg, Saskatoon, North Bay, Edmonton, and Vancouver, and from thence distributed to forty different posts of the Hudson's Bay Company.

These forty posts were selected as being in suitable positions to give a cross-section through a great part of northern Canada and with the co-operation of the intelligent managers in charge of many of the posts and their facilities for obtaining material from Eskimos, Indians, and white trappers, it is hoped that much scientific data will be obtained to the advantage of both the Hudson's Bay Company and the National Museum. As the posts are in most cases remote and difficult of access, results are hardly expected until one winter after the shipment of equipment and instructions. However, small lots of mice were received in the autumn of 1929 from Ile-a-la-Crosse, Saskatchewan, and two species of lemmings from Lake Harbour, Baffin island, and more are expected during the summer of 1930.

Accessions to Museum

Accessions to the zoological collections:

Mammals received and catalogued	846
Birds received and catalogued	293
Amphibians and reptiles received and catalogued.....	96

NATIONAL HERBARIUM

M. O. Malte, Chief Botanist, National Herbarium, with Mr. W. R. Watson, as student assistant, made a botanical survey of St. Andrews and vicinity, New Brunswick. More than 600 species and varieties of flowering plants and ferns were collected.

H. M. Raup, assisted by Mrs. Raup, continued investigations on the flora of Wood Buffalo park, Alberta.

J. Rousseau made a botanical exploration of the districts of St. Urbain and Matapedia, Quebec, collecting about 500 flowering plants and ferns, aggregating approximately 3,000 herbarium sheets.

M. O. Malte continued work on Arctic botany in co-operation with Professor C. H. Ostenfeld, Copenhagen, Denmark, who spent about one month at the National Museum determining collections and preparing manuscript for a "Flora of Arctic Canada".

Through the co-operation of the Forestry Branch, Department of the Interior, samples of five trunks of different trees were secured for exhibit in the Museum.

Plants distributed:

Prof. C. H. Ostenfeld, Copenhagen, Denmark. 47

Plants received outside of collections made by staff:

Gray Herbarium, Cambridge, Mass. 28

Prof. M. L. Fernald, Cambridge, Mass. 12

MINES BRANCH

John McLeish, Director

The annual value of the mineral production in Canada continues to increase rapidly, having grown from \$86,000,000 in 1907 to \$189,000,000 in 1917, and \$247,000,000 in 1927. In 1929 the production had risen to \$307,000,000, or the production per capita in 1907 was \$13.75; in 1917 it was \$23.18; in 1927, \$25.97, and in 1929 it reached a maximum of \$31.35. The rapidly accelerating growth of this industry has been due not alone to the finding of new mineral deposits, but must be ascribed in considerable measure to the improvements that are constantly being made in the metallurgical treatment of ores, and to new uses developed for numerous products of the mine.

To this development the Mines Branch, Department of Mines, can properly claim to have made a substantial contribution through the collection and dissemination of information respecting Canadian mineral resources, and especially through the test and research work being carried on in its ore dressing and metallurgical laboratories, its fuel research laboratories, and its laboratories for ceramic and road material investigations.

The organization of the branch has been increased from year to year in an effort to meet the constantly increasing demand for its work, although the problems the branch is called upon to investigate appear to be increasing at a much greater rate than the available staff to undertake them.

The total number of employees at the end of March, 1930, was 188, of whom 46 were temporary; and included 62 administrative officers, engineers, and chemists; 13 technical clerks and draughtsmen; 24 clerks and stenographers; 19 laboratory assistants in several grades, and 70 mechanics, labourers, and messengers.

The Director devoted the major part of his time to departmental administrative duties, in addition to which he attended the regular meetings of the Dominion Fuel Board, and acted as chairman of several sub-committees of this board. He attended, as a member, several meetings of the Advisory Committee on Mining Regulations, and meetings of several Associate Committees of the National Research Council, as well as numerous meetings of the Government Advisory Committee on the Civil Service Superannuation Act.

In May he attended the second annual meeting of the Nova Scotia Provincial Advisory Board on Fuel Investigations.

Early in October he attended a conference of Dominion and Provincial officials with representatives of the coal mining industry of British Columbia, at which it was arranged that the Mines Branch should undertake a series of large-scale experiments on the burning of British Columbia coals in the powdered form. At Edmonton, in the province of Alberta, arrangements were made for the formation of a joint committee representing the Mines Branch and the Alberta Research Council to advise on the distribution for action of Alberta coal investigation problems. Visits were also paid to coal fields on Vancouver island and in the Crowsnest Pass districts of British Columbia and Alberta.

He attended the annual western meeting of the Canadian Institute of Mining and Metallurgy in Edmonton in October of 1929, and the annual meeting of the Institute in Toronto in March of 1930.

The outstanding activities of the Branch during the year are briefly outlined under its several divisions as follows:

MINERAL RESOURCES DIVISION

In submitting his review of the year's work, A. W. G. Wilson, Chief of the Division, stresses the fact that a very important feature of the work of the technical officers of this division is the dissemination of information through correspondence and personal conference.

Each technical officer is a specialist on certain selected minerals, their commercial products, and industrial applications. He devotes a large part of his office time to dealing with requests for information, and to acting in a consulting capacity to engineers, capitalists, prospectors, and others who call at the offices of the Mines Branch in Ottawa for advice and assistance. It is believed that this service is contributing greatly toward the development of new industries in Canada and to the improving of operating conditions, though it very seriously interferes with the completion of reports and with the early publication of the results of the more systematic investigations which appear from time to time as monographs or bulletins.

Mr. Wilson was nominated, in May of this year, as one of the representatives of the Dominion Government on a committee, under the chairmanship of Mr. Charles Camsell, appointed to investigate conditions of natural gas production and wastage in Turner valley, Alberta. Meetings were held in western Canada in May, in June, and in September, and a final meeting in Ottawa in January. Work on this committee, including the organization of its investigations and the preparation of its final reports, occupied a large part of Mr. Wilson's time during the year. The committee's investigations included an exhaustive report on the "Economic Possibilities of the Production of Chemical Products from Waste Natural Gas in the Turner Valley, Alberta", which was prepared by Industrial Processes Development, Limited, and a report on "Clay and Shale Resources of Turner Valley and Nearby Districts", by Dr. W. G. Worcester, of the University of Saskatchewan, through the Ceramics Division of the Mines Branch.

H. S. Spence completed the field work in connexion with his study of the mica industry during the early part of the year, when he visited mica mines and mills, and mica trimming establishments in the United States. His report on mica was issued early in March, 1930. The field season was devoted largely to completing the examination of feldspar deposits and mines in Ontario and Quebec. Feldspar mines and mills in the United States were also visited to gather data for a report on this mineral and on the producing and consuming industries. Examinations were made in Ontario and Quebec; Maine, New Hampshire, and New York states. The field work is completed, with the exception of some minor details, and the revised monograph is well under way. Concurrently with his work on feldspar, Mr. Spence studied the occurrences of rare-earth and radioactive minerals in Canada, to ascertain whether these minerals occur in commercial quantities. The most important occurrence studied is that of a radium-bearing uraninite near Wilberforce, Ontario. This deposit forms the subject of a special article which will be published in "Investigations of Mineral Resources, 1929."

L. H. Cole completed the manuscripts of his revised reports on gypsum and on salt, and both volumes are in process of publication. Through the courtesy of the New Brunswick Gas and Oilfields, Limited, Mr. Cole had the opportunity of sampling in detail a core obtained from a salt deposit at Gautreau, N.B. This core penetrated 980 feet of rock salt; it was divided into suitable sections for sampling, and the samples were examined in the chemical laboratories for bromine, iodine, and potash. Mr. Cole devoted most of the field season to a study of deposits of anhydrite in Canada. The field work, which is now com-

pleted, included visits to localities in Ontario, Nova Scotia, and New Brunswick. At the close of the season a trip was made to United States points to ascertain what progress had been made in the utilization of this mineral. On the conclusion of the field work a number of laboratory studies were planned, and this work is still in progress.

S. C. Ells devoted most of the field season to the development of a new quarry site for the production of bituminous sands. This site is located on the Clearwater reserve, nearly opposite the present end of steel of the Alberta Great Waterways railway. About 6,000 tons of sands were exposed by removing the overburden, docks were built, and loading towers and cable were installed. The Research Council of Alberta has erected a separation plant, designed to use Dr. K. A. Clark's process of separating bitumens from sand, beside the quarry site, and it is proposed to operate this plant during the summer of 1930. Late in the year Mr. Ells visited asphalt mixing plants at several points in Texas, preparatory to undertaking the construction of a mixing machine at Edmonton during the winter. This new machine is now nearly complete and it is planned to carry on some experimental work with the machine during the season of 1930.

M. F. Goudge continued his work on the systematic survey of the limestone resources of Canada. The general areal survey of important occurrences in Canada has been completed, except for some minor detailed examinations that may be required. Studies of the technology of limestone quarrying, lime burning, and of the industrial uses of limes and limestones are now in progress. Preliminary reports dealing with the limestone resources of each province, except British Columbia, have been published during the progress of the investigation; a report on the lime and limestone industries in British Columbia is in course of preparation.

A. H. A. Robinson was engaged primarily upon the compilation of a report on lode mining for gold ores in Canada. He also has reported on current progress in the mining of ores of base metals in central and eastern Canada. A good deal of Mr. Robinson's time has been devoted to the preparation of reviews of the Canadian Mineral Industry for the technical press.

V. L. Eardley-Wilmot was engaged in the compilation of a report on current progress in the mining of silver-bearing ores in Canada. About four months were spent in visits to mines throughout British Columbia. A considerable part of Mr. Eardley-Wilmot's time in the office has been devoted to work in connexion with investigations of abrasives and the abrasive industry, including the preparation of an annual review for Mineral Industry.

Arthur Buisson, mineral technologist in charge of the Records Section of this division, spent about two months visiting the principal mining centres in northern Ontario, western Quebec, northern Manitoba, and southern British Columbia. This season's work was in continuation of a practice initiated some years ago to procure for the records first-hand information about current developments and local conditions in the various mining districts of the country. Mr. Buisson has prepared for distribution to the press a number of short articles based on this field work.

C. H. Freeman continued his general work of checking the production of sands and gravels for various purposes. Most of his time for field work was spent on the investigation of moulding sand occurrences in Quebec, south of St. Lawrence river, and in Ontario, west of Toronto. About one hundred and twenty-six large-scale samples of sands suitable for use as moulding sands were collected. These samples are now being studied in the laboratories.

E. H. Wait was employed in studying current conditions in the mining industry in the provinces of New Brunswick and Nova Scotia.

John Casey, statistician attached to this division, conducted the third survey of fuels for domestic heating, covering the Maritime Provinces, Quebec.

Ontario, and Manitoba. Information was collected respecting the source of supplies and the quantities consumed of the following sources of heat: coals and cokes, charcoals, briquettes, gases, both natural and artificial, fuel oil, electric energy, and such other fuels as are used for domestic purposes. The survey covered the operations of over 5,600 distributors of domestic-purpose fuels in four hundred and fifty municipalities. Although the survey, as a whole, was conducted by circular letters and correspondence, it was also necessary to follow up written inquiries by personal visits to many distributors.

ORE DRESSING AND METALLURGICAL DIVISION

W. B. Timm, Chief of the Division, reports a 50 per cent increase in the amount of investigative work on ore treatment as compared with the previous year. This large increase in the demand for assistance was due to greater activity in the mining industry and to the confidence of the industry in the usefulness of the work being performed.

Under the direction of W. B. Timm, H. C. Mabey and V. A. Minnes co-operated with the architects of the Department of Public Works on the preparation of plans and specifications for a new building which will contain chemical and physical testing laboratories and provide the very urgently required office space for the staff of the division.

The new pyrometallurgical laboratory building to house the electric smelting furnaces and other equipment required for the operation of the newly organized Iron and Steel Section has been completed and part of the apparatus installed. The preliminary research work on the utilization of low-grade iron ores can now proceed.

CO-OPERATIVE ARRANGEMENTS

The co-operative arrangement entered into with the Base Metal Extraction Company, Limited, a British organization, was continued and further work was done on the treatment of low-grade base metal copper, lead, and zinc ores. The company hope to establish a smelter in eastern Canada for the treatment of such ores. During the year they obtained the Canadian rights on the Waelz process, a method of recovering zinc and lead from smelter residues and from low-grade ores and refractory concentrates. A small test plant was erected in our laboratories and work of a highly important nature was done on the refractory concentrates from the Treadwell-Yukon mine near Sudbury. The results of this work were particularly satisfactory in as much as an economical method for the treatment of the ore was indicated and plans are now being made in anticipation of favourable development at the mine for the erection of a smelter using this process.

The co-operative arrangement with the Cassel Cyanide Company, a branch of the Canadian Industries, Limited, is still existent. The company maintain a research fellow in our laboratories. Advantage is taken of the laboratory equipment to determine the suitability of their various products for the treatment and recovery of metals from Canadian complex ores.

During the year two new co-operative arrangements were made. One with the American Cyanamid Company, Niagara Falls, Ont., under which they placed a flotation research engineer in our laboratories to work, under Mines Branch supervision, on the use of cyanide and special flotation re-agents developed by that company for the selective flotation of Canadian complex ores.

The other new co-operative arrangement was with the Ross-Playfair interests of Montreal, who own the Canadian rights on the Musso sponge iron process for the semi-direct production of steel from iron ores. This Montreal financial group, wishing to try out this process—which may be specially adaptable to Canadian ores—have been granted permission to install in our new

pyrometallurgical laboratory building, at their own expense, a semi-commercial scale unit required to demonstrate the process. The Mines Branch will make available all the facilities of its laboratories and of its metallurgical staff. This investigation of the Musso process will constitute a part of the general Mines Branch investigatory problem of the utilization of Canadian iron ores and the replacement of imported steel scrap for the manufacture of alloy and high-grade steels in Canada. The plant is at present under construction and when in operation, which it is hoped will be by the middle of the summer, will be capable of producing from 4 to 6 tons of sponge iron a day, which will be converted into steels of all grades. These steels will be thoroughly tested by the Mines Branch for quality. The plant at the completion of the demonstration will become the property of the Mines Branch and if the process is successful the investigation will be continued to include iron ores from all parts of Canada.

At the request of Dr. J. Neil Greenwood, Professor of Metallurgy in the University of Melbourne, Melbourne, Australia, Mr. C. B. O'Malley, then recently appointed as lecturer on ore dressing in the university, was granted permission to spend five months, from May to September, in our Ore Dressing Laboratories, where he was enabled to become acquainted with Canadian and American milling practice. Mr. O'Malley at the same time was given an opportunity of studying, and making personal contact with, our Canadian mining industry.

These co-operative arrangements are an evidence of the practical value of the service being rendered the mining industry by the laboratories.

FIELD STUDIES

The policy of allowing the officers to keep in contact with those engaged in the mining industry was continued.

W. B. Timm spent two months in the field securing information on the progress in ore dressing and metallurgical practice and in renewing personal contact. He visited the mining centres of British Columbia and in particular the new developments at Field, where the Base Metal Mining Corporation is operating. He also inspected the new developments of the Sherritt-Gordon and Hudson Bay Mining and Smelting Companies in northern Manitoba.

C. S. Parsons, accompanied by C. B. O'Malley, visited the Coxheath and Stirling mines in Cape Breton, Nova Scotia, and a few of the gold properties. They also made a trip through the mining fields of northern Ontario and Quebec. Mr. Parsons spent one month in Malartic township, Quebec, working on milling problems.

T. W. Hardy visited the iron and steel plants in Ontario and Nova Scotia, securing information regarding certain of their problems in metallurgical practice. He also visited certain steel centres in the United States and discussed with the leading experts in the industry the latest developments in direct reduction of iron ores as applied to the problem of the utilization of the Canadian low-grade iron ores. Mr. Hardy also devoted a large part of his time to assisting the Advisory Tariff Board on matters pertaining to iron and steel products.

R. J. Traill accompanied by W. B. Timm visited the new Tainton electrolytic zinc plant at Kellogg, Idaho, to study the operation of this new process with the object in view of determining its adaptability to Canadian ores and conditions. They also visited the Trail smelter in British Columbia to investigate the new developments of the Consolidated Mining and Smelting Company, particularly in connexion with the recovery of the by-products, such as cadmium and bismuth, from the electrolytic zinc plant. The new process for the recovery of zinc from the lead slags was also studied, and the plans for the production of fertilizer as a means of eliminating the smelter fume problem.

R. A. Rogers, working with L. H. Cole of the Mineral Resources Division, in connexion with a study of the Canadian gypsum and anhydrite industry, visited gypsum plants in West Virginia, Virginia, and Connecticut, U.S.A.

W. B. Timm was appointed to represent the Department of Mines at the Third (Triennial) Empire Mining and Metallurgical Congress being held in South Africa during the months of April and May. He left for England in February to join the Congress.

LABORATORY INVESTIGATIONS

In the Ore Dressing Section for metallic ores, C. S. Parsons in charge, assisted by A. K. Anderson and J. S. Godard, conducted the following investigations:

Gold ore.....	(a) Jackson Manion mine, Woman Lake, Ont.
	(b) British Canadian mine, Mine Centre, Ont.
	(c) McMillan Gold mine, Mongowin tp., Ont.
	(d) Perrier Syndicate, Nelson, B.C.
	(e) Gem Lake mines, Gem lake, east-central Man.
	(f) Sylvanite Mines, Ltd., Kirkland Lake, Ont.
	(g) Evangeline gold mine, Liscomb mill, N.S.
	(h) Belledate-Goudreau mine, Goudreau, Ont.
	(i) St. Anthony mine, Savant Lake, Ont.
	(j) Malartic mine, Fournier tp., Ont.
	(k) Goudreau-Lochalsh district, Ont.
	(l) Granada-Rouyn mine, Rouyn district, Que.
Copper-gold ore.....	(m) Beardmore mine, Jellicoe, Ont.
	(n) Green Stabell mine, Dubuison, Abitibi, Quebec.
Copper-nickel	(b) Central Manitoba mine, Wadhope, Man.
	(a) Engineers Holding Co., Michipicoten, Ont.
Copper ore.....	(a) Falconbridge mine, Sudbury, Ont.
	(a) Patterson copper mines, Boston Creek, Ont.
	(b) Windsor mine, La Sarre, Que.
	(c) Coxheath mine, N.S.
	(d) McGinn claims, Baldwin, Sudbury, Ont.
	(c) Aldermac mine, Rouyn, Que.
Copper-zinc	(a) Sherritt-Gordon mine, Man.
Copper-lead-barytes	(a) Giant mine, Spillamacheen, B.C.
Copper-lead-zinc ore.....	(a) Errington mine, Bradley, Ont.
Lead-zinc ore.....	(a) Towagamac Exploration Co., Geneva, Ont.
	(b) Haslat Duck Lake mine, Schreiber, Ont.
Lead-silver ore.....	(a) Mallard Lake mine, Kirkland Lake, Ont.
Iron ore.....	(a) Kaministiquia, Ont.
	(b) Bristol mine, Que.
	(c) Mine Centre, Ont.
Silver ore.....	(a) Castle-Trethewey mine, Bestel, Ont.
Tin	(a) Snowflake mine, Albert Canyon, B.C.

In the Ore Dressing Section for non-metallics, R. K. Carnochan in charge, assisted by R. A. Rogers, conducted the following investigations on non-metallic minerals:

- Non-metallics—(a) Asbestos, Ville Marie, Que.
 (b) Silica sands, Guigues tp., Que.
 (c) Mica, Gatineau district, Que.
 (d) Radium, Cardiff tp., Haliburton, Ont.
 (e) Gypsum from various Canadian occurrences.

In the Hydrometallurgical and Electrochemical Section, R. J. Traill in charge, assisted by W. R. McClelland and J. D. Johnston, conducted the following investigations:

- (a) Canadian titaniferous magnetites as a source of iron and vanadium.
 (b) Hydrometallurgical and electrochemical processes for the recovery of zinc from Canadian ores, concentrates, and residues.
 (c) Co-operative investigations with the Base Metal Extraction Company in the treatment of complex lead-zinc-copper ores by the Waelz process.

The Pyrometallurgical (iron and steel) Section, T. W. Hardy in charge, undertook some experimental work in connexion with sponge iron investigation. The installation of the Musso sponge iron and semi-direct steel process plant, already referred to under co-operative arrangements, was in progress under the direction of H. A. McLeod and C. E. Parsons, representing the Ross-Playfair interests.

H. C. Mabec, chief chemist in charge of the chemical laboratories of the division, reports that the number of samples for chemical analysis from the various investigations exceeded those of any previous year by over 50 per cent. B. P. Coyne, R. A. Rogers, and H. L. Beer performed the analytical, and L. Lutes the assay, work.

Mr. Mabec actively co-operated with the Base Metal Extraction Company in the investigation of the Waelz process for the recovery of zinc and lead from complex ores.

FUELS AND FUEL TESTING DIVISION

B. F. Haanel, Chief of Division, reports that the investigational and routine work is continuing to increase rapidly. The installation of small-scale experimental equipment is approaching completion; the pulverized fuel boiler installation is completed and tests on British Columbia coals are under way. With the exception of the semi-commercial by-product coke oven, the installation of large-scale equipment, including the pulverized fuel steam boiler just mentioned, the large gas engine, and the wet and dry coal cleaning equipment, is now complete. The installation of the small-scale pressure experimental hydrogenation laboratory has been completed and the preliminary tests have been begun on samples of Canadian coals. The chemical and physical survey of the Phalen seam in Nova Scotia—field work on which was begun in the summer of 1928—is still under way. Peat manufacturing operations at the Alfred peat plant were terminated in the autumn of 1928, but during the summer of 1929 some 1,500 tons of peat humus was harvested and piled at the railway siding, and several hundred tons of peat fuel and peat humus were sold; during the autumn of 1929 the plant was closed indefinitely.

The technical staff of the division was increased by the appointment of T. E. Warren and E. A. Smith as Research Engineers, the former for full time and the latter for the university vacation period only. R. J. Young was appointed Assistant Chemist.

INVESTIGATIONS AND EXAMINATIONS MADE BY THE CHIEF OF THE DIVISION AND TECHNICAL ENGINEERS

In addition to planning and directing the work of the division, Mr. Haanel attended the regular meetings of the Dominion Fuel Board, and the meeting of the Nova Scotia Advisory Board of Fuel Investigation. He held several conferences with officials of the British Empire Steel Corporation at Montreal, in connexion with the experimental work being carried on by that company in co-operation with the division, on low temperature carbonization. Mr. Haanel also attended the conference held with the British Columbia government relating to the investigation of British Columbia coals, and spent considerable time visiting collieries in Crowsnest pass and on Vancouver island. While in the west he attended the annual meeting of the Canadian Institute of Mining and Metallurgy held at Edmonton, Alberta. Mr. Haanel also attended the annual meeting of the American Society of Heating and Ventilating Engineers, held at Philadelphia; and visited the Todd Shipyards Corporation and the Foster Wheeler Corporation, for the purpose of conferring with those concerns on powdered fuel steam-raising installations for marine purposes. A portion of his time was spent, as previously, in connexion with concluding the work being carried on at Alfred, Ontario, in the manufacture of peat.

R. E. Gilmore, Superintendent of the Fuel Research Laboratories, was occupied chiefly with the details pertaining to moving into the new laboratory building and the installation of equipment therein. In addition to his regular supervisory duties, he assisted in planning the work of the division and in the preparation of the annual report "Investigations of Fuels and Fuel Testing." He made a special report on the outcrop sample of Blacksmith Rapids lignite submitted by the Ontario Department of Mines, and during the year visited collieries in Nova Scotia, Alberta, and British Columbia. He was occupied, also, with the work of both the Canadian and American coal classification committees, and prepared a paper on the status of coal classification in Canada.

E. S. Malloch and C. E. Baltzer, in addition to their routine duties, supervised the setting up and preliminary operation of the pulverized fuel-fired boiler, prior to making a start on the investigation into the amenability of Canadian coals to pulverization and firing in that state under a steam boiler. Ten tests in all were made in this investigation, three of a routine nature and one on each of seven different coals from British Columbia. Mr. Baltzer witnessed a series of burning tests on four different fuels in the boiler plant of Westminster Hospital, London, Ontario, for the purpose of determining the most suitable fuel for use in that institution. This investigation was made at the request of the Department of Pensions and National Health.

R. A. Strong and E. J. Burrough of the Carbonization Section, inspected a series of tests on a 20-ton lot of Nova Scotia coal at the experimental plant of the Illingworth (low temperature) Carbonization Company at Pontypridd, South Wales. Mr. Strong made inspections of gas plants at Halifax and Quebec city in connexion with their applications to come under the provisions of the Domestic Fuel Act, and, assisted by Mr. Burrough, continued the small laboratory scale high and low temperature carbonization survey of Canadian coals. Mr. Strong, also, was a member of the delegation investigating the problems relating to the mining and utilization of coal in the western provinces.

A. A. Swinnerton and G. P. Connell continued laboratory work pertaining to oil-shales and bituminous sands. Mr. Swinnerton conducted further oil-shale field work in Pictou area, Nova Scotia, and visited oil-shale retorting operations at Rosevale, New Brunswick, and New Glasgow, Nova Scotia. He also visited the experimental oil-shale plant of the U.S. Bureau of Mines at Rulison, Colorado, and made a departmental report on the experiments and operations there. Mr. Connell's services were utilized in connexion with bituminous sands paving operations by the Canadian National railways at Jasper park, Alberta. Messrs. Swinnerton and Connell also assisted in the analyses survey of Canadian crude petroleum oils.

P. V. Rosewarne and H. M. Chantler did the field and laboratory work of the Oils and Natural Gas Section. Mr. Rosewarne, assisted by R. J. Offord, conducted an analyses survey for hydrocarbon and helium content of natural gases from different parts of the country, with special reference to Turner Valley field in Alberta. In this work the proffered laboratory facilities of the Institute of Technology in Calgary were used for setting up and operating a special gas analysis apparatus, and the hearty co-operation of the officials of the Institute, of the Dominion Department of the Interior (Office of Supervisory Mining Engineer) in Calgary, as well as the operators in Turner Valley field is herewith acknowledged. A co-operative arrangement was entered into by the Mines Branch with the Alberta Government "Committee on Inquiry into Fuel and Lubricating Oils," of which Major H. G. L. Strange is chairman, under which an analysis survey of motor fuels used in Alberta was initiated under the supervision of Mr. Rosewarne. Check work was also undertaken for this committee on lubricating oil analysis and Mr. Rosewarne's services as a consultant placed at their disposal. Mr. Chantler accompanied Mr. Rosewarne on a visit to oil refineries and producing fields in western Ontario and studied

the analyses of crude oils as part of a crude oil survey. Mr. Rosewarne also visited crude oil producing and refining operations in Oklahoma, including the Experiment Station of the U.S. Bureau of Mines at Bartlesville, and the Bureau's experimental helium plant at Amarillo, Texas.

J. H. H. Nicolls and C. B. Mohr were mostly occupied in the analytical work of the Solid Fuels Analyses Section; the former examined the indexing and compiling of the results pertaining to the Canadian coals and other solid fuels, and the latter took immediate charge of the proximate analyses and calorific value work according to standard laboratory procedure. Mr. Nicolls, with the assistance of E. Swartzman, investigated certain methods of analysis requiring revision, conducted further coking index experiments, and continued his coal classification studies with special reference to Canadian coals.

T. E. Warren and E. A. Smith conducted special laboratory investigations on hydrogenation and low temperature carbonization, respectively. Mr. Warren was specially occupied with the setting up and preliminary operation of a high pressure bomb and accessory equipment, and Mr. Smith conducted a series of test runs on Canadian coals and peat according to different standard low temperature carbonization methods, with the development of a non-expensive standard laboratory method in view.

Chemical Laboratory Work

The routine chemical laboratory work was conducted in two sections, namely, the Solid Fuels Analyses Section and the Oils and Natural Gas Section.

The services of R. J. Young as Assistant Chemist were concerned mainly with gas analysis work pertaining to tests in the pulverized fuel fired experimental boiler, and to carbonization and retorting tests on coals and oil-shales.

During the year a total of 1,165 samples of solid, liquid, and gaseous fuels were examined. Of these 769, that is, approximately 68 per cent, pertained to investigations conducted within the division, whereas the remaining 32 per cent originated outside the division. Of the total samples submitted from outside, 43 were from other divisions of the Mines Branch, 102 from the Geological Survey, 88 from the Department of Pensions and National Health, 69 from provincial government departments, and 94 from public institutions, commercial firms, and private individuals. The following is a classification of the various kinds of fuels analysed:

Solid fuels; total samples examined		754
Coals (various kinds)	681	
Cokes and chars	41	
Peat and miscellaneous	32	
Liquid fuels; total samples examined		200
Gasoline	96	
Lubricating oils	27	
Crude oils	64	
Other petroleum, oils, and miscellaneous	13	
Gases from coals, oil-shales, etc.		91
Oil-shales		36
Bituminous sands		42
Natural gas		42
Total		1,165

CERAMICS AND ROAD MATERIALS DIVISION

Howells Fr chette, Chief of the Division, reports continued increase in calls of clay products manufacturers for technical assistance in the utilization of Canadian clays and in the various steps of processing.

During the year increased kiln capacity was required. This was furnished by the building of a second down-draught gas kiln capable of developing a temperature of about 1,500 degrees C.

The usual annual report on "Investigations in Ceramics and Road Materials" was not issued for the year 1928. The material that would have appeared in this will be incorporated into a report covering the two years 1928 and 1929. The report in manuscript on the road materials investigation of Prince Edward Island for 1928 was transmitted as soon as it was completed to the Minister of Public Works of Prince Edward Island, and other information was made available to interested persons, so that very little inconvenience has been occasioned by delaying the printing of the report on the work of the year.

CERAMICS

As was mentioned in last year's report, the investigation on the treatment of tender-drying clays of the Prairie Provinces to overcome drying defects was extended to include clays from other parts of the Dominion. Following the very successful results obtained in correcting drying defects in the manufacture of brick at a plant in Alberta, a request for assistance in relieving serious troubles experienced in the drying of structural hollow tile was received from the Montreal Terra Cotta Company. Although the general cause of the trouble at this plant was found to be similar to that at the Alberta plant, the character of the two clays differed in several respects and local factors had to be considered, therefore this case was attacked as a separate problem. Chemical treatment of the clay was again found to be effective and well within the limits of economic cost. Following laboratory investigation by J. G. Phillips, plant trials, using sodium chloride as a coagulant, were run, and gave satisfactory results. A definite treatment was formulated and was at once adopted as regular plant procedure. This resulted in shortening the drying time, greatly reducing drying breakage, increasing the production capacity of the plant, and improving the quality of the ware.

During the summer further work was done by Mr. Phillips on the pre-heating of clays to improve their drying properties. Several trial runs were made with a small rotary kiln at a brick plant in Alberta to learn the effect of bulk treatment.

Continued work by L. P. Collin is in progress on the compounding of ceramic bodies for electrical heating devices. In the early part of this investigation caustic magnesia was used in the mixtures and was found to reduce the plasticity and the green-bond strength of the ball clay to a marked degree and to cause the firing shrinkage of the bodies to be unduly high. The substitution of dead-burned magnesite for the caustic magnesia is now being tried out. Improvement has been noted in the working properties of the mixtures. Burning trials are to be made in the near future to determine whether the shrinkage will be decreased, and the effects of the substitution on the physical properties of the finished product.

A large part of Mr. Collin's time has been devoted to the investigation for the production of grey brick. Experiments were made in the laboratory to find a suitable grey slip which could be sprayed on the faces of the brick. Satisfactory results were obtained, but tests made at the Citadel Brick Company's plant at Boischatel, Que., gave results quite different from those obtained in the laboratory. After trials with many mixture adjustments good grey colours were obtained, but the degree of vitrification was not thoroughly satisfactory and further adjustment of fluxes will be necessary.

Mr. Collin conducted an investigation on the bonding strength of ball clays in the green state. It had been found that the tentative standard test for transverse strength as adopted by the American Ceramic Society was unsuitable for the western Canada ball clays. Transverse tests were made on nineteen Canadian, four English, and seven United States ball clays in accordance with

the tentative standard method and also with a different method to demonstrate the unsuitability of the tentative method and to show the more correct results obtainable by this second method.

At the beginning of a general investigation of the fireclay resources and refractories industry of Canada, J. F. McMahon spent two and one-half months in Nova Scotia and New Brunswick, gathering samples and data. Incidental to this work in the Maritime Provinces he sampled a number of clay deposits and studied local conditions with a view to reporting upon the opportunities offered for the establishment of a floor and roofing-tile industry close to tide-water. The testing of these samples has revealed some very satisfactory raw material.

At the request of the Turner Valley Waste Gas Committee, an investigation was undertaken of the clay resources of Turner valley and adjacent territory to determine the character of the clays that might constitute sources of supply of raw material for possible clay-working industries that could utilize the available natural gas for fuel. Professor W. G. Worcester, of the University of Saskatchewan, was engaged to carry out this investigation and has submitted a report to the committee. Eighty-two samples were collected and were later subjected to standard tests.

During the year one hundred and nine samples of clays and shales were tested. Tests were made on three samples of bentonitic material, five samples of mineral pigment, two samples of volcanic ash, one sample of pyrophyllite, and one sample of sericite. Determinations of strength were made on three samples of brick and tile.

The research on the manufacture of high-grade refractory brick from Canadian magnesite continued throughout the year. This investigation is being made in co-operation with the National Research Council of Canada.

ROAD MATERIALS

R. H. Picher made a survey of the road gravel resources and collected samples for testing in the area lying between Waltham and Quebec to the north of Ottawa and St. Lawrence rivers, and also in a portion of the Eastern Townships of Quebec.

In addition to the testing of one hundred and forty-seven samples gathered in the field, seven samples were tested for the Highway Department of Nova Scotia and eight from other sources.

Several samples of gumbo soils were obtained from Alberta and were subjected to a series of experiments by Mr. Phillips to learn whether chemical treatment with coagulants would so alter their characteristics as to materially improve them as road building materials. In many sections in the Prairie Provinces where stone and gravel cannot be obtained locally, the roads made on the gumbo soils are almost impassable in wet weather due to the stickiness of this material and the rutting due to its inability to carry loads when wet.

Treatment with lime in the laboratory was found to improve it greatly but whether the improvement is sufficient to warrant the cost can be determined only by the treatment of trial stretches on travelled roads. A decision has not yet been reached whether this will be undertaken.

CHEMISTRY DIVISION

F. G. Wait, Chief of Division, reports:

From April 1, 1929, to March 31, 1930, fifteen hundred and sixty-five specimens have been reported on.

The work of the different members of the chemical staff has been as follows:

H. A. Leverin investigated a new process for manufacturing peat fuel. He collected data regarding the development of the sponge iron process in Europe, through correspondence with investigators and translation of publications. He made a number of analyses of minerals—including a number of brines and rock salts.

E. A. Thompson made complete analyses of thirty samples of feldspar. Several others were analysed for potash content only. He also made complete analyses of two samples of water and of several samples of limestones, of dolomites, of clay, and of diatomite, as well as of several samples of miscellaneous materials. He also made microscopic examinations of several minerals and made a large number of mineral identifications.

A. Sadler had charge of the furnace assays. He tested seven samples for radioactivity, and examined six samples of earth as to their suitability for use as fullers' earth. He made complete analysis of twenty-seven sands, fourteen clays, and partial analysis of a large number of specimens.

J. Moran's principal work has been the analysis of the air sampled in the coal mines of western Canada. One hundred and eighty-six such samples have been analysed and reported. He designed and constructed a special apparatus for the analysis of natural gas samples and also one for the determination of small quantities of carbon monoxide. He has also carried out experiments to determine the efficiency of new re-agents for the estimation of carbon monoxide. An investigation was made into the nature of the electric charge on various insecticides and field experiments bearing on the same carried out in conjunction with the Department of Agriculture. He also made partial analyses of several limestones.

C. L. O'Brian analysed a large number of limestones and dolomites collected by officers of the Mineral Resources Division and of the Geological Survey.

DOMINION OF CANADA ASSAY OFFICE, VANCOUVER, B.C.

G. N. Ford, Manager of the Dominion of Canada Assay Office, reports:

The report of the Assay Office for the calendar year ending December 31, 1929, shows the net value of gold bullion deposited during the year amounted to \$1,032,128.51, as compared with \$1,673,926.65 during the previous year.

The value of gold bullion deposited from British Columbia sources was \$853,409.12, being a decrease of \$65,308.94.

Gold bullion from Yukon territory amounted to \$120,825.77, a decrease of \$572,939.63 from the previous year. This decrease is due to gold from Yukon territory, which formerly was marketed at this office, being shipped during the season just ended to the United States in order to benefit by the premium on United States funds, which prevailed practically throughout the year.

Deposits at this office from all other sources totalled in value \$57,893.62, a decrease over the previous year of \$3,549.57.

The purchase and disposal of the gold bullion deposits during the year 1929 required a total of 1,348 meltings and 1,348 assays, quadruplicate assays being made in each instance. This includes the melting into large bars of the smaller deposits after purchase and of the assaying of same before shipment.

The aggregate weight of all deposits before melting was 69,985.84 troy ounces, and after melting 61,279.85 troy ounces, included in which were ninety deposits containing a large proportion of lead requiring to be cupelled in a large muffle furnace. The total weight of these deposits before melting was 28,523.59 troy ounces and after melting and cupelling 21,645.40 troy ounces, showing a loss by melting and cupellation of 24.114 per cent. The average loss in melting all other bullion deposited, viz., 41,462.25 troy ounces before melting and 39,634.45 troy ounces after melting, was 4.408 per cent.

The loss in weight by assaying (base and parted silver) was 30.28 troy ounces, making the weight of bullion after melting and assaying 61,240.57 troy ounces, the average fineness of same being $814\frac{3}{4}$ gold and 113 silver.

The net value of the gold and silver contained in deposits was \$1,032,128.51, and was received from the following sources:

Bars, nuggets, dust, and amalgam	Number of deposits	Before melting and assaying (troy ounces)	After melting and assaying (troy ounces)	Net value
British Columbia.....	429	54,844.08	46,932.21	\$ 853,409 12
Yukon territory.....	154	7,970.97	7,877.84	120,825 77
Alaska.....	1	31.71	31.36	572 70
Washington.....				
Alberta.....	2	7.09	6.11	112 46
California.....	1	162.59	162.57	2,723 52
Dental and jewellery scrap.....	705	6,969.40	6,239.48	54,484 94
	1,292	69,985.84	61,249.57	\$1,032,128 51

DRAUGHTING DIVISION

H. E. Baine, Chief Draughtsman, reports:

Maps Published During the Fiscal Year Ending March 31, 1930

Map No. 703. Principal Amber Mica Mines and Occurrences in the Province of Quebec; scale, 3.95 miles to 1 inch.

Map No. 704. Principal Amber Mica Mines and Occurrences in the Province of Ontario; scale, 3.95 miles to 1 inch.

Map No. 715. Gypsum Occurrences in Canada.

Map No. 717. Saline Springs and Salt Areas in Canada.

Map No. 718. Michigan-Ontario Salt Basin.

Map No. 709. Asbestos Region, Quebec (not published).

Two hundred and three page maps, drawings, charts, and flow-sheets were prepared during the year.

Five hundred and twenty-two negatives, black and white and blue prints were made from the blue-print machine.

Twelve hundred and thirty-nine negatives, and black and white prints were made from the photostat machine.

Two hundred and twenty-five halftone blocks and zinc cuts were sent out, received, and filed during the year.

DISTRIBUTION OF PUBLICATIONS

During the fiscal year ending March 31, 1930, the distribution of Mines Branch reports, bulletins, memorandum series, press bulletins, maps, list of mine operators, etc., amounted to 40,392 copies.

LIBRARY

Mrs. O. P. R. Ogilvie, Librarian, reports:

Accessions to the Library, 1929

Books (by purchase)	314
Books (by gift)	116
Books (by transfer from other Government libraries)	109
Books (complete unbound volumes)	293
Books added to the circulating division of Library	819
Canadian Government documents (by exchange and gift)	1,840
British and Foreign Government documents (by exchange and gift)	1,105
Scientific societies bulletins, proceedings, and transactions (by exchange and gift)	1,344
Trades catalogues (by gift)	271

Thirty-seven bound volumes and three hundred and ninety-eight unbound volumes and pamphlets were received as a gift from the Library of the late J. S. Hudson.

Nine hundred and sixteen books were bound for the Library during the year. Additional shelving was installed and for the first time

Additional shelving was installed and further re-adjustments were made to accommodate the annual increase, which has this year exceeded the increase of any previous year.

EXPLOSIVES DIVISION

Lt.-Col. G. Ogilvie, Chief Inspector of Explosives

Staff

The division suffered the loss, by death, of Mr. Joseph G. S. Hudson, who had served as Inspector of Explosives since its inception in 1919. Keenly interested in its operation, the value of his work was enhanced by a personality which, in the task of introducing new regulations, did much to enlist the goodwill and co-operation of those affected thereby.

He was succeeded by Mr. M. C. Fletcher, formerly chemist in the division.

Factories

The Mexco Company's factory at Parry Sound was finally closed at the end of 1929, and the small firework factory of Dominico Ruffo at Cornwall, Ontario, did not resume operations.

The production of explosives for the year 1929 showed an increase of about 12½ per cent.

No serious accident occurred in licensed factories during the year ending March 31, 1930. An employee of the Macdonald Metal Products Company caused the explosion of a small quantity of dried composition on a stamp plate, as used in transferring drops of composition on to a sheet in the manufacture of caps for toy pistols, which he was improperly cleaning with a nail. The burns he received entailed seven days' absence from work.

The spontaneous ignition of carbonaceous material in a soda dry house in the factory at James Island, B.C., resulted in damage to the building, but only in very minor burns to an employee.

A small fire, quickly extinguished, in a building used for the manufacture of railway fusees at Brownsburg, the spontaneous combustion of an oily rag in an empty can in a 'dope' house (for non-explosive ingredients), and the ignition of woodwork in a nitric acid house, caused by the passage of nitro cake down a chute, did not cause damage of any consequence.

Magazines

There were 288 magazines under licence on March 31, 1930, and 231 licences for temporary magazines had been issued during the year—in all, an increase of 47 over the number for the previous year. Thefts of explosives, aggregating 289 pounds of high explosives and 1,000 detonators, were reported from five magazines that had been forcibly entered. There is also to record an unsuccessful attempt on a magazine, and the recovery of eleven pounds of dynamite stolen from another.

Explosives Condemned

High explosives, 1,906 pounds, black blasting powder, 150 pounds, distributed over twenty-one magazines or unlicensed premises, were condemned on inspection and destroyed.

In addition, there were several instances of the finding of small quantities of explosives cached in the bush, or left and forgotten elsewhere, which were destroyed. In some cases, these were found by the Royal Canadian Mounted Police, in others, reported to the police by the finders, and it is a hopeful sign that, in a few instances, the finders were children who wisely did not themselves tamper with the explosives.

Prosecutions

Of the two undecided cases referred to in the last report, one, relating to the unlawful keeping of explosives in unlicensed premises, resulted in a conviction, a fine being imposed; and the other, relating to the keeping of explosives found in a disused quarry, was dismissed on appeal, responsibility not being established as against the defendant. Proceedings were taken in seven other cases, and convictions obtained.

In one case the offence lay in having a larger quantity of explosives in a magazine than was prescribed by the licence. The other six cases referred to violations of the regulations by work parties or private users of explosives. They were all instances of negligent keeping of explosives, under conditions such as to invite accidents or to facilitate pilfering.

Importations

Six hundred and three permits and forty-three special permits, for the importation of explosives, were issued during the year. No difficulty is experienced in regard to the importations of explosives other than fireworks. The great variety of fireworks on the market necessitates careful checking of those varieties it is proposed to import, to ensure that they have been authorized, but, after this precaution, it is seldom that any from the United States or Europe have to be refused admission at port of entry. In the case of Chinese fireworks, the rejections, which in the past have been very considerable, show a marked reduction, amounting during the year to about 2 per cent.

Authorization of Explosives

Samples of twenty-three explosives were examined and authorized. Eighty-five varieties of fireworks were also submitted, of which sixty were authorized.

Accidents

A summary of accidents with explosives, which occurred during the year 1929, is given in the annual report for the division. Accidents in the use of explosives, and from other miscellaneous causes, such as playing with explosives, accounted for the death of sixty-five persons and injury to two hundred and one others—a slight increase over the figures for the previous year, respectively sixty-four and one hundred and ninety-two. The consumption of explosives had increased in a greater degree. The accidents arising from playing with detonators and other explosives accounted for two deaths and fifty-one persons injured, as compared with seven deaths and eighty injured in the preceding year—an improvement which gives ground for the hope that the warnings given to children in schools, and the constant activity of the Royal Canadian Mounted Police in checking careless practice in the keeping of explosives, are materially helping towards the prevention of this class of accident.

General

The inspections of stores and other places where small quantities of explosives are kept, have not shown other than minor irregularities, readily rectified in the case of regular dealers. Instances of more serious irregularities and general carelessness are met with in regard to explosives kept by private users, or for use in small contract work. Some of these resulted in prosecutions, as already indicated. Inspectors of the division made 679 inspections of unlicensed premises, and about 2,400 were made by members of the Royal Canadian Mounted Police whose watchfulness, in all parts of the Dominion, brings a steady insistence on the observance of good and lawful practice in the keeping of explosives.

EDITORIAL DIVISION

F. Nicolas, *Editor-in-Chief*

During the fiscal year thirty-nine separate English publications were issued by the department, consisting of annual reports, memoirs, bulletins, and pamphlets; there were issued also eighteen lists of mine operators and mines. Eight reports were published in French.

At the end of the fiscal year there were in the hands of the King's Printer eleven English reports of the Geological Survey, six English reports and two French translations of the National Museum, twelve English reports and two French translations of the Mines Branch, and one English report of the Explosives Division. Several reports, also, were being edited preparatory to dispatch for printing, and several French translations are now nearly ready for the printer.

The following list includes the publications issued by the various branches of the department during the fiscal year, under the supervision of the Editor-in-Chief, and the French publications distributed¹ during that period:

DEPARTMENT OF MINES

Report
No.*English Publications*

- 2217 *Report of the Department of Mines for the Fiscal Year ending March 31, 1929*: 58 pages; 1 figure; 3,000 copies; published February 1, 1930.

French Translations

- 2203 *Rapport du Ministère des Mines pour l'année financière se terminant au 31 mars, 1928*: 67 pages; 1 plate; 1 figure; 1,250 copies; published November 12, 1929.
2231 *Rapport du Ministère des Mines pour l'année financière se terminant au 31 mars, 1929*: 62 pages; 1 figure; 1,250 copies; published March 31, 1930.

GEOLOGICAL SURVEY

English Publications

- Information for Officers of the Geological Survey and National Museum*: 34 pages; 3 figures; 500 copies; published April 4, 1929.
2176 Memoir 155. *Horton-Windsor District, N.S.*—by W. A. Bell: 268 pages; 36 plates; 14 figures; 1 map; 2,500 copies; published November 9, 1929.
2181 Memoir 156. *Gold Fields of Nova Scotia*—by Wyatt Malcolm: 253 pages; 40 plates; 10 figures; 4 maps; 1,500 copies; published September 27, 1929.
2191 Memoir 157. *Preliminary Report on Woman and Ridout Map-areas, Sudbury District, Ont.*—by R. C. Emmons and Ellis Thomson: 30 pages; 2 maps; 2,500 copies; published August 16, 1929.
2193 Memoir 158. *Britannia Beach Map-area, B.C.*—by H. T. James: 139 pages; 4 plates; 12 figures; 2 maps; 2,500 copies; published October 8, 1929.
2197 Memoir 159. *Bear River and Stewart Map-areas, Cassiar District, B.C.*—by George Hanson: 84 pages; 5 plates; 14 figures; 2 maps; 2,500 copies; published October 29, 1929.
2202 *Summary Report of the Geological Survey, Department of Mines, for the Calendar Year 1928, Part A*: 210 pages; 4 plates; 11 figures; 4 maps; 3,000 copies; published October 10, 1929.
2206 *Summary Report of the Geological Survey, Department of Mines, for the Calendar Year 1928, Part B*: 131 pages; 5 plates; 2 figures; 1 map; 3,000 copies; published October 7, 1929.

French Translations

- 2188 *Série de la Géologie appliquée n° 1. Géologie et Minéraux industriels du Canada*—by G. A. Young: 276 pages; 38 plates; 1,450 copies; published February 11, 1930.

¹ The distribution of English publications was made as usual by the branches that prepared them.

- 2201 *Rapport sommaire de la Commission géologique, Ministère des Mines, pour l'année civile 1927, Partie C* (extraits): 54 pages; 2 maps; 1,250 copies; published November 30, 1929.

NATIONAL MUSEUM OF CANADA

English Publications

- Bulletin 47. Anthropological Series 9. *Some Shell Heaps in Nova Scotia*—by H. I. Smith and W. J. Wintemberg: 192 pages; 32 plates; 1 figure; 1,000 copies; published October 24, 1929.
- Bulletin 53. Biological Series 15. *A Faunal Investigation of Southern Baffin Island*—by J. D. Soper: 143 pages; 7 plates; 1 figure; 1,000 copies; published April 24, 1929.
- Bulletin 54. Geological Series 49. *Contributions to Canadian Palæontology*—by F. H. McLearn and C. M. Sternberg: 80 pages; 22 plates; 1,000 copies; published September 5, 1929.
- Bulletin 55. Biological Series 16. *A Generic Revision of North American Agrotid Moths*—by J. H. McDunnough: 78 pages; 53 figures; 1,000 copies; published April 23, 1929.
- Bulletin 56. *Annual Report for 1927*: 107 pages; 2 plates; 3,500 copies; published October 11, 1929.
- Separate: *Notes on the Beothuk Indians of Newfoundland*—by D. Jenness: 3 pages; 2 plates; 100 copies; published November 4, 1929.
- Separate: *Preliminary Report on Field Work in 1927*—by W. J. Wintemberg: 2 pages; 100 copies; published October 22, 1929.
- Separate: *Kitchen-Middens of the Pacific Coast of Canada*—by H. I. Smith: 5 pages; 100 copies; published November 4, 1929.
- Separate: *Materia Medica of the Bella Coola and Neighbouring Tribes of British Columbia*—by H. I. Smith: 22 pages; 100 copies; published November 4, 1929.
- Separate: *Birds and Mammals of the Mount Logan Expedition, 1925*—by H. M. Laing, R. M. Anderson, and P. A. Taverner: 39 pages; 100 copies; published November 8, 1929.
- Bulletin 57. *A Transverse Polyconic Projection for General Maps of Canada*—by C. O. Senecal: 17 pages; 3 figures; 2,000 copies; published August 17, 1929.
- Bulletin 58. Geological Series 50. *Mesozoic Palæontology of Blairmore Region, Alberta*—by S. S. Buckman, E. W. Berry, and F. H. McLearn: 144 pages; 19 plates; 1 figure; 1,000 copies; published October 28, 1929.
- Bulletin 59. Anthropological Series 13. *Anthropometry of the Cree and Saulteaux Indians in Northeastern Manitoba*—by J. C. Boileau Grant: 73 pages; 5 plates; 4 figures; 1,000 copies; published October 25, 1929.
- Bulletin 62. *Annual Report for 1928*: 37 pages; 1 figure; 2,500 copies; published December 26, 1929.
- Separate: *A study of the Canadian Races of Rock Ptarmigan (*Lagopus rupestris*)*—by P. A. Taverner: 10 pages; 300 copies; published December 28, 1929.

French Translations

- Bulletin 50. *Rapport annuel 1926* (extraits): 76 pages; 10 plates; 1 figure; 1,250 copies; published March 21, 1930.

MINES BRANCH

English Publications

- Report No.
695 *Investigations in Ore Dressing and Metallurgy, 1927*: 186 pages; 6 plates; 1 figure; 4,000 copies; published June 26, 1929.
- 696 *Investigations of Fuels and Fuel Testing, 1927*: 107 pages; 10 plates; 9 figures; 4,000 copies, published November 26, 1929.
- Separate: Part I—*Solid Fuels*: 70 pages; 10 plates; 3 figures; 500 copies; published September 18, 1929.
- Separate: Part II—*Liquid Fuels*: 37 pages; 6 figures; 500 copies; published September 18, 1929.
- 697 *Investigations in Ceramics and Road Materials, 1927*: 80 pages; 3,500 copies; published October 2, 1929.
- Separate: *The Testing of Non-Bituminous Road Materials*—by R. H. Picher: 13 pages; 1,000 copies; published November 7, 1929.
- 698 *Industrial Fuel and Power Statistics of Ontario, 1925*—by E. S. Malloch and C. E. Baltzer: 23 pages; 12 figures; 4,000 copies; published April 19, 1929.
- 701 *Mica*—by H. S. Spence: 142 pages; 21 plates; 10 figures; 2 maps; 1 chart; 4,000 copies; published March 3, 1930.

- 705 *Comparative Tests on Various Fuels when Burned in a Domestic Hot-Water Boiler*—by E. S. Malloch and C. E. Baltzer: 92 pages; 5 plates; 6 figures; 6 charts; 4,000 copies; published September 23, 1929.
- Core Drilling Bituminous Sands of Northern Alberta*—by S. C. Ellis. (Advance section of *Investigations of Mineral Resources and the Mining Industry, 1928*): 26 pages; 4 plates; 1 figure; 500 copies; published August 12, 1929.

Lists of Mines and Mine Operators in Canada:

- Coal: 2,000 copies; published April 25, 1929.
- Manufacturers of Clay Products: 1,000 copies; published April 25, 1929.
- Stone Quarry Operators: 1,000 copies; published April 25, 1929.
- Silver: 1,000 copies; published June 29, 1929.
- Graphite: 1,000 copies; published July 9, 1929.
- Sand and Gravel Deposits: 1,500 copies; published July 17, 1929.
- Copper, Copper-Zinc, and Nickel-Copper: 1,000 copies; published August 8, 1929.
- Sand-Lime Brick Plants: 1,000 copies; published August 9, 1929.
- Mica: 1,000 copies; published August 14, 1929.
- Gypsum: 1,000 copies; published August 15, 1929.
- Feldspar: 1,000 copies; published August 15, 1929.
- Magnesium Sulphate (Epsomite), etc.: 1,000 copies; published August 19, 1929.
- Abrasives: 1,000 copies; published August 23, 1929.
- Silver-Lead-Zinc: 1,000 copies; published August 29, 1929.
- Milling Plants: 1,000 copies; published September 7, 1929.
- Metallurgical Works: 1,000 copies; published September 9, 1929.
- Natural Gas and Petroleum Wells: 1,500 copies; published October 11, 1929.
- Gold: 1,000 copies; published November 15, 1929.

DOMINION FUEL BOARD

Report
No.

English Publications

- 8 *Why You Should Insulate Your Home* (Third edition)—by G. D. Mallory: 15 pages; 7 drawings; 25,000 copies; published May 27, 1929.
- 12 *Humidity in House Heating*—by E. S. Martindale: 38 pages; 13 drawings; 26,200 copies; published October 17, 1929.
- Reprint: 50,000 copies; published March 14, 1930.
- 14 *Comparison of the Cost and Convenience of House Heating with Various Fuels*—by E. S. Malloch: 8 pages; 1 figure; 5,000 copies; published September 30, 1929.

French Translations

- 11 *Deuxième rapport des travaux de la Commission fédérale du Combustible, 1923-1928*: 60 pages; 5 plates; 1 figure; 1 map; 5,000 copies; published June 18, 1929.
- 13 *L'humidité dans les maisons chauffées*—by E. S. Martindale: 40 pages; 13 figures; 5,000 copies; published March 12, 1930.

EXPLOSIVES DIVISION

English Publications

- 25 *Annual Report of the Explosives Division for the Calendar Year 1928*: 19 pages; 2,000 copies; published May 8, 1929.

French Translations

- 26 *Rapport annuel de la Division des Explosifs pour l'année civile 1928*: 20 pages; 1,000 copies; published September 26, 1929.

DISTRIBUTION OF FRENCH PUBLICATIONS

The French publications of the Department of Mines, including those of the Geological Survey, the Mines Branch, and the Explosives Division, are distributed by the Editorial Division. During the fiscal year 1929-30, 8,619 copies were distributed in Canada and foreign countries, as follows: 4,274 copies to addresses on the mailing lists, through the Printing Bureau Distribution Office, and 4,345 copies in compliance with written or personal requests, from the office of the Editorial Division. This distribution does not include, however, the publications sent out directly by the Dominion Fuel Board and the Explosives Division to their correspondents.

ACCOUNTING DIVISION

ACCOUNTANT'S STATEMENT

P. R. Marshall

The funds available for the work and expenditure of the Department of Mines for the fiscal year ending March 31, 1930, were:

	Grant	Expenditure	
		Amount	Total
	\$ cts.	\$ cts.	\$ cts.
DEPARTMENT—			
Amount voted by Parliament.....	118,329 00		
Civil Government salaries.....		71,541 61	
Grant to Imperial Institute.....		12,848 00	
Civil Government contingencies.....		11,918 84	
Expenses of the Explosives Division.....		9,607 08	
Grant to Canadian Institute of Mining and Metallurgy.....		3,000 00	
Miscellaneous gratuities.....		570 00	
			109,485 53

REPORT OF THE MINISTER OF AGRICULTURE

1929-1930

*To His Excellency the Right Honourable Viscount Willingdon, G.C.S.I.,
G.C.M.G., G.C.I.E., G.B.E., Governor General and Commander in Chief
of the Dominion of Canada:*

MAY IT PLEASE YOUR EXCELLENCY:

I have the honour to submit to your Excellency a report of the Department of Agriculture for the fiscal year ending March 31, 1930.

The work of the department was carried out in a most satisfactory and efficient manner and there will be found included a summary of the operations of the different branches of the department, all of which is laid before your Excellency under the respective headings.

The following Orders in Council establish new regulations or amend existing regulations under the various acts and policies administered by the department.

By Order in Council P.C. 559 of April 3, 1929, Section 17 of the regulations under the Meat and Canned Foods Act dealing with condensed and evaporated milk were rescinded.

By Order in Council P.C. 731 of May 1, 1929, the regulations under the Fruit Act were amended whereby the importer or his representative may use a number instead of his name for identification purposes.

By Order in Council P.C. 771 of May 8, 1929, the regulations under the Fruit Act governing the dimensions and specifications of fruit packages were amended.

By Order in Council P.C. 772 of May 8, 1929, the regulations under the Destructive Insect and Pest Act were amended to make certain changes governing the admission of nursery stock into Canada and the movement of corn in Canada.

By Order in Council 870 of May 23, 1929, the regulations under the Dairy Industry Act governing brands placed on cheese or packages containing cheese or butter were amended.

By Order in Council P.C. 852 of May 23, 1929, regulations governing the labelling of canned goods offered for export out of Canada were established under the Meat and Canned Foods Act.

By Order in Council P.C. 920 of May 29, 1929, the regulations under the Meat and Canned Foods Act governing the inspection of preserved fruits and vegetables were amended.

By Order in Council P.C. 1045 of June 18, 1929, regulations governing the dimensions of celery crates were established under the Root Vegetable Act.

By Order in Council P.C. 1159 of July 2, 1929, the Egg regulations under the Live Stock and Live Stock Products Act in regard to the marketing of eggs were amended.

By Order in Council P.C. 1146 of July 2, 1929, the regulations under the Destructive Insect and Pest Act were amended to make certain changes governing the admission of nursery stock into Canada from foreign countries.

By Order in Council P.C. 1158 of July 2, 1929, certain amendments were made to the regulations under the Fruit Act governing the grades established for tomatoes, etc.

By Order in Council P.C. 1896 of September 25, 1929, the Restricted Area Regulations under the Animal Contagious Diseases Act in regard to cattle shipped without testing to an abattoir in a restricted area were amended to provide for the feeding and finishing of said cattle.

By Order in Council P.C. 2010 of October 9, 1929, the regulations under the Dairy Industry Act were amended by the addition of regulations governing the definition of cheese.

By Order in Council P.C. 2019 of October 9, 1929, the regulations under the Cold Storage Act governing the control of cold storage warehouses were amended.

By Order in Council P.C. 36 of January 10, 1930, regulations governing the slaughter and inspection of horses and horse-meat were established.

By Order in Council P.C. 35 of January 10, 1930, the regulations governing the establishment of restricted areas under the Animal Contagious Diseases Act were amended.

By Order in Council P.C. 368 of February 17, 1930, the regulations under the Destructive Insect and Pest Act were amended to make certain changes in the regulations governing the importation of plants and wheat into Canada and the movement of corn, etc., in certain provinces.

By Order in Council P.C. 555 of March 12, 1930, the regulations under the Animal Contagious Diseases Act governing the importation of foreign hides, skins and by-products were amended.

By Order in Council P.C. 556 of March 12, 1930, the regulations under the Meat and Canned Foods Act were amended in order to provide for the exemption of reindeer meat from the operation of that Act.

By Order in Council P.C. 557 of March 12, 1930, the general regulations under the Destructive Insect and Pest Act as referring to the inspection for certified seed were amended.

DOMINION EXPERIMENTAL FARMS AND STATIONS

In Western Canada crop conditions were about up to the average by the end of May, but the unusual and prolonged drought which set in in June caused the crops to deteriorate steadily. Grain matured rapidly and harvesting and threshing were completed in record time. Inspections showed a larger proportion of higher grades than for several years, but yields, which varied considerably, were on the whole not only greatly inferior to those of 1928 but also much below the average.

Weather conditions in Ontario also had the effect of reducing grain yields. The hay crop was well up to the average, but potatoes gave a very low yield and corn was only a fair crop. Quebec received rather more rainfall than Ontario and results were superior to those of 1928. In the Atlantic provinces the season's operations generally were satisfactory, the apple crop in Nova Scotia being the largest in several years.

The British Columbia apple crop was much smaller than that of last year, but strawberries and cherries yielded heavily. Fair yields of grains of good quality were harvested.

Pastures throughout Canada showed the effect of drought.

AREAS AND ESTIMATES OF YIELD AND VALUE OF FIELD CROPS, 1929

Crop	Area	Yield per acre	Total yield	Weight per measured bushel	Average price	Total value
	acres	bush.	bush.	lb.	\$ per bushel	\$

PUBLICATIONS ISSUED

In addition to the regular issues of "Seasonable Hints," and the sending out of several hundred press articles, the following bulletins, pamphlets and circulars were issued during the year:—

BULLETINS, NEW SERIES

- No. 116. Microbiological Studies of Honey.
- No. 118. Seven Years' Experience with the Combined Reaper-Thresher, 1922-1928, on the Dominion Experimental Station, Swift Current, Sask.
- No. 119. The Late Blight and Rot of Potatoes.
- No. 121. Corn Growing in Manitoba.
- No. 122. Close Grazing.
- No. 123. Testing the Producers' Milk for Quality.
- No. 125. Use of Irrigation Water on Farm Crops.
- No. 126. Grading Up the Dairy Cow by the Use of Pure-bred Sires.
- No. 127. Bacteriological Investigations of Milking Machines.
- No. 130. Soil Moisture Experiments in Southwestern Saskatchewan.
- No. 132. Poultry House Construction (Revised).
- No. 134. Garnet Wheat Investigations.
- No. 18. Modern Orchard Practices (Revised).

PAMPHLETS, NEW SERIES

- No. 114. Improvement of Burn-out Lands in Southern Saskatchewan.
 No. 112. Sweet Clover.
 No. 107. Package Bees and How to Install Them.

CIRCULARS, NEW SERIES

 No. 74. Horsetail, A Horse Poisoning Weed.

CENTRAL EXPERIMENTAL FARM

DIVISION OF ANIMAL HUSBANDRY

The imported stallion "Sandy Mac," who has headed the Clydesdale stud at the Central Experimental Farm, Ottawa, for the several years past, was transferred to the Lennoxville Experimental Station in the spring of 1929 and since then a good son of this horse as well as the services of privately owned imported horses have been used at Ottawa. Some very good young mares have been sired by "Sandy Mac," and the eight foals raised in 1929 are very strong and rugged with no evidence of joint ill. Much needed additional accommodation for horses, including facilities for isolation and hospital quarters, was provided during the past year.

Some exceedingly interesting and useful information has been acquired through the practical study of the growing and finishing of commercial cattle. Forty-four head of steers purchased on the Winnipeg market in the early spring were used for this purpose at Ottawa. As fall prices were low they were fed for a winter market. When sold in December there was an increase in profits of \$137.50, as compared with what they would have realized in the fall.

A carload of western heifers of fair quality was also purchased on the Winnipeg market to test their utility as stocker or feeder cattle. They returned little profit and were generally unsatisfactory due to the fact that many of the animals were pregnant.

One hundred and two head of Herefords comprising calves, yearlings, and two-year-olds were brought to Ottawa from the Dominion Range Experiment Station, Manyberries, Alta., with the following objectives in view:—

1. To determine the economy of high class range cattle when fed in Eastern Canada.
2. To determine the most profitable age as relating to purchase and sale.
3. To determine the most profitable methods of finishing calves and yearlings; i.e., calves finished at approximately one year and eighteen months, etc.; finishing during the winter with maximum grain versus utilizing minimum grain, maximum roughage and finishing on grass.
4. To establish contact with and expand the work of the Dominion Range Experiment Station at Manyberries.

Experimental work with dairy cattle at the Central Experimental Farm, Ottawa, is confined to two breeds, namely, Ayrshire and Holstein-Friesian. The line breeding policy consistently followed in recent years has yielded most valuable results and the past year's breeding work was exceptionally satisfactory. It is a source of satisfaction to be able to report very favourable progress towards the control of genital diseases in dairy cattle through the application of the blood test, which work is being carried on in co-operation with the Animal Diseases Research Station of the Health of Animals Branch. The control of tuberculosis in the Central Farm herd still remains a problem, one reactor being discovered in the test made in November, 1929, in the isolated herd of reactors to the blood test.

Notwithstanding the drought, pasture conditions were good and an abundance of well cured hay was harvested. Unfortunately owing to a rearrangement of crop rotations the 1929 crop is largely timothy and this has had a decided influence on the returns from the dairy cattle during the winter.

A number of Holstein females were transferred to the Experimental Station at L'Assomption, P.Q., to establish a foundation herd and eight branch Farms were supplied with high class bulls bred at Ottawa. Several outstanding sires were purchased this year.

In the experimental work with swine during the past year the principal activity has been towards securing the fullest possible information as to the practical application of the Policy of Advanced Registry. Nutritional experiments to determine the optimum level of sodium chloride and potassium iodide were also carried on. Measures for the control of swine parasites were also continued. Attention is also being given to the problem of anaemia in young pigs.

A fairly large flock of Leicester, Shropshire cross bred and grade sheep is being developed with a view to ascertaining the possibilities of sheep farming under conditions in Eastern Canada. Considerable attention has also been given to control measures for the eradication of parasites. A series of pasturing experiments is also being carried on in co-operation with the Divisions of Chemistry and Field Husbandry to ascertain the value of rotated and fertilized pastures as grazed by sheep.

DIVISION OF AGRICULTURAL BACTERIOLOGY

During the past year, in addition to the investigational work carried on by the Division, a good deal of assistance was given to farmers and others through the analysis of samples submitted for bacteriological examination. These samples, numbering 361, consisted of water from farm wells, milk, honey, miscellaneous feeds and feeding stuffs, legume inoculants, etc. Assistance was also given to other Divisions of the Farm.

Considerable information as to the efficacy of legume inoculation under field conditions is being accumulated through the distribution of cultures to farmers, who, in turn, report to the Division.

An investigation regarding the factors concerned with honey spoilage through fermentation has been in progress since 1927. This work is being carried on in co-operation with the Bee Division, the Division of Chemistry and the National Research Council. It is proceeding along the following lines:—

(a) Study of the factors influencing the fermentation of honey by sugar-tolerant yeasts. This includes a physiological study of the yeasts concerned and also a consideration of factors which exert a stimulating or inhibiting effect upon the yeasts causing spoilage. Likewise a biochemical study of honey with a view to determining the presence of yeast growth-promoting factors is under way.

(b) Microbiological and biochemical studies of normal honey. Information is being obtained as to the extent to which normal honey is infected by organisms capable of setting up fermentation. Physical and chemical analyses are likewise made of the samples which have been obtained from all sections of Canada. In this experiment the Bee and Chemical Divisions are co-operating.

(c) Further studies on the sources of infection of honey by sugar-tolerant yeasts. During 1929 attention has been given to the soil.

The results of the work done in 1927 and 1928 have been published in bulletin No. 116, new series.

Contamination from dairy utensils is undoubtedly one of the most serious sources of germ infection of milk. Adequate sterilization of dairy utensils may be obtained by the use of steam or abundant hot water but the proper use of these agents is limited and, where they are not available, the problem is a serious

one. The use of chemicals for this purpose, particularly chlorine compounds, although not yet widely adopted by the producers, is gaining favour and appears to offer a practical alternative to steam or hot water sterilization. However, many factors concerned with the use of chlorine for farm purposes require investigation and the Division of Agricultural Bacteriology is giving its attention to the following points.

(a) The relative efficiency of different compounds in destroying bacteria common to milk.

(b) The corrosive action of various preparations upon the metals most commonly used in dairy utensils.

(c) The value of various preparations as sterilizing rinses for milk cans.

(d) The value of chlorine sterilization in the hands of the average farmer.

(e) The possibility of chlorine compounds being added to milk as a preservative.

Bacteriological studies of *Bacillus alvei*, an organism associated with European Foulbrood of bees, were continued. Its pleomorphic variation is being investigated with regard to the unsettled problem of the cause of the disease in question.

BEE DIVISION

While the past year's honey crop was rather patchy, in most localities the yield was well above the average. The winter of 1928-29 was fairly easy on bee life in Eastern Canada, but in Western Canada winter losses were rather heavy. Unfavourable weather in the spring, followed by long periods of dry weather in the summer when the major honey plants were in bloom, caused the beekeepers some anxiety. However, while the Saskatchewan crop fell short of that of the previous year, the crop in Manitoba exceeded that of 1928, while Ontario, Alberta and British Columbia eclipsed all previous records. Definite reports from the Eastern provinces are not available but good crops have been reported there also. The fall of 1929-30 was exceptionally favourable for the preparation of bees for the winter.

In a comparative test of Carniolan vs. Italian bees, the latter for the sixth successive year have produced a larger amount of honey and have given less trouble in the matter of swarm control.

Experiments have been under way for the past four years, to determine the advisability or otherwise of purchasing package bees in the spring of the year to strengthen weak, overwintered colonies. Only in the first year of the experiment did the strengthened colonies yield enough extra honey to pay for the cost of the package bees. However, in considering these results it must be borne in mind that the past four spring seasons have been decidedly unfavourable to the project.

An interesting experiment has been under way for the past five years to determine the approximate field force of a normal colony of bees. During this period, thirteen calculations have been made, the figures varying from 22,187 to 39,687 but only on two occasions did the figures fall below 31,000. It should be pointed out that these figures were not obtained by actual counts of the bees themselves but by weighing the hives at certain times, and assuming that there are approximately 5,000 bees in a pound.

In co-operation with the Divisions of Chemistry and Bacteriology, a study is being made of honey fermentation and an experiment is underway to determine the effects of temperature and humidity on the keeping qualities of honey. Preliminary work is also underway towards the control of granulation in extracted honey.

This Division is also engaged in the preparation of a scale of standards and regulations to govern the sale of honey on the domestic market. A tentative survey of the opinions of wholesalers, retailers and producers strengthens the view that such standards and regulations are advisable.

DIVISION OF BOTANY

In the field of economic botany the work during the past year was mostly of the usual routine nature. The annual exchange list of seeds collected in the year 1928, comprising the names of 1,369 species and varieties, was distributed to 125 botanical gardens and other institutions, and there was also the usual exchange of seeds and plants.

Another section of the "Bibliography of Canadian Plant Geography" covering the period 1901-10 was published during the year.

One hundred and thirteen surveys of pasture vegetation were made during the past year in connection with pasture renovation experiments in progress on several of the Eastern Experimental Stations.

In view of the growing interest in sodium chlorate and calcium chlorate as herbicides, tests were conducted with these materials. From the results of these tests, it is evident that annuals, and many shallow rooted perennials can be killed with applications that sterilize the soil but little.

The weed surveys were extended Westward through the Fort William and Rainy River districts of Ontario and a beginning was made on a similar survey in the three Prairie Provinces.

Of the 32,030 acres of potatoes entered for certification in 1929, 24,307 acres, or 75.9 per cent passed. This reduction of approximately 20 per cent in the acreages as compared with 1928 was but natural, following a year of overproduction and low prices. However, notwithstanding this the market value of the 1929 exceeded that of 1928 by over 50 per cent. Eighty-six per cent of the acreage of Irish Cobbler entered passed, but only 62 per cent of the Green Mountain entries reached the required field standards. Canadian certified seed remains in strong demand both from home and foreign growers, the fall exports from the 1929 crop having reached approximately 1,250,000 bushels, with indications that when the spring shipments are over the total quantity shipped from the 1929 crop will be not far short of 1,750,000 bushels with a value of well over \$2,000,000.

Nine hundred and fourteen foreign shipments of ornamental plants were intercepted and examined for disease.

The study of heterothallism in *Fomes pinicola* (Sw.) was continued and work was begun on a cytological study of the mycelium of several species of wood fungi.

Many reasearches of great importance are in progress at the various branch Plant Pathological Laboratories located in every province of the Dominion. The Laboratories at Charlottetown, P.E.I., and Fredericton, N.B., are chiefly concerned with diseases of potatoes. Experiments have shown that there is a distinct tendency in potato plants affected with mild mosaic towards greater susceptibility to late blight, at least, in the Green Mountain variety. Special attention is being given to the correlation of meteorological factors, mode of infection, and spread in storage.

The major operations at the Kentville, N.S., laboratory are directed towards apple scab, although considerable attention has also been given to field investigations on the fungus *Sclerotinia sclerotiorum* (Lib.) Massee, which causes a serious wilt of sunflower and hemp locally, and a severe rotting of carrots in storage. Investigations have been conducted on a serious disease of willow, and control measures have been devised.

At the laboratory at Ste. Anne de la Pocatière some very useful observations have been made on virus diseases of potatoes and on bean mosaic. Raspberry inspection and certification work was also continued.

Black knot of plums, peach canker, and peach leaf curl are among the diseases under investigation at the laboratory at St. Catharines, Ont., with special attention being given to improved control measures. The investiga-

tions on raspberry spur blight have been brought to a successful conclusion. Much interesting information has also been obtained from the studies on apple scab.

Experimental data collected at the Dominion Rust Research Laboratory, Winnipeg, during the last three years have shown that cutting a heavily rusted crop of wheat before it reaches the hard dough stage causes a reduction in both yield and grade. Experiments have also shown that a light infection of stem rust does cause appreciable damage to the crop. Both of these findings are contrary to the common belief. A survey has shown that bunt in durum wheat and loose smut in hard red spring wheat is becoming increasingly more prevalent in Western Canada. Both smuts can be controlled by the standard methods of seed treatment, but apparently many farmers have not properly treated their seed. An attempt to emphasize the importance of thorough seed treatment is being made.

Studies of the various root rot and foot rot diseases of cereals form the principal work of the laboratory at Saskatoon. Taxonomic studies of a large number of isolations of *Fusarium* were carried on, and the disease known as "Take-All" was studied in both field and laboratory. Survey trips were taken during the summer in order to keep in close touch with actual conditions with regard to the prevalence of plant diseases throughout Saskatchewan.

Research at the Edmonton Laboratory is directed toward obtaining necessary information concerning the fungi causing root rot diseases of cereals in order to provide a foundation on which to secure natural immunity against these diseases by plant breeding. A study has also been made of winter-killing of sweet clover, common clover, and alfalfa, with promising results.

Fruit and vegetable diseases prevalent in the interior of British Columbia are under investigation at the Summerland laboratory. Practical control measures have been applied for the alleviation of the physiological diseases, die-back, drought sport, and corky-core. Considerable knowledge has also been acquired during the past year on the distribution and severity of perennial canker, and the factors influencing the spread of infection. A spray service was inaugurated this year to advise the growers when to apply the first lime sulphur spray, in order to check the spread of apple scab infection.

In the course of bulb disease investigations conducted at the Saanichton laboratory a study was made of the influence of a number of inorganic mercurial dips as compared with mercuric chloride and formaldehyde, but no significant differences in efficiency were found. The experiments suggested that dips play but a small part in the control of tulip fire and gladiolus scab, and that soil conditions, fertilizer treatment and the removal and destruction early in the season of infected plants were the important control measures. Much valuable information has been obtained also from a study of "spindle tuber", a virus disease of potatoes quite common in British Columbia. Some interesting and rather unexpected results were obtained in the course of an investigation of the soils where the *Rhizoctonia* disease of potatoes was the most prevalent.

CEREAL DIVISION

Since experience has shown that some of the many new varieties of cereals being produced in different parts of the world may be expected to prove of value in Canada, the thorough investigation of such varieties continues to be one of the major activities of the Cereal Division. The evaluation of each variety is made on the basis of field performance in Canada.

While not neglecting the old varieties, this Division depends chiefly upon artificial crossing of carefully chosen varieties used as parents, as a means of obtaining improved types. This artificial crossing work is chiefly confined to

the Central Experimental Farm and the Dominion Rust Research Laboratory, Winnipeg, although more recently a certain amount of this work has been conducted at Brandon and one or two of the other branch Farms.

The chief objective in the spring wheat breeding work is the production of varieties capable of maturing early, of giving high yields of good quality on the one hand and, on the other, of producing high quality and high yielding varieties capable of resisting the ravages of disease, chiefly of wheat stem rust. It will require two or three years more before any of the exceedingly promising varieties under test can be referred to with any reasonable degree of assurance.

Considerable progress has been made in the oat breeding work, while the work with barley has been enlarged, a number of varieties from other countries having been tested, some of which gave promise of being very useful for crossing on some of our own established sorts.

Efforts are also being made to produce varieties of hemp capable of developing seed in this country with a view to eliminating or, at any rate, reducing the importation of hemp seed into Canada.

Much work has been done in isolating strains of flax capable of resisting the disease known as "Wilt", and in developing varieties capable of producing the maximum quantity of seed per acre.

At the Dominion Rust Research Laboratory, Winnipeg, the Cereal Division and the Botanical Division both have staffs of highly trained officers who are engaged in the task of producing a good milling variety of wheat, capable of resisting the most severe epidemics of wheat stem rust. It is confidently expected that the objective will be reached in the very near future.

A shipment of several thousands of bushels of Garnet wheat was despatched to Great Britain and Continental European Countries last spring, in order to obtain information as to the relative merits of this variety for the overseas trade. Trials were made by some of the large milling concerns there, under the direct supervision of the Dominion Cerealists. A detailed report on the results obtained is now in the hands of the department.

The Division has continued to assist, as far as possible, in providing a basis of supply of Elite Stock Seed and, during the past three years, has also assisted the Canadian Seed Growers' Association in checking up by means of growing tests; the purity of Elite Stock Seed and Registered Seed propagated by members.

A number of special problems are under investigation, including a study of:—

(a) The effect of environment upon the milling and baking qualities of different wheat varieties.

(b) The effect of different soil conditions and other factors upon the boiling qualities of peas.

(c) The inheritance of various factors and characters which may play a part in the production of superior varieties of cereal grains.

(d) The combining of different classes or varieties of coarse grains with a view to discovering combinations which may yield the maximum amount of digestible protein per acre at the lowest cost.

(e) The effect of various soil and climatic conditions, on the quality of barley for the manufacture of malt.

(f) The classification and description of cereal varieties of different classes.

(g) The adaptability of different wheat varieties to different regions, as a basis upon which to construct a wheat variety map.

DIVISION OF CHEMISTRY

The increasing volume of work with a resultant widening of the scope of the Division of Chemistry is indicative of a growing appreciation of the value of the application of chemistry to farming operations.

Among the more important researches in progress is an investigation of a system of close grazing. Two of the most important variations noted in the results for the third season are (1) still higher percentages of protein from the herbage of the frequently cut plots, especially from that cut fortnightly, and (2) lower yields of dry matter from all the plots. The yields in the early part of the season were heavier even than those obtained in 1928 but drought in August and September retarded growth and reduced the yields. The Divisions of Animal Husbandry and Field Husbandry have inaugurated practical work in the grazing of cattle and sheep by this method, both at Ottawa, Ont., and Fredericton, N.B.

Tests have shown that both roots and leaves of turnips that have been topped several weeks before being pulled, contain decidedly less dry matter than those topped at a later date. The earlier topped roots also have a somewhat lower sugar content.

An examination of further soil samples from farms on the Massawippi River, P.Q., showing injury from mine waste gave further evidence that the injury was caused by excessive soil acidity, the result of the oxidation of iron pyrites present in the mill tailings deposited in the land during flood periods. Heavy applications of ground limestone were suggested towards the reclamation of the affected areas.

Farmers in increasing numbers are submitting soil samples for analysis with a view to obtaining advice in regard to the increasing of soil fertility through the use of fertilizers, lime, etc.

Fertilizer experiments have been inaugurated on the peat areas in the vicinity of Caledonia Springs, in co-operation with the Divisions of Illustration Stations and Field Husbandry. Results from experiments in Eastern Canada indicate that nitrophoska, a new complete fertilizer and nitro chalk, a nitrogenous fertilizer recently put on the market, may be very profitably employed for the majority of farm crops. Fertilizer experiments in Alberta and Saskatchewan have given more or less conflicting results but on the whole indicate that many of the soils of these provinces may be benefited by drilling in a light application of a phosphatic fertilizer for the farm crops.

Experiments are also in progress to determine the influence of the mineral content on the boiling properties of peas.

Other investigations undertaken include the preservation of eggs by carbon dioxide; determination of the best conditions for storing honey so as to prevent fermentation; a study of factors influencing leg bone formation in chicks; a study of iodine in animal nutrition; and, in co-operation with the Health of Animals Branch, an investigation of red water disease in cattle in the Fraser valley of British Columbia.

The work with insecticides and fungicides is featured by close co-operation with the Entomological Branch. Laboratory experiments at Annapolis Royal, N.S., towards a more effective spray mixture were encouraging but owing to the lateness of the season field experiments had to be deferred until the following season.

As in previous years a considerable number of samples were received for examination under the regulations of the Meat and Canned Foods Act.

A special investigation into the composition of various jams was undertaken with a view to the revision of the standards for jams and preserved fruits.

EXTENSION AND PUBLICITY

Agricultural educational exhibits, for which the demand during the past year was greater than ever, were sent out from the Central Experimental Farm to over forty of the principal agricultural, poultry and other fairs in the Dominion. Special exhibits were prepared for the Canadian National Exhibi-

tion, Toronto; Royal Winter Fair, Toronto; Central Canada Exhibition, Ottawa; Maritime Winter Fair, Amherst, N.S.; and the larger exhibitions in the West, such as Brandon, Calgary, Edmonton, Saskatoon and Regina. Educational and livestock exhibits were sent out from the branch Farms to forty-six exhibitions, and the staffs of the Farms assisted in judging at sixty-seven exhibitions and fairs.

The lantern slide sets prepared by this Division are widely used. Many educational institutions send in regularly, year after year, for different sets for use in teaching their classes in agriculture. A new set has been prepared, together with an explanatory manuscript, on the work of the Field Husbandry Division, and the set on "Profitable Poultry Keeping" has been brought up to date.

"Seasonable Hints" are now published quarterly to correspond with the seasons of the year—spring, summer, fall and winter. The fact that it is necessary to print nearly half a million copies of each issue bears testimony to the widespread popularity of this publication.

Press articles, specially written for farmers and sent out by this Division to the press during the past year, were given very wide circulation. They serve as an excellent means of getting seasonal and special information to a larger number of farmers in a very short time.

Seventy-four publications were edited and prepared for printing during the first ten months of the fiscal year. These included Divisional and Branch Farm reports, bulletins, circulars and pamphlets.

Sets of cereals, grains, grasses and fibre material, as well as an exceptionally large number of collections of photographs illustrating the work of the various Divisions of the Experimental Farms were prepared and sent out to educational institutions and organizations. Lecture charts, legends and publicity signs, etc., were also prepared and distributed.

In the multigraph room several hundred thousand copies of forms, circulars, reports and press articles were printed, and ninety thousand envelopes addressed.

ECONOMIC FIBRE PRODUCTION

At the Experimental Station at Kentville, N.S., where a small fibre mill has been installed, large plots of flax and hemp are grown, retted and scutched, with the object of demonstrating every process in the preparation of flax and hemp for marketing, and to determine what profit may be obtained by producing these fibre crops in the Maritimes. As a result of this work, groups of farmers at Lunenburg, N.S., and Goshen, N.S., have decided to undertake the production of flax, the Fibre Division supervising the growing of the crops until the farmers are able to carry on this work themselves. Small plots of flax and hemp are also grown each year at the Experimental Stations at Fredericton, N.B., and Nappan, N.S.

Flax work at the Experimental Station at Ste. Anne de la Pocatière, P.Q., includes variety tests, and tests of rates, dates and methods of seeding as well as the application of commercial fertilizers. Last year some 400 farmers had their flax scutched in the mill at this Station, which was installed chiefly with the idea of encouraging the homespun linen industry.

Flax and hemp are also grown each year at the Lennoxville and La Ferme Experimental Stations. The former district appears to be well adapted to the growing of hemp.

The Division is also supervising the work at three commercial flax mills located at Ste. Fidèle, Beauceville and De Beaujeu, P.Q. At this latter point, a co-operative society of farmers has erected an up-to-date mill, and have grown approximately 800 acres of flax this year.

Considerable experimental work, covering practically every phase of the production and handling of fibre crops, is in progress at the Central Experimental Farm, Ottawa. Here there is a well equipped mill where the flax and hemp grown at Ottawa and on some of the branch Farms is retted and scutched. Flax and hemp are also grown each year at the Experimental Station at Kapuskasing, Ontario, to gain information on the yields and quality of fibre obtainable in this northern part of Ontario.

Until recently it was necessary to import all our hemp seed from Kentucky, but tests conducted at the Experimental Station at Harrow, Ont., indicate that this district is quite capable of producing hemp seed equal to that obtained from Kentucky. Efforts are now being directed towards the production of more suitable varieties by selection and breeding and to reducing the costs of production.

The Division is also co-operating with the Ontario Agricultural College which has recently undertaken a series of experiments with fibre crops.

J.W.S. flax seed grown for export to Northern Ireland is cleaned and graded at the plant established at Bright, Ont., in 1927. Every sack containing J.W.S. seed, conforming to the standard prescribed for No. 1 grade, is sealed and marked in red letters—"Grown and graded under the supervision of the Department of Agriculture," thus affording a valuable safeguard to the Irish buyers as regards purity, quality and weight of seed.

Experiments in the production of flax and hemp for fibre are being carried on at a number of the Prairie Experimental Farms and at Agassiz, but the great problem on the prairies is to obtain sufficient moisture in the fall of the year to ret the straw. The Division is attempting to solve this problem by snow or winter retting.

A very promising flax and hemp scutching machine has been developed by the Fabricord Incorporated of New York. A three day demonstration showed that this machine not only cleans green flax straw exceptionally well, but handles the different grades of straw without any mechanical change. While the trials have not been extensive enough to warrant any definite pronouncement as to its real value, it certainly appears to possess considerable merit.

DIVISION OF FIELD HUSBANDRY

This Division is conducting an extensive series of experiments in an effort to learn the best rotations of crops and the best methods of cultivation for various soil and climatic conditions. Different methods of seeding and harvesting are also being studied to discover what methods give the best results. Other experiments are designed to learn the best methods of employing farm manure and commercial fertilizers. Considerable work has also been done in regard to the problems of drainage, soil moisture, pasture renovation, silage crops, and weed eradication. Trials are also made with new types of farm machinery.

Cost of production studies have been in progress for many years, not merely with the object of learning the definite cost per acre to handle the various farm crops but also to indicate which crops are the most profitable and which crops utilize labour throughout the season most satisfactorily. By keeping an accurate record of the yields of crops from the various fields, the cost of producing these crops and the revenue received, it is possible to learn more definitely what rotations should be followed to give the best results.

Records show that on six Experimental Farms from 1922 to 1926 it cost an average of \$8.10 per ton to produce a hay crop averaging 2.64 tons per acre with but one cut of hay per season. On the Central Experimental Farm at Ottawa, where alfalfa is included with the regular hay mixture and where two cuts of hay per year are secured, the cost has averaged \$6.63 per ton.

Corn silage has given an average yield of 13.5 tons per acre on seven Experimental Farms at a cost of \$3.46 per ton, as compared with an average yield of 17.14 tons at an average cost of \$3.14 per ton at the Central Experimental Farm, Ottawa. A reduction in this cost may be made by the use of the Ronning ensilage harvester, a machine which takes the place of the corn binder and ensilage cutter. Depending upon the acreage and yield of the crop, this machine will effect a saving of from 10 to 20 per cent in the ensilage costs as compared with the usual corn binder and silage cutter method.

In view of the fact that most of the items incurred in the cost of producing crops are the same whether the crop is large or small it is apparent that one of the best methods of reducing the cost of producing crops is to increase yields, and this can best be accomplished by the adoption of the better farming practices. Another means towards this end is the use of larger and better machinery and labour-saving equipment where the farm is large enough to warrant the purchase of such machinery. By keeping cost of production records a farmer is enabled to determine which crops are the most profitable.

Valuable data have been acquired over a period of many years on the cost of producing grain in the Prairie Provinces, on summer-fallow land and on land that has grown one or more crops of grain. These costs have been calculated with four-horse outfits and with the binder and ordinary thresher method of harvesting.

As indicating the enormous development in the use of power machinery in the Prairie Provinces it may be of interest to state that in 1929 there were reported to be over 85,000 tractors in use. The use of these, the introduction of wide tillage and seeding implements, the use of larger horse outfits and of combines have all materially reduced the hours of manual labour required to produce grain. Incidentally the combine was first introduced and experimented with on the Dominion Experimental Station at Swift Current, Sask., in 1922. There are now 7,726 of these machines in use in the three Prairie Provinces. With these newer methods of crop production the man labour required may be reduced to one-third of the requirements under the older methods.

The use of the combine alone, as compared to the binder-thresher method, has not only effected a saving of nine cents per bushel on a twenty-bushel crop, but has also enabled one man to handle a very much larger acreage than was formerly possible.

A bulletin on the "Cost of Producing Crops in Eastern Canada" has already been published by the Division of Field Husbandry, and a similar bulletin is now in course of preparation, dealing with the cost of producing crops in the Prairie Provinces.

DIVISION OF FORAGE PLANTS

The additional area of land placed at the disposal of this Division in 1928 has made it possible to plant out large plots of breeding material. A large increased block devoted to a strain of red clover developed at the Central Experimental Farm produced a fair crop of seed, in spite of the dry mid-summer conditions.

A large number of intercrosses, purified varieties and inbred strains of corn were planted in comparative test plots with the parent types and with commercial varieties. In some cases the intercrossed material gave not only a profitable increase in yield but also matured in a shorter time.

Several inbred strains of sunflowers continue to give promise of outyielding the best commercial lots.

With a view to testing the pasture value of the most promising grasses and legumes available to Canadian farmers, a comprehensive series of plots was planted out in 1929. The various types of pasture plants were seeded alone and

in combination. Seed was also obtained of the best pasture types being developed by the outstanding forage crop breeding institutions in Great Britain and the Scandinavian countries. These importations will be planted out in 1930 to test their suitability to Canadian conditions.

Turf grass investigations were continued and new material acquired which is reported to have particular value for the production of a satisfactory turf.

At the Experimental Station at Harrow, Ont., the best individual strains of corn are being further selected and recombined.

In an experiment designed to study the effect of delayed planting on the ravages of the corn borer, the results of the last three years show that larger yields of marketable ears of corn were secured by planting later-maturing varieties at the normal time than by the delayed planting of earlier-maturing sorts. In fact, during 1929 a considerable proportion of the corn which had been delayed in planting failed to mature previous to receiving frost injury in the fall.

Tests have shown that broom corn can be successfully grown in the southwestern peninsula of Ontario but, owing to the high price of land, it is questionable if the crop can be produced profitably.

Substantial progress has been made in the range improvement investigations at Manyberries, Alta. This work includes (1) a study of the native vegetation; (2) a study of the effects of the different grazing practices on the vegetative cover; (3) the improvement of range pastures by reseeding, surface cultivation, the application of fertilizers and other artificial means; (4) the growing of cultivated forage crops. Further collections and chemical analyses have been made to determine the relative value of the different species of forage crops on the range. Provision has also been made for a water supply to irrigate the land for the purpose of growing types of forage crops unsuitable to the dry land conditions. Windbreaks have also been established.

Surveys were also made of range lands in outlying areas, including Buffalo Park, Wainwright, Alta.; the Antelope Park, near Etzikom, Alta.; the Forest Reserve, near Coleman, Alta.; and part of a large range area north of Ashcroft, B.C. In conjunction with these definite surveys, experiments are in progress with the co-operation of ranchers in representative areas to determine the possibility of profitable production of forage crops.

DIVISION OF HORTICULTURE

Facilities for work in the Division of Horticulture have been greatly improved by the erection of a new office and laboratory building, with a commodious cellar for the storage of fruits.

Nutritional studies were continued during the past year with trees in pots, by which means more exact methods can be followed than in the orchard. Experiments which have been conducted in commercial orchards, at Abbotsford and Chateauguay, P.Q., have shown the value of the sod mulch method. Trees subjected to this treatment have made a striking improvement annually, both in appearance and yields, compared with those not mulched.

Fertilizer experiments in these same orchards have shown that while nitrogenous fertilizers will produce beneficial results in many cases, it is necessary to use a complete fertilizer if good results are to be obtained year after year. The variety "Wealthy," which as a rule is a biennial bearer, has, since the use of complete fertilizer, become an annual bearer in the orchard under experiment.

The results of experiments have shown that, in order to obtain maximum crops of fruit, it is necessary to use varieties which will successfully pollinate one another. While work in pollination has been done in Ottawa for some years, a study of this problem was begun in 1929, at Abbotsford, P.Q., when some 8,000 apple flowers were pollinated. The value of some of the new varieties of apples

originated in the Division of Horticulture, such as Melba and Lobo, for pollinating McIntosh, which is usually sterile to its own pollen, was brought out in this first year's work.

In the breeding work, the Division is aiming to produce highly coloured apples of the best quality for all seasons of the year, for which there is now a demand. A few of the most outstanding varieties are Melba, Joyce, Lobo, Hume and Sandow. Breeding work is also in progress with pears, plums, cherries, raspberries, gooseberries, strawberries and blueberries.

Variety tests of vegetables have been carried on for the past forty-one years and novelties are compared from year to year with established best varieties. Few novelties from other countries compare favourable with the new ones bred in the Division of Horticulture. The Alacrity and Herald tomatoes, Banting and Pickaninny corn, and Ruby rhubarb have all given a good account of themselves over a very wide territory.

An early good-sized egg plant, which promises to be of great value to Canadians, has been produced by crossing a Japanese egg plant called "Nagasaki" with the Black Beauty. Selections were made in 1929 with a view to getting various types fixed.

The selection of foundation and elite stock seed of certain vegetables, according to the rules of the Canadian Seed Growers' Association, was continued in 1929, as also was the testing of varieties of vegetables for purity and trueness to name, this latter work being carried out in co-operation with the Seed Branch.

A comprehensive project, designed to learn the value of paper for mulching crops, was conducted on the Central Experimental Farm and at ten of the branch Farms. The results of this experiment show that most vegetable crops are improved by the use of the paper, especially the heat-loving plants, such as melons, cucumbers and tomatoes, but the cost of the paper is high and its economical use is very doubtful in most cases. Further experiments will be conducted in 1930.

There is ample evidence of a considerable and ever-increasing interest in ornamental gardening. A new race of lilacs called *Syringa Prestoniae*, the result of a cross between *Syringa villosa* and *Syringa reflexa*, have aroused particular interest. They are later in blooming than the varieties of common lilac, with splendid shades of colouring, though not sweet scented like the common lilacs. The work with lilies has attracted so much attention that Miss Isabella Preston, Specialist in Ornamental Horticulture, has, at the request of one of the large publishing houses, written a book entitled "Garden Lilies."

Many fine new varieties of hybrid roses, irises, columbine and ornamental crabapples have been produced.

During the year bulletin No. 113, New Series, "Herbaceous Perennials" was published, and has proved very popular. In the greenhouse, comparisons were made of the yield of cut flowers and quality of bloom of the standard varieties and novelties of sweet peas, antirrhinums and carnations. Varieties of schizanthus, cyclamen and geranium were also tested. Promising varieties of chrysanthemums, originated in the Horticultural Division and named during the past year, are Barbara Mackay, Mrs. R. A. Kingman, and Ella Sutherland.

A fine strain of greenhouse cucumber, a cross between Hescrow and Deltus, has been developed and seeds have been sent to growers, who have reported very favourably upon it. A very fine type of tomato has also been developed and work is in progress towards the development of a head lettuce of good size, which will not be affected with tip burn. Breeding work with apples, pears, plums, cherries, gooseberries, blueberries, raspberries and blackberries was continued.

DIVISION OF ILLUSTRATION STATIONS

The thirty-three new Illustration Stations established during the past year bring the total number in operation to 193. This increase in number was accompanied by an expansion in the program of demonstration work carried out in the different provinces. Through the medium of these Illustration Stations, many farmers have been induced to adopt the principal of crop rotations, and the use of pure clean seed, thorough seed bed preparation, the use of suitable varieties, systematic improvement of the dairy herd, including the use of proven sires and the keeping of individual milk records.

The value of crop rotations and proper cultural practices as factors in the economic control of weeds in grain farming areas has been well demonstrated on the Illustration Stations in Manitoba.

Demonstration work with chemical fertilizers has been carried on in every province. In Manitoba, Saskatchewan and Alberta special attention has been given to a study of the value of phosphatic fertilizer in grain farming practices. In the eastern provinces and British Columbia, the effects and value of fertilizers for permanent pastures, as well as all classes of cultivated crops, was studied and demonstrated. On the Illustration Station at Duncan, Vancouver Island, B.C., superphosphate was applied to old pasture land at the rate of 500 pounds per acre. The plots were replicated five times with five untreated plots as check. This application not only increased the yield to more than three times that obtained on the untreated check plots but also improved the general quality of the hay, due to the large proportion of clover in the mixture.

At Radville, Sask., a comprehensive series of experiments is in progress towards the improvement of "burn-out" lands. A preliminary report on this work has been prepared and will shortly be issued in pamphlet form.

The sale of surplus seed by the Illustration Station operators during the past year, amounted to 42,387 bushels of seed grain, 10,739 bushels of seed potatoes and 18,790 pounds of grass and clover seed, showing an increase over former years. This multiplication and distribution to neighbouring farmers of suitable varieties of seed is but one of the many important services being rendered by these Stations in their respective communities.

Another important line of work undertaken on these Stations is that of live stock and poultry improvement. While high producing, accredited, pure-bred herds of cattle are maintained on a large percentage of the older established Stations where dairy farming is being practised, on some of the newer ones this improvement work is only in the preliminary stages. However, in many cases the results of the first two years, as indicated by the individual milk records, are such as to convince the operator of the advisability of eliminating the low producers and of adopting a vigorous policy of improvement through the use of proven sires and greater attention to feeding. Neighbouring farmers are able to procure well-bred animals for breeding purposes from many of the Illustration Stations. Such sales during the past year included 282 head of cattle, 274 hogs and 165 sheep. Equally good work has been done with poultry, and 1,526 settings of eggs, 673 cockerels, and 818 pullets were sold by the various operators during the year.

The supervisors organized and held 115 field and public meetings, acted as judges at twenty-seven exhibitions and assisted with the program at ten short courses.

POULTRY DIVISION

The year 1929 was one of steady progress in the poultry industry in Canada. A finer type of poultry accommodation and equipment is being used on the more specialized farms and the demand for day-old chicks and six- to ten-week pullets is well in advance of the supply. Egg prices were low during the early part of the year but recovered in the spring and from June on held

slightly higher than during the previous year. There was an excellent market for storage eggs during the fall. Prices for dressed fowl, while high during the first part of the year were depressed considerably during the holiday season.

As President of the World's Poultry Science Association, The Dominion Poultry Husbandman was called upon during the past year to visit a number of countries in Europe, Africa, Asia, and Asia Minor, in the interests of the World's Poultry Congress which is to be held in England in July, 1930. Considerable preparation has already been made towards Canada's participation in this event. This country's contribution will include a national exhibit dealing with poultry work in Canada, also a live bird exhibit of 1,000 birds, a display from each of the provinces, exhibits from various commercial firms as well as from the Canadian Pacific and Canadian National Railways and the Federal Department of Agriculture.

Excellent progress has been made in the experimental work being conducted in the Poultry Division. This covers all phases of poultry work such as incubation, brooding, rearing, culling, feeding, egg production, breeding and housing. The results of these experiments when completed are conveyed to the farmers and poultrymen through Divisional Reports, press articles, exhibits and lectures. As superior methods of control are inaugurated the problem of disease becomes a factor of less importance in experimental work and as a consequence more reliable results are obtained. Wherever possible large numbers of birds are used in order to reduce the factor of experimental error to a minimum. Moreover, many of the experimental projects are being conducted, not only at the Central Experimental Farm, Ottawa, but also on the various branch Farms throughout the Dominion, thus enhancing the value of the results obtained. On the Central Experimental Farm, not only egg production, but also the size of egg shows marked improvement due largely to years of careful selection and to some extent to the fact that new land has been made available for the rearing of the stock. The increasing emphasis that is being placed on the size of egg of the dam of the male rather than on mere numbers of eggs, must in a few years react favourably to the improvement of Canadian eggs.

Thirteen egg laying contests were conducted by this Division in 1929, including the Canadian Contest at Ottawa and one or more Contests in each of the provinces. The average production of the 5,256 birds in trapnests in these contests in 1929 was 176.5 eggs per bird. This is an increase of 54 eggs per bird since the contests were established in Canada 10 years ago.

There was a large increase in the number of females registered in 1929 over the previous year due to the increased size of egg, there being fewer birds disqualified for laying eggs under 24 ounces per dozen.

That poultry breeders are realizing more and more the value of pedigree in poultry breeding work is evidenced by the ever increasing demand for registered birds, especially cockerels. During the year 16,500 chicks were banded from registered hens, which is slightly over ten chicks per hen.

The bulk of the work from this Division in the province of Quebec is in connection with registration and contests. French correspondence is very heavy and lectures and demonstrations have been given throughout the province.

Poultry exhibits, killing and plucking demonstrations and lectures were given at all the important fairs throughout Eastern Canada.

As more highly trained men are becoming available the poultry work on the branch Farms is steadily increasing in scope and excellence.

Poultry disease work is carried on in co-operation with the Health of Animals Branch. A large number of autopsies were made during the past year indicating the high incidence of intestinal parasitism, with pullorum disease ranking next in order, followed by diseases incident to egg production. A large number of the branch Farms are being brought into the pullorum elimination

program. A comparison was obtained between Single Comb White Leghorns and Barred Plymouth Rocks in the matter of mortality and also a definite correlation between mortality and egg production.

TOBACCO DIVISION

As a result of extreme drought during July and August, the yields per acre of Bright, Burley and Dark tobaccos, in western Ontario, were reduced by twenty-five, ten and nine per cent, respectively, as compared with the yields obtained in 1929. The "per acre" yields obtained in British Columbia were down to only forty per cent, as compared with 1928, but the cigar types which were grown in Quebec under more favourable seasonal conditions gave yields per acre at least ten per cent in excess of those obtained in 1928.

During the past year, the experimental work with tobacco has been considerably revised and expanded, not only on the Central Experimental Farm but also on the various branch Farms and Stations where tobacco work is carried on. Special attention has been given to fertilizer trials, which have been built around a basal formula, and the check plots so arranged that direct comparisons can be made to overcome field variations.

The development of a system of evaluating quality in tobacco represents probably the most advanced step in the tobacco investigations. A "grade index" has been devised and quality records so arranged that information on specific qualities, such as colour, body, etc., of such types as Bright, Burley, Dark, and cigar binders, is directly obtainable.

Variety tests were continued and pure seed of acceptable varieties was grown at the various Farms and Stations, for distribution to growers. During February and early March, a number of meetings were held at various points throughout the tobacco section of western Ontario. At these meetings, grading demonstrations were given and cultural problems, fertilizers and varieties were discussed. A closer system of co-operation has been established between the federal and provincial Departments of Agriculture, whereby reliable information is given to the grower.

The scoring system, as applied to Ontario tobaccos, was revised with the object of emphasizing, to the growers, deficiencies in Canadian tobacco and also those characteristics which are most desirable, in keeping with the latest trends of manufacture. In Canada and abroad.

The Division has continued to assist in educating the public in regard to domestic tobacco production, and some progress has been made through the medium of exhibits, notably at the Central Canada Exhibition, Ottawa, and in co-operation with other agencies at the Canadian National Exhibition, Toronto. An exhibit was also furnished to the Department of Immigration and Colonization, for use in Kentucky.

With the object of bringing Canada's position as a tobacco producing country prominently to the attention of the British public, the Tobacco Division prepared a most comprehensive display, augmented by commercial samples from various producers and packers. In co-operation with the Canadian Government Exhibition Commission, this display was exhibited at the British Industries Fair, the Ideal Homes Exhibition, in London, England, and subsequently, at many of the smaller exhibitions throughout the British Isles.

Following the British Industries Fair, in February, 1929, a comprehensive survey was made of the possibilities for marketing Canadian leaf in the United Kingdom. The opinions of various members of the trade as to the relative merits of the Canadian product, generally speaking, were favourable, the chief criticisms being that much of the Canadian leaf has been poorly graded, is too high in moisture content and very dirty. Favourable reports have been received as to the quality of new belt flue cured, the main criticism

being lack of maturity. High quality, both in the leaf and pack, are essential. In general, it may be said that the Old Country market continues to be the most promising export outlet for Canadian leaf, but secondary markets for low grade leaf are being developed, notably in Belgium and, to some extent, Germany and the Netherlands.

BRANCH FARMS AND STATIONS

EXPERIMENTAL STATION, CHARLOTTETOWN, P.E.I.

Germination and growth were rapid and the crops matured quickly. Hay and cereals were above the average in quality, and the growth of roots and late potatoes was aided by heavy autumn rains. There was no frost between May 20 and October 28, a period of 161 days.

Five cows and one heifer in the Ayrshire herd qualified in the Record of Performance test. Results obtained in steer feeding tests indicate that there is very little difference in the feeding value of swedes and cull potatoes and that both will produce satisfactory gains when fed in reasonable quantities. Twenty-four steers fed for 107 days, returned a profit of \$438.72 over the original cost of the steers and their feed. Breeding stock from the herd of Yorkshire swine was sold locally and to breeders in the Magdalen Islands.

The cost of producing oats has been lowest on a five-year rotation where the oats followed a hoed crop. Potatoes, wheat, clover and timothy hay were produced at the least cost on a four-year rotation.

Variety tests of corn, roots and sunflowers were continued, the results being calculated on a dry matter basis.

In the cereal variety tests, Huron and Early Red Fife wheats, Banner, Victory, and Alaska oats and Charlottetown No. 80 barley have been found the most satisfactory for conditions on Prince Edward Island. Breeding work with cereals is also in progress.

Experiments with soils and fertilizers have aroused considerable interest as evidenced by the ever-increasing number of inquiries from farmers.

Apples, plums and cherries gave excellent yields, but strawberries and raspberries were badly injured by the weevil.

Egg production in the poultry plant was very good indeed, a Barred Rock hen, No. M-172, topping this list with 314 eggs. Eighty-one birds qualified in the eleventh Egg Laying Contest and were registered.

The average production of honey per over-wintered colony was 92 pounds. Experimental work was continued and 26 queens were reared.

There has been a noticeable improvement in the livestock and poultry and in the quality of the crops produced on the Illustration Stations.

Exhibits were shown at the Provincial Exhibition and at Georgetown and the Station staff judged at a number of exhibitions and school fairs, as well as giving a mid-winter series of lectures throughout the province.

EXPERIMENTAL FOX RANCH, SUMMERSIDE, P.E.I.

A study of factors controlling reproduction in female foxes has shown very definitely that, in order to obtain favourable breeding results, it is absolutely necessary that females make a pronounced gain in weight during the fall months, the lower limit apparently being about 30 per cent and the optimum gain between 50 and 60 per cent. The amount of food at this time of the year should be between five and ten per cent above the maintenance ration, but even though this larger quantity of food is fed to the foxes a satisfactory gain in weight will not result unless the rations contain a wide assortment of vitamins. In order to obtain favourable breeding results, breeders should take

special precautions with the diet during the summer and fall months and not rely upon the rations fed during the breeding season.

A great deal of evidence has been obtained concerning the inheritance of the silver colouring in foxes. From the results as a whole, it would appear that pale and extra pale foxes should be inbred as closely as feasible, while dark foxes should be bred distantly related.

Experiments in the feeding of high meat rations for successive generations have shown that, if continued for several years, this practice destroys the breeding qualities of the animals. In the second generation, the results have been most disastrous with practically an entire failure in production.

Some interesting experiments have been carried out to determine the rate of digestion of certain foods, the results indicating that when two meals per day are fed it is advisable to feed the meat meal in the morning and to feed whatever cereals may be given to the foxes at the evening meal.

Ten pens with board floors, each measuring 8 by 16 feet, were constructed during the year, for use in connection with the study of the control of parasitic infestation. Over eighty pups were raised on these board floors, the pups being placed in these pens at three weeks of age along with their mothers, and the mothers removed when the pups were seven weeks old. There was no evidence of the typical lung worm infestation amongst these pups so long as they remained on the board floors, although it was known that some of the mothers from which they were produced were infested with lung worms while they were on the board floors with them. With adult foxes with mild infestations of lung worms there was an immediate improvement in the condition after placing them on the board floors. In chronic cases the favourable results were not so pronounced.

In the control of the infestation of bladder worm also, the placing of the foxes on board floors during the summer and fall months has given the best results.

EXPERIMENTAL STATION, KENTVILLE, N.S.

Seeding was started early in May, but rains towards the end of the month delayed the work and on wet lands crops were seeded late. Precipitation between June 1 and September 14 was much below the average for the previous fourteen years.

The herd of dual-purpose Shorthorn cattle at this Station has continued to make steady progress and a number of promising heifers, sired by the bull "Comet 3rd," are being raised. Three Yorkshire sows are entered under the policy of Advanced Registry for swine.

Prospects for a large crop of good clean apples appeared to be very good at the beginning of the season. The bloom had been heavy and the set good. Apparently, however, during the first days of June some of the foliage not fully protected by a fungicide became infected, and with the heavy rains after September 14 the apples became infected from the foliage. The result was a pinhead development of apple scab in storage which, in many cases, caused considerable loss. There was also much undersized fruit, particularly of the varieties Duchess, Wealthy, McIntosh, and Baldwin. There was considerable box-packing of such varieties as Cox Orange, Gravenstein, Ribston, McIntosh, Wagener, Russet, and Spy. Since this method of handling these apples appears likely to prove profitable, the box pack will be used more extensively at the Station another year.

An orchard fertilizer consisting of 200 pounds each of nitrate of soda, sulphate of ammonia and superphosphate, and 100 pounds of muriate of potash, mixed together and applied at the rate of 450 to 600 pounds per acre, according to the growth of the trees, has been found satisfactory.

Clapps' Favourite and Bartlett pears have proven to be the most suitable varieties for the Annapolis valley. The cherry and gooseberry crops were good, plums average, raspberries fair, and other bush fruits light. Strawberries were much below the average, both in yield and quality.

A considerable number of varieties of annual and perennial flowers and ornamental shrubs are under test and data have been secured as to the value of many of these.

Cultural and variety tests of vegetables also were continued, and tomatoes did particularly well. On plots where paper mulch was used, increased yields of cucumbers, egg plants, peppers, and tomatoes were obtained.

Forage crops did well early in the season, but, with the dry summer, the yields of corn and mangels were about 25 per cent and turnips about 20 per cent below average.

In the rod-row tests of cereals the results this year confirmed those of previous years, indicating the superiority of Victory oats, Charlottetown No. 80 barley, and Huron wheat, for this district.

Reliable data on the cost of producing the principal field crops have been accumulated over a period of eight years.

Some very valuable experimental work is being done with different nitrogen-phosphorus and potash-carrying fertilizers in order to determine their relative values, and the optimum rates of application.

The past year was a very satisfactory one in the poultry plant, the average pullet year production of the breeding stock being 205 eggs, as compared with 195 in 1928. A high-grade fish meal fed at the rate of 10 to 15 per cent of the laying mash gave better results than beef meal. Thirty birds in the Nova Scotia Southern Egg Laying Contest qualified for registration.

Bees kept at this Station are used principally in connection with the orchard pollination investigational work.

EXPERIMENTAL STATION, NAPPAN, N.S.

The grass fields came through the winter without any severe injury and the clover and hay crop harvested was about average for this district. The worst feature of the past season was the lack of sufficient moisture during June, July, and August, from which all crops suffered more or less.

Guernseys and Jerseys are the two dairy breeds of cattle represented at this Farm. The foundation herd of Jerseys was purchased two years ago and includes five promising daughters of "Palatine's Observer." Feeding experiments are conducted with both herds, and they also form a medium through which farmers may obtain good foundation breeding stock. There is also an excellent flock of pure-bred Shropshire sheep and a herd of pure-bred Yorkshire swine. In connection with the latter, data are being compiled each year on the cost of production.

Splendid progress has been made in the cereal work at this Farm, the different varieties and strains being tested under the rod-row system.

The field husbandry work includes not only rotation and cultural experiments, but also studies in the cost of producing various farm crops.

Forage crops, being of such vital interest to the farmers of Eastern Canada, received special attention, many different varieties and strains being under test. More than 700 pounds of club root resistant swede seed produced on this Farm in 1929 will be offered for sale to farmers. Marshland improvement work has been in progress during the past four or five years and will be continued.

Particular attention has been given to the selection and production of disease-free stock of Irish Cobbler potatoes by the unit stock selection method, in order to assist growers to obtain a good start with disease-free stock.

Satisfactory progress has been made during the past year in the pedigree breeding work with Barred Rock poultry, with particular attention to the improvement of egg size. Interest in the Egg Laying Contest has been quite keen, particularly on the part of New Brunswick breeders.

The past year was a poor one from a beekeeping standpoint but, even so, the results obtained indicate that a small well-managed apiary on each farm would provide the farmers with a source of revenue which is otherwise lost.

EXPERIMENTAL STATION, FREDERICTON, N.B.

The spring was wet and cold and seeding was not general until the last week in May. Hay and pasture lands benefited greatly from the rainfall in May. Dry weather in July, August and September prevented the spread of potato blight, but decreased the yields of grain and roots. It also dried up the pastures.

Breeding and feeding experiments were carried on with herds of pure-bred Ayrshire and Holstein cattle. Results from an experiment to determine the merits of close-grazing, alternating pastures, and heavy application of nitrogenous fertilizer, indicate that it is possible to maintain the milk flow during the summer months without any supplementary feeding. Iodine fed to pregnant ewes appears to have little, if any, value in this district, judging from the results of tests over a period of three years. Breeding as well as feeding experiments were carried out with a herd of pure-bred Yorkshire swine.

Some very interesting and valuable fertilizer experiments are in progress including one designed to determine the relative merits of different formulae, applied at three different rates per acre, for the potato crop in a three year rotation. Another is to determine the effect on the quality of fruit from nitrate of soda applied at different rates in an apple orchard. The experiments on rationally grazed and fertilized pastures have been modified and extended.

In addition to the usual variety tests of forage crops some corn breeding work is carried on. A number of inbred strains of Twitchell's Pride, which were intercrossed in 1928, are very promising. Inbred strains of Twitchell's Pride have also been crossed with Wisconsin No. 7 with excellent results. Of the alfalfas tested, the variety Medicago Falcata was the hardiest, but Grimm's gave the highest yield and appears to be the best variety for this district.

The following cereal varieties are apparently best adapted to this district: Oats—Victory, Banner, Gold Rain; Wheat—Huron and White Russian; Barley—Charlottetown No. 80 and O.A.C. 21; Beans—Soldier; Peas—Canadian Beauty, Prussian Blue and Chancellor.

Four, five and six year crop rotations are being studied to determine their relative merits, and experiments are in progress to determine the best rates and dates of seeding oats and rates of seeding wheat.

Potato work is confined largely to the production of disease free stock. Breeding work is being carried on with apples in an endeavour to produce a high class winter variety suitable for New Brunswick conditions. Pollination studies with the apple have also been undertaken at the suggestion of the New Brunswick Fruit Growers Association. A comparison was made of clean cultivation versus paper mulching for the production of vegetables. While many of the 18 different kinds of vegetables used in this experiment responded favourably to the use of paper, in most cases the increased yield was not sufficient to offset the cost of the material and the labour involved in the time of planting.

A number of feeding experiments are under way in the poultry plant. In the breeding work efforts are directed not only towards increased egg production but also to increased egg size. In the ninth New Brunswick Egg Laying Contest, seventy-four birds qualified for registration.

EXPERIMENTAL STATION, STE. ANNE DE LA POCATIÈRE, QUE.

The first seeding on well drained land was done on May 10. Weather conditions during June and July favoured the hay crop, and also benefited cereals on well drained land, but on land that was poorly drained the heavy precipitation in July tended to reduce yields. Potatoes and roots yielded above the average, but corn and fruits were poor crops.

A breeding stud of Percheron horses is maintained at this Station, and is headed by the imported stallion "Chacal" whose services are available to breeders at a nominal fee.

There is also an excellent herd of Ayrshire cattle with which breeding and feeding experiments are conducted. During the past year twelve cows in this herd completed official records with an average production of 9,752 pounds of milk testing 4.2 per cent butter-fat. Many herds in the district are now headed by bulls from this herd, the farmers evidently appreciating the value of a real good sire.

Breeding and feeding experiments are also carried on with Leicester sheep and Yorkshire swine. Several of the sows are entered under the scheme of Advanced Registry for Swine.

Three, four and five year crop rotations are under test and a comparison is being made to determine the relative merits of artificially drained versus surface drained land. Many cultural experiments are also in progress, as well as a series of pasture experiments.

The usual variety tests of cereals and forage crops were continued and quantities of Elite Stock seed of the most desirable varieties of cereals for the district were produced.

There was comparatively little winter injury in the orchard, but seasonal conditions were such that it was not possible to effectively control the scab infection and, as a consequence, the quality of the apple crop was impaired. Spraying, fertilizer, thinning and cultural tests were continued. Variety and cultural tests were also carried out with vegetables, strawberries and raspberries.

Tests of fertilizers used singly and in combination, for roots, grain, clover and timothy are also in progress.

The experimental work with flax has attracted considerable attention and there is no doubt whatever that the establishment of a flax mill at this Station has been very largely instrumental in reviving the home-spun linen industry in the district.

Careful breeding, selection and feeding have resulted in a marked improvement in production in the poultry plant. The average production of the fifteen best pullets was 258.5 eggs in 1929 as compared with 123.6 in 1923. In the Egg Laying Contest sixty-nine birds qualified for registration.

Some very interesting and valuable experimental work is in progress in the apiary. Honey production averaged 87 pounds per colony, one colony producing 219 pounds.

EXPERIMENTAL STATION, CAP ROUGE, QUE.

The growing season of 1929 was slightly cooler with a little more precipitation and less sunshine than the average for the past seventeen years. There was a frost free period of 121 days. With the exception of barley, garden peas and grapes, most crops were good.

Experimental work in the breeding, feeding, housing and management of pure-bred French Canadian horses is carried on at the St. Joachim Horse Farm under the direction of the Superintendent of the Cap Rouge Experimental Station towards the development of a race of good dual-purpose animals of an average weight of 1,200 pounds.

At the Cap Rouge Experimental Station there is a very fine herd of pure-bred French-Canadian cattle which has been accredited since 1922. During the past ten years steady improvement has been made through careful line breeding. Three of the four 1929 champions in the 305 day class are in this herd.

A herd of Yorkshire swine is also maintained and work is in progress under the Advanced Registry policy.

A comparison of swede turnips, corn, sunflowers and peas and oats for ensilage, to determine the cost of a ton of dry matter of each of these crops has shown that roots are far too costly for this district. For a crop of silage corn it has been found that autumn ploughing is advantageous.

The Melba, Lobo and McIntosh apples do well in this district and an application of five pounds of nitrate of soda around each tree has given profitable returns. Of the varieties of strawberries tested the Dunlap has given best results. The heaviest yielding vegetables have not always proved the most profitable. Quality and appearance should receive consideration. As the result of many years of experimental work it is now possible to recommend varieties and strains of ornamental plants, shrubs and trees which are suitable for this district.

Oats continue to be the leading cereal in central Quebec, but there is room for expansion in the production of field peas for which there is a good local demand for domestic consumption. Barley also might be grown more extensively particularly for pork production. Wheat does not appear to be a paying crop.

Calculated on a dry matter basis it has been found that roots are an expensive feed, owing to the large amount of manual labour involved. An interesting comparison is being made of corn, sunflowers, peas and oats for silage. Strains of red clover from southern Europe are not hardy enough for central Quebec.

In the poultry plant efforts are being directed chiefly towards the development of a strain of Barred Plymouth Rocks of the highest standard. Experimental work in progress covers breeding, feeding, housing, and management problems.

EXPERIMENTAL STATION, LENNOXVILLE, P.Q.

The season was very favourable for the hay crop and pastures also were good. Grain and roots were average crops but corn was immature when harvested.

Dual-purpose Shorthorns and Jerseys are the two breeds of cattle kept at this Station. These herds are headed respectively by the outstanding yearling bull "Nevalcam Emperor" 191349, and the imported bull "Brampton Poppy's Observer" (imp.)—45654.

Steer feeding tests conducted during the winter included a comparison of finishing steers in the barn versus finishing on pasture.

Breeding and feeding experiments are also carried on with a flock of registered and grade Oxford Down sheep and a herd of Yorkshire swine. Three sows are entered under the Advanced Registry policy for swine.

Rotation, cultural, and fertilizer experiments were continued, the latter including tests of several of the newer synthetic fertilizers. Plans are also being made for a rather extensive pasture improvement experiment.

Work with forage crops includes variety tests, tests of different grain mixtures, as to their suitability for ensilage, and a study of production from combinations of grass and clover mixtures. From the results of some of these experiments, it is quite apparent that certain other grain mixtures will produce as good and in some cases better and just as economical silage as O.P.V.

In addition to the regular variety tests and breeding work with oats and fall wheat, the staff at this Station co-operates with the Quebec Provincial Seed Board in the systematic testing of the principal varieties of cereals, and with the United States Department of Agriculture in the classification of varieties of oats.

Much valuable information has resulted from the co-operative experiments carried on in commercial orchards. Experiments in the production of hardy apple root stocks are also in progress, as well as variety and cultural tests with vegetables, tree and small fruits, ornamental shrubs and flowers.

Experimental results indicate that the soil and climatic conditions in the Eastern Townships are, as a rule, favourable for the production of hemp for fibre.

The past season was a most favourable one for bees, one colony in the Station apiary producing 255.5 pounds of excellent quality honey. The average production per colony was 122.69 pounds.

Breeding and selection work in the poultry plant is directed towards higher production of eggs of standard weight. Some very interesting cost data have been collected over a period of ten years. In the seventh Quebec Western Egg Laying Contest, fifty-five birds qualified for registration.

EXPERIMENTAL STATION, FARNHAM, P.Q.

From the standpoint of tobacco growing, the season of 1929 may be regarded as an average one. Seeding was somewhat delayed and an outbreak of cutworms reduced the tobacco acreage. Cutting and curing were done under favourable weather conditions.

Of the six varieties of cigar binder tobaccos tested for resistance to black root rot, Connecticut Havana 142 A-3-X proved the most resistant and yielded 1,804 pounds per acre. The most susceptible was Connecticut Havana 38, with a yield of 1,127½ pounds to the acre.

A comparison was made of various fertilizers for the tobacco crop, but unfortunately the tests were of necessity carried out on land which had never received any commercial fertilizer and was in poor condition. Other factors also entered into this work and made the results unreliable.

In a test of six cigar-binder varieties, Connecticut Havana 142 A-3-X, C.H. No. 38, and S.F. Brown Havana Seed ranked in the order named as to both quality and yield.

Plots on which the fertilizer was broadcasted produced larger yields than plots on which it was drilled in. This is contrary to the results obtained last year.

Various manures have been tested for tobacco growing and from the results obtained this year, they rank in the following order, in so far as yield is concerned: sheep manure, hen, cow, horse and hog manure. The latter has always produced leaf of poor quality but with that exception there was very little difference in the quality of leaf.

Long and short rotations are under test and the effect of the various crops on tobacco is being studied.

This year the use of paper mulch in the growing of tobacco resulted in an increased yield of only two pounds per acre, which is not sufficient to justify the additional expense.

Formaldehyde was successfully used for the disinfection of tobacco seed beds and a bait of poisoned bran effectively controlled the cut worms.

Results from experiments in topping and suckering cigar tobacco indicate that early bloom is the best stage for topping, and that two suckerings are sufficient.

Eight varieties of tomatoes were tested for canning purposes. The following gave the best results: John Baer S-4-B, Wayshead McDonald, and Bonny

Best. Unfortunately a frost early in September did considerable damage and consequently net returns per acre were low this year. Several varieties of peas obtained from the Experimental Station at Windermere, B.C., were grown this year and rank in the following order as to yield: Director, No. 6, Bruce, Lincoln, No. 42, and Kootenay.

A survey of the district disclosed only light infestations of wild fire disease which were easily controlled. There was an excellent attendance of tobacco growers at the annual field day at the Station.

EXPERIMENTAL STATION, L'ASSOMPTION, QUE.

Excellent progress has been made in the laying out and general preparation of this Farm for experimental work. Some 45,000 feet of tile drain has been laid and over 8,000 feet of ditch has been deepened and cleaned out. In addition some of the old buildings have been renovated and several new structures erected.

The spring season was favourable for the production of tobacco plants and although planting was a little late, and most of the area was poorly drained, very satisfactory yields of well matured leaves were obtained. However, on account of the uneven soil conditions the experimental results obtained this year should be accepted with caution.

A series of experiments has been inaugurated with the object of determining the relative merits of manure and commercial fertilizers, the best sources of nitrogen, phosphoric acid and potash, and the most economical rate of application.

The results of this year's experiments in the use of paper mulch in the growing of tobacco was not very encouraging. The labour involved in laying the paper by hand increased the cost and there was not a proportionate increase either in the quality or yield of the crop.

Experiments are also being conducted to determine the influence of suckering and topping at different stages of growth, and at different heights, on the yield and quality of tobacco.

Nine varieties of cigar binder tobaccos were tested and although they have not all been examined for quality it seems probable that Connecticut Havana No. 38 will be amongst the best if not the best. The highest yielding variety was a resistant strain 142, C3X. The variety Comstock Spanish had somewhat narrower leaves than the C.H. 38 and the varieties resistant to black root rot.

In addition to organizing a field day at the Station for the tobacco growers of the district, the Superintendent and his Assistant also gave a number of lectures on tobacco growing at St. Jacques and L'Assomption.

EXPERIMENTAL STATION, LA FERME, QUE.

There was rather less sunshine and heavier precipitation in 1929 than the average for the past twelve years. Seeding of cereals was completed during the first days of June; growth was regular and crops ripened splendidly. Wheat and oats gave fair yields but barley was below the average. Ensilage, root and garden crops all did well.

The herd of pure-bred and grade Ayrshire cattle at this Station has been accredited for the past five years. As a result of several generations of grading up the herd has now attained a remarkable degree of uniformity and there has been a substantial improvement in milk production. Unfortunately several of the best producers were eliminated from the herd following the serum test for contagious abortion. Breeding work is also carried on with a flock of registered Cheviot sheep. Under the scheme of Advanced Registry for Swine, work is proceeding towards the production of real bacon type hog.

Three, four, five, and six-year crop rotations are under test and cost of production data are recorded. Tests of various fertilizers, alone and in combination, are in progress, as well as a study to determine the value of green crops ploughed under as a soil fertilizer. Surface drainage work has also received considerable attention.

The area devoted to experimental work with forage crops has been rearranged, rectangular $\frac{1}{100}$ -acre plots having been substituted for the old $\frac{1}{80}$ -acre square plots, thus simplifying calculations and facilitating cultivation. In future all experiments will be carried on in quadruplicate.

Experimental work with cereals has clearly indicated that the earlier varieties do best in this district, notably Garnet, Ruby, and Reward wheats; Alaska, Montcalm, and Cartier oats; and O.A.C. 21, Ottawa 60, and Star barley. The improved surface drainage on this area will make it possible to seed cereals earlier in the spring than has been the case in the past.

Flax did very well this year but the hemp crop was practically a failure.

Variety and cultural tests with flowers, small fruits, and vegetables gave very satisfactory results. Strawberries were a particularly good crop. A new site has been located for a trial planting of apple trees on sandy soil. The Station grounds were improved by the planting of trees, hedges, and new ornamental borders.

In the poultry plant the experimental work embraces pedigree breeding, rearing, selection, feeding, and natural and artificial incubation. Excellent progress has been made with the flock of Barred Plymouth Rocks and the demand for day-old chicks is far in excess of the supply. Over a period of five years the average production has increased 107 eggs per bird. Eight of the twelve birds from this flock entered in the Egg Laying Contest at Ste. Anne de la Pocatière qualified for registration, and in the Canadian contest at Ottawa hens from this flock secured second and third places.

EXPERIMENTAL STATION, KAPUSKASING, ONT.

Seeding commenced early in May but, due to inclement weather, was not completed until well into June. With warm weather and ample moisture, crops made excellent growth during July and August, and while some difficulty was experienced in operating the binders, owing to heavy rains early in September, all crops were harvested in excellent condition.

Pure-bred and grade Ayrshire and Shorthorn cattle are kept at this Station. The experimental work consists of a comparison of various feeds, cost of milk production, and cost of rearing to various ages. The value of silage vs. clover hay for milk production is also being studied. There is also a flock of registered Shropshire sheep. Lambing results this year were not quite up to the average, being 1.37 lambs per ewe as compared with an average of 1.54 over an eleven-year period. A number of the best sows in the herd of pure-bred Yorkshires have been entered for advanced registry, and efforts are being made to determine the strains and individuals producing the highest percentage of select bacon hogs.

Field husbandry experiments occupy a large area and, although most of the projects have been in progress for only a comparatively short time, some interesting data have been obtained. The results indicate that, for practically all crops, seeding as early as the condition of the ground will permit is advisable from every standpoint. Open ditches and water furrows have proved of great value in carrying away surface water.

Three standard varieties of garden peas, viz., English Wonder, Thomas Laxton, and Stratagem, have been used in a "distance of planting" experiment. Over a five-year period, the 1-inch spacing has given the largest yield. The

use of mulch paper in growing common vegetables has not resulted in any material increase in yields. The success which has attended the planting of trees, shrubs and hedges, and perennial flowers around the Station grounds is indicative of the possibilities, in this direction, in this section of the country. Work with forage crops included variety tests, dates and methods of seeding experiments, and tests of various mixtures. Alfalfa gives promise of becoming one of the finest hay-producing plants in the north.

Fertilizers, singly and in combination, are being applied to the first crop in a four-year rotation of O.P.V., barley, clover hay, and mixed hay to determine their value.

In the poultry plant it has been found that while the use of electric light has materially increased the production of eggs during the winter months, yet when production over the whole year is considered there is practically no difference. The use of the trap nest is proving an excellent means of selecting and building up a high-producing flock of Barred Plymouth Rocks.

Bees came through the winter with but light losses, but suffered to some extent from the cold, backward weather during the month of May. An average of 134.9 pounds of honey per colony was produced. The greatest gain in one day was 18 pounds. During the year seventy-five queens were reared and successfully mated.

EXPERIMENTAL STATION, HARROW, ONT.

With a backward, cold, wet spring, followed by one of the driest midsummers on record, the yields of tobacco, oats, potatoes, and second and third cuttings of alfalfa were rather low, particularly on the lighter soils.

Tobacco experimental work is a major activity at this Station, and practically all phases of tobacco culture are covered. Various types of tobacco plant beds have been tested over a period of twelve years, the best results having been obtained from the semi-hot, glass-covered type. Fall prepared and steamed beds, apparently, have given as good results as those prepared and steamed in the spring.

The tobacco fertilizer experiments were completely revised in 1929. Wherever possible, the previous fertilizer work was incorporated into the new series. This new series represents twenty-eight treatments in quadruplicate, for flue-cured, Burley and dark-fired tobaccos.

As a rule, the higher rates of application of manure have given better yields of Burley tobacco, but results in 1929 were somewhat contradictory, no doubt partly due to the dry season and also to the fact that the soil has been built up to a state of fertility where it does not respond as well to such treatments. Three, five, seven and nine-year rotations, and plots continuously planted with tobacco, have been tested over a five-year period. The results indicate that three and five-year rotations are better for Burley tobacco on lighter soils. The poorest yields were obtained from the plots continuously planted with tobacco. On the lighter soils, drilling the fertilizer in the row has given better results than broadcasting, although on the heavier soils this latter method has given very good results when slightly increased quantities have been applied.

Continuous planting of flue-cured and dark-fired tobacco has proven impractical if continued over a period of years. Fall manuring and ploughing of grass and clover sods for Burley and Dark tobaccos has proven superior to spring manuring and ploughing over a period of years.

Tests have indicated that lower topping results in better quality leaf with just as high yields, but high priming is also necessary in order to secure heavy bodied leaf in dark tobacco.

Practically all standard varieties of tobacco produced good yields and quality on healthy soil, and four Burley varieties, viz., C.R.B., Standup Resistant, Broadleaf Resistant and one strain from Kentucky, grown in diseased plots have shown resistance to black rootrot.

Results of experiments indicate that a two-cent spread between the buying and selling price is necessary to make winter feeding of steers and hogs profitable.

Three hundred bushels of Banner No. 1 registered oats were produced during the past year, and twenty varieties of wheat and fifteen varieties of oats were tested in rod-row plots.

The cost of producing crops was somewhat higher than usual during the past year, due to the rather light yields obtained. Burley and flue-cured tobaccos were produced at a lower cost in the four-year rotations than on plots where tobacco is planted every year.

Forage crops work included tests of varieties and strains of corn, sugar beets, soy beans and broom corn. The earlier plantings of corn have consistently suffered more damage from the corn borer than rather late plantings, but one strain has been developed which appears to be promising from the standpoint of resistance.

Of the four varieties of early potatoes tested, the Irish Cobbler has given the best results from the standpoint of yield, especially the earlier diggings. Of the thirty varieties and strains of early tomatoes tested to determine their relative merits with respect to earliness, yield and quality, the best results have been obtained with two Alacrity strains. Canning peas, seed beans and sweet corn were also produced.

Six varieties of hemp were tested for seed production. The two best seed yielding varieties were Western C.D. 22 and Chington x Racolta.

EXPERIMENTAL STATION, MORDEN, MAN.

Fruit breeding is being carried on very successfully at this Station, particularly with apples, plums, gooseberries and raspberries. The new plums "Radisson" and "Wilson" are very promising. Nearly one thousand new apple seedlings fruited this year for the first time, and fifty-eight of these are regarded as good prospects. The apple and plum crops were very heavy and sour cherries also did well.

Experiments in the use of Ethylene gas for the ripening of tomatoes, celery, peppers, melons and apples have been undertaken. The usual variety and cultural tests of vegetables were continued and some promising introductions are being brought to the attention of private growers. The use of mulch paper appeared to benefit most of the crops used in the experiment, particularly cucumbers.

Some hundreds of new cross-bred varieties of roses have been produced, and the ornamental grounds attract wide attention. A recent acquisition is a collection of native fruits and ornamental plants gathered in northern Manitoba.

Three select seedling apples, one sandcherry, one laciniati leaved seedling red elder, and a double flowering native pincherry have been named.

The dry season adversely affected the yields of cereals but the grades were excellent. There was hardly any rust injury. In addition to the usual variety tests conducted on the Station, some co-operative experiments were carried on with farmers and Junior Co-operative Seed Growers.

Corn breeding is the principal activity in forage crops work but results this year were disappointing. A considerable quantity of seed of sweet corn was produced. Alfalfa proved its value as a hay crop.

In the five systems of crop rotations under trial particular attention is being given to the control of weeds. Rotation "C" has been effective in checking sow thistle.

Feeding and incubation experiments in the poultry plant have furnished much useful information. Rhode Island Reds are the only breed kept and there is a keen demand for breeding stock.

Honey production was quite good this year. Experiments in the protection of brood chambers, size of hives, swarm control, and wintering were continued.

EXPERIMENTAL FARM, BRANDON, MAN.

Seeding was not general until about April 22 and germination was somewhat delayed by cool weather in the early part of May. In some sections a frost, on June 12, damaged the grain quite extensively. Most crops suffered to some extent from the lack of moisture throughout June, July and August but, generally, the crops sown on well worked summer-fallow threshed out much better than was expected and the grain was of high quality. Late sown barley and oats were poor crops and the corn crop did not mature.

The herd of Dual Purpose Shorthorn cattle at this Farm is fully accredited and free from disease. During the past year, fifteen of the mature cows qualified in Record of Performance. The average milk record for the year was 5,253 pounds of milk, testing 3.83 per cent butter-fat. Feeding tests were conducted to determine the relative value of silage made from mature and immature corn, and of sweet clover silage for milch cows. Breeding and feeding experiments were also carried on with a flock of pure and grade Oxford sheep and a herd of pure-bred Yorkshire swine. Preliminary work towards a scheme of advanced registry was continued.

The excellent flock of Barred Plymouth Rock poultry has been bred from stock of known productive ability. The average pullet year record of the mature hens in the breeding flock is 202 eggs. The very few birds that reacted to the bacillus pullorum test were removed from the flock. In the Ninth Manitoba Egg Laying Contest, conducted at this Farm, one hundred birds qualified for registration. The average production per bird was 189.5 eggs, an increase of 63 eggs per bird over the production in the first contest.

Cost of production data acquired over a period of three years from the regular rotation fields show that the second crop of wheat after summer-fallow gave an average yield of 21 bushels per acre, at a cost of 98 cents per bushel. The first crop of wheat on summer-fallow land yielded 26.2 bushels per acre, at a cost of 88 cents per bushel. Wheat following grass and clover yielded 25.6 bushels per acre, at an average cost of 74 cents per bushel. Experimental results have shown that no advantage is gained by ploughing summer-fallow to a greater depth than from four to six inches. Recent work with commercial fertilizers indicates the advisability of sowing them into the soil close to where the seed is deposited.

The work with cereals includes not only the testing of varieties and strains but also breeding work. Some 200 sixth generation lines of wheat are on hand which have exhibited a very high degree of rust resistance under epidemic conditions. They also appear to be suitable in other agronomic characters. A fair percentage of these have given very satisfactory results in preliminary milling and baking tests conducted at Ottawa. In the wheat breeding work, "Reward" has been used as one parent in all cases, and has been crossed with such varieties as Hope, Marquillo, Ceres and its sister sort, 1656. Several wilt resistant strains of flax have been produced by selection.

Verification tests for elite and registered seed and other tests to determine the varietal mixtures in seed drill samples and commercial samples taken from elevators and overseas cargoes, were carried on.

Some very promising selfed strains of Northwestern Dent corn are ready for increase or hybridization and it is hoped that, from these strains or hybrids, one or more varieties will be obtained which are fairly resistant to late spring

frosts and also to smut. Breeding work is also being carried on with sweet clover and brome. Variety tests and cultural experiments are also in progress with corn, sweet clover, alfalfa, red clover, oats for hay, millets and miscellaneous grasses, to determine their suitability to Manitoba conditions.

Practically all vegetable crops gave fairly good yields. Potatoes grown inside the shelter belts gave from 161 to 367 bushels per acre but, in the open field, only about half an average potato crop was harvested. Plums, crab-apples, currants and raspberries did well but the season was too dry for strawberries.

Co-operative tests of Marquis, Reward, Garnet, Ceres, and Mindum wheats were carried on, at 130 points in the province. The variety Ceres yielded remarkably well this year and graded better than usual.

On the sixteen Illustration Stations supervised from this Farm, the production of seed grain is one of the most important features of the work.

EXPERIMENTAL FARM, INDIAN HEAD, SASK.

As a result of continuous drought throughout the spring and summer, fallow yields in many cases were reduced to half, while stubble crops were almost a complete failure.

Registered Clydesdale horses are kept on this Farm both for work and breeding purposes. There are also two herds of cattle one a beef herd headed by the Browndale bred bull, "Berserker," and the other a dairy herd of Ayrshires. Four females from this latter herd were exhibited at the Regina Summer Exhibition and took five first prizes and two championships. A small flock of Shropshire sheep and a herd of Yorkshire swine are also maintained and with these, breeding and feeding experiments were conducted. With the swine comparative tests are being made with pastures, different concentrates, and methods of housing.

The various crop rotations under test are designed to meet the requirements of the grain and diversified farmer and to provide a study of crop sequence, soil fertility and cost of crop production. The past season being an unusually dry one some interesting facts were brought out in a number of the cultural experiments.

Cereals grown on well prepared summer-fallow did fairly well, but oats and barley on stubble were almost total failures. Further quantities of Elite Stock seed of wheat, oats and barley were produced and test plots were again grown for the C.S.G.A. for the purpose of checking the purity of Elite and Registered seed stocks.

Forage crops came through the winter without any serious injury and alfalfa gave a surprisingly good yield. Sugar beets were fairly satisfactory as to sugar content, but the tonnage per acre was decidedly low. Root crops also gave poor yields.

Except where artificial watering was resorted to the borders, hedges and wind breaks made very poor growth and vegetables were, in many cases, a complete failure. All tree fruits, however, did remarkably well, plums being a particularly heavy crop and the fruit well sized. The apple crop was the largest in the history of the Farm, Saunder's Hybrid Crabs giving particularly heavy yields. Plant breeding studies in disease and insect control, winter storage and winter hardiness, etc., were continued.

White Wyandottes and Light Sussex are the two breeds represented in the poultry plant. Hatching and rearing results were affected by the adverse conditions during spring and summer. In the Tenth Saskatchewan Egg Laying Contest 65 birds qualified for registration. This is the largest number in any one year since the contest was started.

EXPERIMENTAL STATION, ROSTHERN, SASK.

Seeding was done under very favourable conditions, but from the middle of June there was insufficient moisture, with the result that yields of both field and garden crops were below average. The corn, however, was of very high quality.

The herd of Holstein-Friesian cattle at this Station has been regularly tested for tuberculosis since 1920, and for contagious abortion since 1928, without revealing any reactors to that disease. A flock of high grade Leicester and pure bred Suffolk sheep is kept and lambing results during the past year were satisfactory. Nineteen litters of pure bred Yorkshire swine were entered in the Advanced Registry test and a number of feeding experiments were conducted.

Some very interesting and valuable data are being gathered on sequence of crops, cost of production of various crops and relative profits over a long period of years of different rotations. An extensive series of cultural experiments is also in progress.

Satisfactory progress has been made in the fruit breeding work with apples, which was undertaken in 1927. The importance of manure for the vegetable and potato crops was strikingly demonstrated during the past year, the results indicating that well-manured land holds more moisture than unmanured land. Evergreens have done particularly well at this Station, some of them having attained a height of between 20 and 30 feet.

Variety tests of wheat on summer-fallow have been carried on for a period of five years. The three leading varieties are Red Bobs, Garnet and Marquis, ranking in the order named. Victory, Banner and Leader have been the highest yielding varieties of oats on stubble land over a period of six years. Laurel is a promising hullless variety.

Corn and sunflower crops were practically a failure. Roots also were below the average, but fair crops of hay were obtained.

The past year was a very satisfactory one in the Poultry Plant. No bird laying less than 175 two-ounce eggs per year is retained in the flock and many of the hens have laid over 250 two-ounce eggs in their pullet year. The year was an exceptionally poor one for bees.

EXPERIMENTAL STATION, SCOTT, SASK.

Lack of soil moisture, with low temperatures in the early part of the season retarded the growth of wheat. These conditions followed by hot dry weather with high winds in July had the effect of reducing all grain yields. However, the wheat that was harvested was of excellent milling and baking quality.

A herd of dual-purpose Shorthorn cattle is being developed at this Station, and a steady improvement is noticeable in the milk records. The herd has successively passed the tests for tuberculosis and contagious abortion.

Sweet clover fed to steers increased the individual gains by over 50 pounds, but at a valuation of \$10 per ton it would not seem economical to purchase it for steers on a full grain ration.

Rambouillet sheep at this Station have raised a higher percentage of larger lambs to weaning age, and have clipped a heavier fleece of higher quality than either the Shropshire or Cheviot breeds.

Swine feeding tests have shown that frozen wheat is about equal in value, pound for pound, to oats and barley, whether fed alone or in combination.

Straight grain and mixed farming crop rotations are under tests and cost data have been recorded. The advantage of early ploughing for summer-fallow was quite noticeable this year. An application of superphosphate produced an average increase of $5\frac{1}{2}$ bushels of wheat per acre on summer-fallow with five days earlier maturity.

The wheat crop was of good quality, but the early and medium early varieties gave better yields than the later varieties. Oats were a poor crop with short straw and low yields. Over a period of five years Trebi has given the highest yields of barley, but in the tests this year Haanchen was the leading variety.

There was considerable winter killing of forage crops. Seasonal conditions resulted in a low yield of hay; corn was an exceptionally poor crop and sunflowers were not much better. A leading feature of the forage crop work at this Station is the testing of different strains of western rye grass.

Raspberries, strawberries and gooseberries were badly winter killed, but currants came through better in that respect. Work with vegetables has been expanded by the inclusion of mulch paper and commercial fertilizer studies. An avenue of Lodgpole pine trees and new rose and peony beds were planted during the year.

Exceptionally good results were obtained in the poultry plant this year. The number of eggs required per chick when wing banded was only 1.6. A small flock of Mammoth Bronze turkeys has been established.

There were practically no winter losses in the apiary but it was a poor year for the production of nectar. A Bee Day, at which the Provincial Apiarist assisted, was held at the Station on August 9.

EXPERIMENTAL STATION, SWIFT CURRENT, SASK.

The season of 1929 was an exceptionally unfavourable one. High temperatures, strong winds and lack of precipitation combined to reduce the yields of all crops.

The herd of Holstein cattle at this Station is being disposed of and attention is now being directed towards strengthening the dual-purpose Shorthorn herd. Further progress has also been made in the development of a small breeding herd of Yorkshire swine.

Tests and comparisons of various farm implements are featured at this Station. The studies of the combine were expanded and further data were secured on the use of the swather. The usual cultural and rotation experiments were continued.

Small seeders, developed at this Station, were supplied to other Experimental Farms in the Prairie Provinces, as well as to several other institutions. Two small threshers also were constructed and these are under test at the Dominion Rust Research Laboratory, Winnipeg. Tests of varieties, strains and selections of all the common cereals and all forage crops were continued. The effect of the drought was noticeable even in the corn, which is one of the most drought-resistant crops. Of the hay crops, sweet clover did best. A number of native grasses are being tested in comparison with established sorts.

Variety tests of bush and tree fruits, flowers and all the common vegetables were carried on. Notwithstanding the drought, most of the ornamental and shelter belt trees did fairly well.

A flock of Barred Rock poultry is maintained, chiefly as a means of supplying good hatching eggs and breeding stock to farmers who wish to improve the quality of their flocks.

EXPERIMENTAL STATION, LETHBRIDGE, ALTA.

While there was ample precipitation during the months of April, May and the first half of June, the dry hot weather which set in on June 17 and lasted until harvest time dissipated the promise of an unusually abundant grain crop. However, while yields did not come up to earlier expectations the quality of the grain was excellent. The sugar beet crop was good, but the alfalfa crop was lighter than usual owing to shortage of irrigation water in July and August.

In a feeding trial with horses doing heavy work a comparison was made between alfalfa and timothy the results being in favour of alfalfa. Some very good Percheron fillies are being developed.

Steer feeding experiments were conducted to determine the best combination of home grown feeds produced in the irrigated district of Alberta, for fattening this class of cattle.

The quality of the herd of Holstein-Friesian cattle at this Station has continued to improve. The entire herd gave negative reaction to the serum test for contagious abortion.

Breeding work is carried on with the Corriedale and Rambouillet breeds of sheep. Feeding trials were conducted to determine the value of certain feeds and to give information on the rapidity and economy of gains in Rambouillet and Corriedale grade lambs as compared with Shropshire grade lambs. A range flock of ewes was pastured on the Crows Nest Forest Reserve.

Work is in progress in connection with the Advanced Registry Policy for swine, and various types of swine shelters are being studied.

An excellent flock of Barred Plymouth Rocks has been developed through careful pedigree breeding. Two different types of poultry houses are under test and a number of feeding experiments are being carried on. In the Alberta Egg Laying Contest forty-seven birds qualified for registration.

All crops grown on that section of the Station devoted to dry land farming experiments (with the exception of corn grown on blown soil) returned a profit over cost of production. Unusual results were obtained with wheat grown on stubble land; spring ploughed land gave yields comparable with those obtained on summerfallow, and in some cases also a higher yield.

Bulletin 125 N.S., "The Use of Irrigation Water on Farm Crops," was published during the year, giving a full report of this investigation over a period of five years. Commercial fertilizers and barnyard manure are being tested on both dry and irrigated land.

Variety tests constitute the major portion of the experimental work with cereals, both on dry land and under irrigation. Elite stock seed of Marquis, and Early Red Fife wheat was also produced. The possibilities of growing canning peas on irrigated land is being studied in view of the increasing interest in this crop.

Among the forage crops under test particular attention has been given to sugar beets particularly in regard to cultural methods, distance of thinning and dates of seeding.

The usual variety and cultural tests of vegetables, bush fruits and perennial and annual flowers were conducted and some attention was given to the production of vegetable seeds.

Apiary problems, particularly those affecting the beekeepers in southern Alberta are receiving constant attention.

EXPERIMENTAL STATION, LACOMBE, ALTA.

There was very little moisture in the soil in the spring and this followed by an exceedingly dry summer resulted in crop yields varying from complete failure to 75 per cent of the average.

Breeding and experimental work is carried on with pure bred Shire and Clydesdale horses, particular attention being given to the control of joint ill and a study of wintering brood mares and idle horses.

The herds of Aberdeen Angus and Holstein-Friesian cattle are both free from tuberculosis and have been fully accredited for the past five years. With the co-operation of the Health of Animals Branch all the cattle in these herds regardless of age or sex have been subjected to tests for the purpose of gaining

information as to the possibility and practicability of eradicating bovine contagious abortion and allied diseases by means of the agglutination and complement fixation blood tests. Re-actors to this test have been slaughtered and this has interfered to a large extent with the experimental feeding work and with sales of pure bred breeding stock to farmers.

There are also excellent herds of Berkshire, Tamworth and Yorkshire swine. During the past year Yorkshires again led in prolificacy followed by Tamworths and Berkshires in the order named. Various feeding experiments have been carried on and for the fifteen litters tested under the scheme for Advanced Registration it required 373 pounds of meal to produce a gain of 100 pounds. To bring the pigs to market weight required 204.1 days, the daily gain per hog from weaning to slaughter being 1.2 pounds.

White Wyandottes are the only breed of poultry kept and attention is being given to size of egg as well as increased production. All birds retained for breeding purposes have been blood tested for Bacillary White Diarrhoea.

Straight grain growing rotations are being compared with mixed farming rotations and summerfallow substitutes are compared with the bare fallow. Sweet clover is proving an excellent summer-fallow substitute crop where moisture is not too limited and perennial weeds such as couch grass are not a serious problem. It has been found that when the soil is very dry in the fall, spring ploughing gives better results than fall ploughing, but if there is ample moisture fall ploughing will give better results than spring ploughing.

Variety tests of cereals and forage crops were continued as also were the verification plots for the C.S.G.A. Seed of Reward wheat, Banner and Alaska oats was produced and distributed. A comprehensive experiment has been undertaken in which different mineral fertilizers are compared with lime and barnyard manure.

The dry season greatly reduced the yields of vegetables and fruits and the lack of bloom resulted in a honey crop only about one half that of a normal season.

EXPERIMENTAL STATION, WINDERMERE, B.C.

The spring season was normal and crops got away to a good start. However, there was very little precipitation in July and August and frequent irrigations were necessary. Fair crops of all kinds were harvested.

During the past year four high class cows purchased in Eastern Canada were added to the Ayrshire herd at this station. It is pleasing to report that this herd has again successfully passed the T.B. test and also the regular blood tests for contagious abortion. Very good results have been obtained in a grading-up experiment with a Hampshire ram on grade Oxford ewes. Breeding stock from the herd of Yorkshire swine is in constant demand throughout the district.

Seven different crop rotations are under study, and in all of these alfalfa, peas and potatoes have been included, these being the leading crops in the district.

While rod row variety tests of cereals are conducted, the high cost of land and high production costs due to irrigations, prohibit the growth of practically all small grains to any extent.

Two good crops of alfalfa can always be depended upon, and sunflowers are a more reliable silage crop than corn. Experiments are now under way with alfalfa for seed production.

A four-year rotation of oats, clover, potatoes and peas is being followed in an effort to improve the fertility and increase the humus content of the soil, using chemical fertilizers alone, chemical fertilizers with barnyard manure, and chemical fertilizers with a crop ploughed in. Superphosphate has given excellent results and a crop ploughed in materially increases the humus content.

The new garden area is located on a gentle slope which is ideal for irrigation. A considerable amount of transplanting has been done, and a rockery is being established.

Single-comb White Leghorns are the only breed of poultry kept. The extremely dry summer was hard on the birds and production was much below that of the preceding year. It required 2.1 eggs to produce a chicken six weeks old.

It was an exceedingly poor season for bees. The largest yield of extracted honey from one colony was 41 pounds, but the average production was only 27.1 pounds per colony.

EXPERIMENTAL STATION, SUMMERLAND, B.C.

Precipitation during 1929 was much below the average for the past fourteen years, and irrigation water was very scarce during the summer. The fruit crop, however, while somewhat below the average in yield, was well up to the average in quality and the growers received good returns.

Horticulture is a major activity at this Station and some very valuable work has been accomplished, particularly in regard to the problems of fruit picking, handling and storing. The problem of Jonathan breakdown has received considerable attention and advice given to the fruit growers in the Penticton district this season, based entirely on experimental findings accumulated at this Station, proved particularly valuable. Good progress has also been made in the development of hardy root stocks for apples and in the dates of picking experiments with pears, peaches, prunes, etc., in order to obtain maximum maturity and shipping quality.

A start has also been made on some very valuable work in the processing of fruits and vegetables, under the Dehydration Committee of the department. Excellent progress has been made in the breeding and isolation of new and improved strains of vegetables and selected tomato seed of improved strains is now being offered to the growers.

The lawns and ornamental grounds have been further improved and a test garden for roses has been established. Provision has also been made for the testing of herbaceous climbers and many new varieties and species of herbaceous flowers and shrubs have been planted out.

Much useful information has been obtained from the variety and cultural tests with tobacco.

The herd of Jersey cattle at this Station is fully accredited, having successfully passed the regular tests, both for tuberculosis and contagious abortion. Substantial improvement has been made in the average production of this herd during the past year. Swine work is directed towards the development of a true bacon type of hog.

In the poultry plant excellent progress was made in the development of the flock of White Wyandottes. The chicks were raised on clean fresh ground and the flock was blood tested for Bacillary White Diarrhoea. The results were evident in the splendid production records, the hatchability of the eggs, and in the vitality and livability of the chicks.

EXPERIMENTAL FARM, AGASSIZ, B.C.

Precipitation for the whole year 1929 was the lightest ever recorded at this Farm. Fortunately, there was ample precipitation during the spring and early summer to carry the crops through to maturity, and all crops yielded well.

There is an excellent stud of pure-bred Clydesdale horses at this Farm and, with the exception of the four foundation mares, all of them have been bred on the Farm.

It is worthy of record that this Farm, during the past year, was awarded a "Master Breeder's Shield" by the Canadian Holstein-Friesian Association, for having bred twelve XX bulls, twelve Gold Medal cows and twelve Excellent cows in a herd under 80 head. This splendid herd has been developed from six foundation cows. Some interesting feeding experiments are in progress, including a comparison of fish meal versus linseed meal. Different silages are also being compared.

Some valuable additions have been made to the flock of Dorset sheep, and the offspring of one of the rams are particularly promising.

Experimental work is also carried on with a herd of Yorkshire swine and seven sows are entered under the policy of Advanced Registry for swine.

The rod-row system of testing cereals is practised at this Farm and Victory oats and O.A.C. 21 barley have given excellent results.

Forage crops under test include different varieties of ensilage corn, sun-flowers, mangels, carrots, sugar beets, annual hays, and grasses and clovers, alone and in combination. An excellent quality of flax for fibre was also grown and tobacco yielded well.

Many of the variety tests of garden vegetables have been discontinued and greater attention is now being given to more intensive cultural projects and the production of foundation seed. The use of paper mulch appeared to be of benefit to certain vegetable crops, while, in the case of others, there was no apparent improvement from the use of this material. However, the work has not been carried on for a sufficient length of time to warrant definite conclusions.

The flock of Barred Plymouth Rock poultry has an outstanding reputation and it is impossible to fully meet the demand for breeding stock and hatching eggs.

Although production of the Egg Laying Contest was not as high as usual, owing to an outbreak of infectious bronchitis, some creditable records were made, notably that of the pen of White Wyandottes owned by Mr. Caul, of Appledale, B.C. This pen laid 2,592 eggs, scoring the highest of any Wyandotte pen on the continent. Two hundred and forty-three birds qualified for registration, sixteen being in the 300-egg class.

With a view to carrying on more intensive experimental work, the apiary has been increased to sixty colonies of bees. Considerable attention has been given to queen breeding with satisfactory results.

EXPERIMENTAL STATION, SIDNEY, B.C.

The rainfall in 1929 was the lowest on record for Vancouver island. Fortunately there was sufficient moisture in the early part of the season, and hay and grain crops as a result were much above the average. Lack of moisture later in the season seriously affected the root crop and the potatoes. The fruit crop was excellent, the pears being outstanding. Experimental work in breeding, rearing and feeding is carried on with a herd of Jersey cattle. Particular attention has been given to the problem of contagious abortion with the co-operation of the Health of Animals Branch. The whole herd has been subjected to a series of blood tests and all re-acting breeding cows have been removed from the herd and segregated. With the negative herd subjected to periodic tests and no contact with any cattle of unknown history, and with special care in the raising of calves from re-acting cows, it is hoped to develop a clean junior herd. With the success which has attended these efforts to date it is hoped soon to be able to report that contagious abortion on this Station is a thing of the past. Data collected in the course of this work indicates that the condition known as systic ovaries, has no connection with abortion in so far as *B. abortus* is concerned.

Great interest centres around the poultry work in this Station and there is the keenest demand for information regarding breeding, rearing, housing and

feeding problems, particular attention being given to the question of internal parasites and related subjects. The 1929 Egg Laying Contest was outstandingly successful from every standpoint.

While wheat growing is not carried on on an extensive scale on Vancouver Island some remarkably good yields have been obtained. During the past year yields of 45 bushels per acre and more were common. Fall sown oats and barley also did well.

Horticultural work is a major activity on this Station in view of the fact that the great majority of people on the Island are directly or indirectly connected with the industry. Special attention has been given to bulb growing and seed production. Elite registered vegetable seed is produced in quantity and will be available for distribution among seed growers in the near future. The dehydration of fruits and vegetables was undertaken this year for the first time.

EXPERIMENTAL SUBSTATION, BEAVERLODGE, ALTA.

The germination of cereals was uniform but lack of subsoil moisture reduced yields, and weather conditions just before harvest delayed ripening.

Reward wheat yielded 33 bushels 23 pounds per acre, and the field crop graded No. 1 Northern and tested 68 $\frac{3}{4}$ pounds per measured bushel as threshed. It ripened six days earlier than Marquis and one day earlier than Garnet. This last named variety yielded 38 bushels 17 pounds, Marquis 37 bushels, and Early Triumph 39 bushels 9 pounds per acre.

Over a period of eleven years, Banner oats have outyielded Victory by an average of 2 bushels per acre, but this year Victory was the leader by a fairly substantial margin. Premost flax and three varieties of peas all gave larger than average yields, but O.A.C. 21 barley yielded a little below average. Winter grains came through with very little killing.

None of the perennial forage crops were winter-killed but the effect of the lack of subsoil moisture was apparent, the growth in the meadows being very uneven. Yellow-flowered Siberian alfalfa has proven a short cropper in a dry season. Timothy yielded considerably better than red top, orchard grass and Kentucky blue, but was substantially outyielded by Brome and Western rye from the 1927 seeding. Arctic sweet clover, seeded in 1928 without a nurse crop, gave a yield of 3,727 pounds per acre.

Some exceedingly interesting and valuable data are being obtained on the effect of topography upon minimum temperature occurrence.

Particular attention is being given to a study of methods of seeding down meadow crops.

Five varieties of potatoes, Gold Coin, Irish Cobbler, Early Rose, Mitchell's Excelsior, and Bliss Triumph, all responded favourably to an application of 100 pounds of superphosphate per acre, scattered along the open furrow. They bloomed earlier and made more vigorous growth than those untreated but because of this forward development, the earliest variety, Early Rose, matured in advance of the best growing weather, with the result that the yield was 10 bushels less per acre where treated.

At least a hundred species, and a much larger number of varieties of trees and woody ornamentals, have come successfully through one or more winters at this Station. Herbaceous perennials such as peony, iris and rose mallow seem quite hardy. Small fruits again did well in 1929 but annual flowers and vegetables suffered from the drying of the land and the effects of strong winds on the seedlings.

The bees wintered fairly well, both in the cellar and in outdoor packing cases.

EXPERIMENTAL SUB-STATIONS

The Experimental Sub-Stations have continued to provide much useful and interesting data on the agricultural possibilities of the districts in which they are located.

At Fort Vermilion, Alta., seeding was fairly general by April 30th and all seeding and planting was completed during May. Weather conditions hastened the germination of seeds, and pastures and all crops made good growth. Four degrees of frost were recorded on August 25 and immature crops such as beans, corn, sunflowers, and buckwheat were damaged. Fortunately all cereals with the exception of Marquis, Red Fife and Kitchener wheats and Barks barley had been cut previously and these four named varieties were fully matured, so did not suffer any damage. Winter conditions had been hard on the fruit plantations and there was a good deal of root injury to fruits and other garden plants, particularly roses and flowering shrubs. Many of the clovers and less hardy varieties of grasses were totally winter killed. Winter rye also suffered to some extent and winter wheat was a total loss.

A very cold and backward spring season was experienced at the Sub-Station at Fort Smith, N.W.T., but all crops did fairly well. Marquis wheat gave a satisfactory yield but the crop was not fully matured when harvested on August 29. Banner oats did very well and matured. Vegetables also did well on the whole but the potatoes suffered injury from worms.

The cool season experienced at Fort Resolution, N.W.T., retarded plant growth. Nevertheless Canadian blue grass, Golden millet, hullless oats, and Himalayan barley did fairly well and potatoes yielded higher than in the previous year. Of the different kinds of vegetables sown the following did very well: cabbage, Copenhagen Market and Danish Ballhead; carrots, Chantenay, and Guerande; beets, Extra Early Egyptian and Crossby; turnips, Purple Hop Milan, Kangaroo, Purple Top, and Jumbo. Tomatoes, gave an abundance of fruit but did not ripen. There was good display of bloom in the flower garden from late summer until October 15.

At Fort Providence, N.W.T., potatoes planted late in May derived great benefit from the rains in June. They made excellent growth and yielded quite well. Carrots, beets, turnips and onions were poor but cabbage and lettuce did exceedingly well. Oats made better growth than in previous years a portion of the crop being used for green feed and the rest for poultry feed.

The most northerly Sub-Station is at Fort Good Hope, N.W.T., situated at 66° 15' 12" northern latitude and 128° 49' western longitude, quite close to the Arctic Circle. Wheat, oats and barley sown on May 11 matured and were harvested between August 22 and 24. Various forage crops also were tested in small plots with fair results. Potatoes gave a return of about five for one. Carrots, parsnips, and cabbage did quite well. Beans and peas also made a good showing but corn was destroyed by frost on August 24.

The experimental area at Betsiamits, P.Q. is located on low wet land and this combined with a cold wet season resulted in the practical failure of all cereals. Most of the vegetables also did poorly.

DAIRY AND COLD STORAGE BRANCH

GENERAL

The activities of the Dairy and Cold Storage Branch have followed the same general lines as in recent years.

The Research Division has dealt with some new defects in cheese, and has been able, as the result of investigations, to suggest positive remedies.

The staff of dairy produce graders was brought up to a full complement at the beginning of the year.

A reference to the tables below will show that the percentage of first grade cheese was practically the same as in 1928, in spite of the fact that the season of 1929 was a more difficult one for the cheesemaker than the preceding one.

The percentage of first grade butter was 3.25 per cent lower than it was in 1928. This apparent falling off in quality loses its significance when it is noted that there were 120,718 more packages graded than in 1928, which means that butter was graded from a number of creameries for the first time. Less than 25 per cent of the butter produced in Canada is offered for grading. Butter put up in one-pound packages at the creamery is not graded. It is only when butter is to be exported in solid pack that grading is compulsory.

The Cold Storage Division had some activity in connection with the erection and completion of the Pacific Coast Terminals (cold storage) at New Westminster, B.C., and The Nova Scotia Fish and Storage Terminal at Halifax, N.S., both of which are receiving a subsidy under the provisions of the Cold Storage Act. These two establishments are very complete and up-to-date in every respect, and they make notable additions to cold storage facilities in Canada.

PRODUCTION

The unfavourable weather and feed conditions in 1929 resulted in a decrease in cheese production, according to the preliminary statement published by the Dominion Bureau of Statistics, of 25,000,000 pounds of cheese. The same statement shows a decrease of 4,554,367 pounds in creamery butter.

The following table gives the production of factory cheese and creamery butter, by provinces, for the calendar years 1928 and 1929. The figures for 1929 are preliminary and may be somewhat revised when final returns are available. The decrease is emphasized by the fact, that taking Canada as a whole, the season of 1928 was above the average for production.

THE EXPORT TRADE

There was no regular export of butter to the United Kingdom during 1929, but shipments to Newfoundland, Bermuda, Bahamas, British West Indies, British Honduras and British Guiana, have been continued and increased in some cases during the year under review. The new trade agreement has promoted the trade in dairy produce from Canada so far as the West Indies are concerned.

The exports of cream to the United States show a decrease for the year ended March 31, 1930, of 568,000 gallons as compared with the previous fiscal year. There was also a decrease of 711,274 gallons of milk in the exports to the same market.

The total exports of cheese (91,719,200 pounds) during the year reached the lowest figure since 1889.

GRADING OF BUTTER AND CHEESE

The details of the gradings will be found in the following tables. The different provinces show some variation in the percentage of first grade cheese and butter. There is even greater variation between districts or counties. The cheese produced in the counties of Oxford and Middlesex, Ontario, averaged over 98 per cent first grade. A number of cheese factories had 100 per cent first grade.

ICED CAR SERVICE

The arrangement with the different railway companies which provides for iced cars on certain routes leading to Toronto, Montreal, Quebec, and Halifax, for the carriage of butter, eggs, and cheese in less than carload quantities, operating on a regular weekly or fortnightly schedule was continued during the year.

REFRIGERATOR CAR INSPECTION

The refrigerator cars operating under agreement between the Department and the railways are inspected on arrival at the terminals. The condition of the car, the quantity of ice in the bunkers, temperature of contents, etc., are noted. Any defects in the service are at once reported to the proper authorities.

CARGO INSPECTION

The cargo inspection service at Montreal, Halifax, and Vancouver, and also at ports in the United Kingdom was again in operation throughout the year. The inspectors take note of the condition of packages and contents, take the temperature of certain products and make a record as to the position in which these products are stored in ships as loaded at the various ports. Recording thermometers are placed in the various cold storage chambers or with any cargo of perishable nature carried in ordinary stowage. The charts are removed from these instruments by the inspectors at United Kingdom ports, who return them to Ottawa where they are blue printed and copies distributed to interested shippers, to the shipping companies and the Board of Trade at Montreal.

Inspectors report a great improvement in the condition of cheese shipments, as regards packages, since the regulations under Part 1 of the Dairy Industry Act requiring all cheese packages to be re-enforced with wire or strapping became effective on the 1st of June, 1929.

The department lost through death the services of Mr. P. J. Gabler, who had been Cargo Inspector at Liverpool, England, since January, 1914.

DIVISION OF DAIRY RESEARCH

Investigational work commenced by the Division of Dairy Research on a colour defect in cheddar cheese was completed in December, 1929. Through bacteriological and biochemical studies factors responsible for the defect were established. The results of this investigation have been put into the hands of all cheesemakers and have been extremely effective in overcoming this particular colour defect in cheese. A complete report was published in Bulletin No. 128, N.S., Department of Agriculture, entitled "A Colour Defect of Cheddar Cheese".

A second type of discoloration in cheddar cheese has also been investigated. The cause of this defect was found to be due to metallic contamination, details of which were published in Scientific Agriculture, Vol. X, No. 8, April, 1930, under the title of "A Case of Metallic Discoloration of Cheddar Cheese".

During the year a study was commenced on bitter flavour in pasturized milk. An organism, hitherto undescribed, has been isolated. Further studies are under way in the hope of obtaining information which will assist in controlling such organisms in commercial milk plants.

For the purpose of standardizing the microbiological technique of butter, co-operative work has been continued under the American Dairy Science Association Committee.

The Division of Dairy Research has been requested by the Western Canada Buttermakers to assist in establishing a standard butter colour chart. Some work has already been done on this problem.

As in other years, the Division has assisted in inaugurating and conducting milk and cream competitions in conjunction with Provincial and Convention exhibits.

The usual assistance has been given on mould and yeast work. Numerous bacteriological and chemical tests were made on samples submitted to the laboratory, namely, well water, butter, cheese, milk, condensed and evaporated milk, and milk powder.

Articles have been contributed to the Agricultural press and dairy magazines. A number of papers have been read and addresses given at the various dairy conventions and clubs throughout the country.

MILK UTILIZATION SERVICE

Exhibits.—Exhibits were arranged at several centres—Hamilton, Ont.; Canadian National Exhibition (Toronto); Royal Winter Fair (Toronto); St. John, N.B.; International Congress of Nurses (Montreal); Fédération des Oeuvres Sociales de Santé (Montreal); Sherbrooke, P.Q.; Three Rivers, P.Q.; and other places.

In addition, a great deal of material was loaned to teachers, nurses, and provincial officials for use at fairs, school fairs, clinics, etc.

Lantern slides, films, posters and equipment for the playlet have been in constant demand by health workers.

Publications.—It is proposed to publish another poster, in French and in English, for use in schools. This will be distributed free to teachers and nurses.

It has been necessary to have reprints of all the publications of this Service, including the book cover and the poster issued for use at Mothers' Clubs, clinics, and in schools. A bulletin on the Care of Milk in the Home is now being prepared. Stories and articles for school use are sent out in mimeographed form and this series will be added to.

Addresses.—Addresses were given to the teachers-in-training in Normal schools in the various provinces.

Talks were given in different schools and clubs upon request.

Lectures and demonstrations in co-operation with Women's Institutes and other women's organizations are being arranged.

Conventions.—A number of conventions and conferences such as arranged by the Women's Institutes, teachers, International Congress of Nurses, etc., were attended and the work of this Service explained and the material published brought to the attention of the members.

Articles.—Many articles relating to the work were prepared and published by different newspapers and magazines.

This service is conducted to promote knowledge of the nutritive value of milk and milk products. The officers carrying on this Service work in conjunction with Health and Child Welfare organizations. Publications regarding the uses of milk and milk products are widely distributed and information is disseminated through booths and demonstrations at the principal fairs, school fairs, educational trains, lectures, etc.

Miss Helen G. Campbell, who has been in direct charge of this work since its inception, has resigned to accept a more highly paid position with a large publishing company. Miss Campbell was exceptionally well qualified for such work and her resignation was received with much regret.

THE ADMINISTRATION OF THE DAIRY INDUSTRY ACT, PART I, FISCAL YEAR 1929-30

The staff engaged in the administration of the Dairy Industry Act, Part I, included one chief inspector, six full time inspectors and four part time inspectors. The more important provisions of the Act are those prohibiting the manufacturing and sale of

- (a) Substitute for butter manufactured wholly or in part from fat other than that of milk or cream;

- (b) Butter containing more than 16 per cent of water;
- (c) Butter or cheese containing less than the specified minimum of milk fat;
- (d) Butter in prints of improper weight;
- (e) Butter or cheese which is falsely or improperly branded.

Inspectors make preliminary tests for water content of samples of butter secured from manufacturers, wholesalers and retailers. Samples which, according to the preliminary tests, show more than sixteen per cent of water as well as samples of butter or cheese suspected of being adulterated by means of foreign fat or of containing less than the legal minimum of fat are submitted for chemical analyses. There were 9,513 preliminary tests of samples of butter made during the year of which 1,187 samples showed more than 16 per cent of water.

The following statement shows the number of convictions secured on account of various offences and amounts of fines imposed:—

Offence	Number of convictions	Fines
		\$
Excess water in butter.....	119	2,220 75
Butter deficient in fat.....	2	20 00
Short weight prints of butter.....	7	105 00
Butter substitute or artificial butter.....	13	3,605 00
Having cocoanut fat on premises of creamery.....	1	200 00
Selling skim-milk cheese without displaying the placard.....	1	15 00
Incorporating inferior curd in cheese.....	1	10 00
Total.....	144	6,175 75

Convictions secured during the year show an increase of fifty-three, and fines an increase of \$3,097.45 as compared with the previous year.

The authority conferred by the Act to seize and confiscate illegal dairy products or equipment used in the manufacture or manipulation of illegal dairy products is only exercised in extreme cases. Following is a statement of such confiscation of butter showing the number of confiscations on account of different offences, the number of pounds so confiscated and the proceeds from the disposal of the same.

Offence	Number of confiscations	Number of pounds confiscated	Net proceeds
			\$
Butter substitute containing fat other than milk fat.....	4	2,940	866 61
Part of equipment used in manufacturing.....	1	Feed Boiler	3 00
			869 61

The proceeds from fines imposed and from sale of confiscated products have been remitted to the accountant.

HEALTH OF ANIMALS BRANCH

This Branch is employed in preventing the introduction of animal diseases from foreign countries, maintaining the health of our own live stock and safeguarding our foreign markets and export meat trade. Research work on the problems of contagious disease is constantly in progress with a view to improvement in methods of control. The three divisions of this Branch work in close co-operation.

CONTAGIOUS DISEASES DIVISION

The officers of this Division are concerned with the prevention of entry into Canada of diseases of animals from other countries and the control and eradication of contagious disease within our own borders.

The prevalence of serious contagious diseases in many countries throughout the world necessitates constant vigilance and the enforcement of restrictive measures for the protection of our live stock industry.

Foot and mouth disease has continued to be prevalent over practically the whole of the continent of Europe and due to the elusive character of this infection it is evident that the strictest precautions must be continued to ensure exclusion of this disease. Foot and mouth disease has never gained entrance into Canadian herds and our protective measures are enforced to maintain this fine record.

On April 23, 1929, an order was issued prohibiting the importation of

- (1) Manure and fertilizers containing animal products.
- (2) Bone meal and foodstuffs containing animal matter.
- (3) Second hand or previously used bags from all countries with the exception of direct shipments from Northern Ireland, Irish Free State, Australia, New Zealand, Union of South Africa, the United States of America and Japan, and shipments of bone meal from specially approved premises in Great Britain.

On May 18 an order was issued removing the restrictions against importations from California, Oregon, Nevada, Arizona in the United States and Lower California and Sonora in Mexico, which had been imposed following an outbreak of foot and mouth disease near Los Angeles, California, in January, 1929.

Due to an outbreak of foot and mouth disease in Scotland an order was issued on September 9, 1929, cancelling permits for the importation of ruminants and swine from that country. As, however, no outbreaks of this disease had occurred in England or Scotland for a period of sixty days permits for the importation of cattle and sheep were issued after March 8, 1930.

On September 28, 1929, an order was issued prohibiting

- (1) The bringing into any port in the Dominion of Canada of any cattle, sheep, goats and other ruminants and swine for any purpose including those carried as "ships stores" except and unless the master of the vessel has in his possession the necessary permit issued before the animals were embarked.
- (2) The landing or discharging of manure, garbage and refuse in Canadian ports and waters from ships sailing from other countries.

On October 10, 1929, an order was issued restricting the importation of mill-feeds and grains into Canada. This order was cancelled and another issued on December 19 which came in force on and after January 1, 1930, requiring certification by British Consular officers or in countries where there are no British Consular officers by officials designated by the Government concerned whose names have been received by this Department and in the case of United States by an official of the United States Department of Agriculture.

The following changes were made in the list of ports through which animals subject to inspection only are permitted to enter Canada.

On April 8, 1929, the port of entry Beauceville, P.Q., was removed from the list.

On September 13, 1929, Beebe Junction, P.Q., was closed and Rock Island, P.Q., was established as a port of entry in its stead.

On February 26, 1930, St. Camille, P.Q., was closed and Lac Frontière, P.Q., established as a port of entry.

As some misunderstanding had arisen as to the sheep and goats which were permitted entry from the United States on certificate under Ministerial Order of June 11, 1927, another order was issued on March 13, 1930, in which section (b) was changed to clearly indicate that only pure-bred registered sheep and goats for breeding purposes were permitted entry under section (b) of this order.

There have been no serious outbreaks of contagious disease in Canada during the year.

Glanders.—Three small outbreaks occurred in Quebec in which eight horses were slaughtered and one outbreak in Saskatchewan which required the slaughter of eighteen horses. No glanders was reported in any of the other provinces. This disease is controlled by a policy of slaughter of infected animals and payment of compensation.

Hog Cholera.—No extensive outbreak of this disease has occurred although the disease was detected in Quebec, Ontario and British Columbia. Hog cholera is controlled by a policy of slaughter of infected hogs and payment of compensation and the use of anti-hog cholera serum to immunize all swine in close proximity to infected premises.

Mange.—Fewer outbreaks of mange in cattle have occurred and only limited outbreaks have been reported in Ontario, Manitoba, Saskatchewan and Alberta. The number of cattle involved as contacts are comparatively few.

Mange in horses has been reported only in New Brunswick.

Sheep Scab.—No case of sheep scab has been reported in the Dominion for the past two years.

Anthrax.—Three cases of anthrax were confirmed in Ontario and one outbreak occurred in Quebec. This disease is not prevalent in Canada and care is taken to prevent its introduction by means of hides, wool and hair from infected countries. These, unless properly certified, only enter under restrictions to be disinfected at destination.

Dourine.—No case of this disease has been detected in Canada during the past ten years.

Rabies.—This disease has occurred only in Quebec and Ontario. It has been controlled by individual quarantines placed on all contacts and possible contacts and it has not been necessary to quarantine any area. In all outbreaks the co-operation of municipal councils is sought with a view to having local by-laws passed and enforced restricting the movement of dogs.

Tuberculosis.—Considerable progress is being made in the control of tuberculosis. The demand for the tuberculin test of cattle under our different policies is greater than can be promptly met and our progress is limited by the number of veterinary inspectors available and the expenditure incurred.

Accredited Herds.—There are 4,653 fully accredited herds in Canada; 1,295 herds are undergoing accreditation and 149 are awaiting test.

Supervised Herds.—There are 1,530 herds tested under this plan. Stock-owners who cannot comply with the requirements of the accredited herd plan can take advantage of the supervised herd plan but no compensation is paid for reacting cattle. When a restricted area is established supervised herds are absorbed under the restricted area plan.

Municipal Tuberculosis Order.—Supervision is still maintained over the herds supplying milk to twenty-seven municipalities under this order, but no new municipalities have been accepted since October, 1923. Two municipalities have been included in restricted areas and one has been dropped from the list as the municipality did not enforce its by-law.

Restricted Areas.—The advantage of testing all cattle in areas established for the eradication of bovine tuberculosis is recognized by live stock men and

the area plan continues to gain favour. This plan is the most practical and economic method of controlling tuberculosis as the greatest number of cattle can be tested and permanent progress can be made because all cattle within the area are under supervision. The shipment of reactors in car lots can be arranged more cheaply and so the expense to the owner is reduced.

More effective control can be maintained over the cattle in areas as the movement of cattle into an area is governed by regulations. The owner has a greater feeling of security with the knowledge that all his neighbours' cattle have also been tested. Breeding operations are facilitated between herds of equal health status and the services of valuable herd sires become available with a tendency to eliminate the scrub bull.

All cattle for entry into restricted areas, except those for immediate slaughter on approved premises, must be accompanied by a satisfactory tuberculin test chart.

The cattle in the following new areas have been tested during the past year:—

An extension of the Last Mountain area in Saskatchewan in which 16,674 cattle were tested with 1.2 per cent of reactors.

The municipality of Portage la Prairie in Manitoba had 11,076 cattle with 7.2 per cent of infection.

The municipality of Stanley, also in Manitoba, with 8,385 cattle had only 2.5 per cent of tuberculosis.

Progress in the area in Ontario bounded by the St. Lawrence river, the Ottawa river and Rideau canal is being made and the counties of Prescott and Glengarry are nearly completed. In Prescott 26,752 cattle tested had 3.58 per cent of reactors while in Glengarry 23,161 cattle had 4.1 per cent of reactors.

In Quebec the Montreal Island area in which 12,245 cattle were tested had 21.2 per cent reactors.

The initial test on cattle in that portion of Richmond county west of the St. Francis river which is included in a restricted area has been completed; 8,123 cattle tested had 20.0 per cent of reactors. The cattle in small areas in the southern portions of the counties of Drummond and Bagot have been tested. In Drummond 2,149 cattle had 12.1 per cent of infection and in Bagot 818 cattle tested with 5.6 per cent of reactors.

Retests have been conducted on the cattle in the following areas:—

Fraser Valley area in British Columbia with over 51,000 cattle. Infection has now been reduced to 0.37 per cent.

The Last Mountain area in Saskatchewan with 18,150 cattle had only 0.04 per cent of infection.

The Carman area in Manitoba had 19,406 cattle retested with 1.2 per cent reactors.

In Quebec the retests of the Huntingdon area with 62,545 cattle show infection has been reduced to 0.4 per cent. The Huntingdon Extension with 49,810 cattle has been reduced to 1.4 per cent of infection. The counties of Mississquoi, Iberville and Brome with 62,626 cattle had tuberculosis reduced to 0.85 per cent, while the counties of Rouville, Shefford and portions of Stanstead and Sherbrooke west of the St. Francis river with over 57,000 cattle tested was reduced to 0.83.

All cattle in the province of Prince Edward Island (96,554) were retested and only 0.15 per cent of tuberculosis found.

Infectious Abortion of Cattle.—Only twenty-six herds have taken advantage of the assistance offered by the Department in conducting blood tests of herds. The owner is required to sign an agreement that no cattle reacting to the blood test for infectious abortion may be disposed of except for slaughter.

unless the purchaser is aware that the animal is a reactor to the blood test for abortion. The owner is required to employ a veterinarian to take specimens of blood from his cattle and forward them to one of our laboratories for test.

Inspection of Stock Cars and Yards.—Inspectors are maintained at thirty-one railway centres and all stock cars arriving at or passing through these points are disinfected unless they show evidence of having been so treated. The cleansing and disinfection of stockyards and stock cars is carried out under the supervision of inspectors. Cars which have conveyed hides, wool or other products under restrictions are cleansed and disinfected under supervision before being used for any other purpose. Only approved disinfectants in proper strength of solution are used in this work.

PATHOLOGICAL DIVISION

ANIMAL DISEASES RESEARCH INSTITUTE

Research activities and routine laboratory services have continued to multiply throughout the Division and have made satisfactory progress.

Contributions from the Animal Diseases Research Institute, especially those relating to tuberculosis, brucelliasis (infectious abortion, undulant fever) and problems of major importance are receiving recognition and attracting wide attention.

It is gratifying to report that scientists and health officials from Great Britain, the Dominions, and many foreign countries are visiting our laboratories to confer with our research officers on problems of universal interest and importance. The close relationship between many animal and human infections is better recognized and understood; contacts between workers, exchanges and bureaux of scientific information and lines of co-operation have been established; and with the application of modern methods of research will lead to new knowledge and progress in the development of disease prevention.

TUBERCULOSIS RESEARCH

The tubercle bacillus, in its many varieties and intermediary forms and in its biology and evolution in the different mammalian and avian species, offers an unlimited field of research. Tolerance, immunity and prophylactic vaccination, sources of infection, transmission, diagnosis and prevention are problems requiring continuous study and experimentation.

"B.C.G." Vaccination.—Prophylactic vaccination against bovine tuberculosis by means of BCG as advocated by the Pasteur Institute, France, has continued as a major study since 1924. The department has co-operated with the National Research Council and other institutions in Canada in this important investigation. Our own experiments involve approximately 200 head of cattle. Several interim reports have been published, as the work progressed; a final report cannot be made until a sufficient number of the experimental animals, vaccinated as calves, have reached maturity. Nevertheless, the experimental evidence so far obtained is distinctly unfavourable. The majority of the animals killed at different stages of the investigation have shown evidence of tuberculosis infection to a varying degree; and the animals which appeared to enjoy a temporary resistance to progressive disease are proving, for the most part, to be carriers and spreaders of virulent infection. With the knowledge at present available BCG vaccination of cattle could not be justified in Canada, and, in fact, is distinctly contra-indicated.

Avian Tuberculosis.—The study of avian varieties of tubercle bacilli and the forms of tuberculosis which they are capable of producing in poultry, swine and other animals is continuing. The problem is a very involved one, the

type, pathogenicity and virulence of the different strains of tubercle bacilli, as well as the susceptibility in different mammalian and avian species, varying very widely. The discovery made at our Institute that the common crow is a frequent carrier of tubercle bacilli pathogenic for poultry, swine and other animals, has considerable significance as regards sources of infection.

BOVINE INFECTIOUS ABORTION

Herd owners desiring to build up a herd free from abortion infection, under certain conditions and a special form of agreement, can now have their animals tested. Under the plans advocated, satisfactory results have been obtained on the Dominion Experimental Farms where the methods were first tried out.

It cannot be expected that the measures necessary to free a herd from abortion infection can be applied without inconvenience and in some cases considerable loss and expense. However, it is becoming recognized that without the intelligent application of control measures the losses are apt to be so great as to make cattle raising unprofitable.

Applications received for herd testing are increasing rapidly, and it is evident that stock owners are prepared to go to some sacrifice in order to maintain their herds free from this infection.

An increasing number of cases of Undulant Fever in man are being traced to cattle as the source of infection.

Our experimental studies have shown that the udder is the principal reservoir of infection in the bovine animal, and that the milk from reacting animals is the dangerous source of dissemination.

SWAMP FEVER OF HORSES (INFECTIOUS EQUINE ANAEMIA) IN THE WESTERN PROVINCES

This disease is principally confined to certain districts in the western provinces. Although death frequently results from swamp fever infection, many horses recover from it, but retain the virus in their systems for indefinite periods and thus act as reservoirs and sources of infection which serve to perpetuate the disease. The studies and experiments carried on at the Research Station, Lethbridge, Alta., since 1912, have furnished much valuable information, but the true nature of the virus and its natural mode of transmission from animal to animal is still unknown.

Further efforts and an intensive study are now recommencing and plans are under way to establish a field experiment station in one of the typical swamp fever areas where investigations will be conducted this coming Season with the object of determining the cause and mode of transmission and developing an efficient method of control and preventive treatment.

"RED WATER" OF CATTLE (BOVINE HAEMETURIA) IN BRITISH COLUMBIA

Further investigation of "Red Water" disease of cattle in British Columbia has been undertaken by the Pathological Division (Health of Animals Branch) and the Chemical Division (Experimental Farms Branch), working in co-operation.

A detailed survey of the Red Water Farms and Districts principally in the Fraser Valley, was made in the month of June, and all information possible relative to the incidence of the disease and the conditions under which it occurs, was collected. Studies are being made of the chemical composition and pathological changes of the blood and body fluids of affected and normal animals, and of the hay and soil on affected farms.

ROUTINE LABORATORY SERVICES

Tuberculin Manufacture.—Two million two hundred and eighty-seven thousand one hundred and ninety test doses of tuberculin have been prepared and issued as required in the work of tuberculosis eradication. The commercial value of this laboratory product, in the amount issued, exceeds \$100,000.

Diagnoses and Pathological Reports.—Fourteen thousand seven hundred and fifty-four specimens and samples have been received and dealt with. These include—

164 microscopical examinations for rabies;

9,702 serological tests for infectious abortion and bacillary white diarrhoea;

433 bacteriological examinations of canned foods;

4,455 pathological, bacteriological and parasitological examinations.

MEAT AND CANNED FOODS DIVISION

The total number of animals slaughtered under inspection shows a decrease from the preceding year. In cattle and sheep, there was an increase of approximately four thousand head in the former and of one hundred and fifteen thousand in the latter, while hogs show a decrease of two hundred and twenty-seven thousand.

This is unfortunate and somewhat difficult to understand, more particularly when such rapid strides are being made in the improvement of the bacon breeds. This improvement has materially strengthened the position of Canadian Bacon on the British Market, with the result that the prices which are obtained compare very favourably with those paid for Danish bacon, which has been our keenest competitor.

The work of inspection itself has made progress. An increasing demand for meats marked "Canada Approved" is quite noticeable. As the consuming public become further educated as to the necessity for a sound, wholesome meat supply, this demand will still further make itself felt.

The packing plants have almost, without exception, been maintained in a very satisfactory condition. Many improvements in equipment have been made and the old fashioned methods of slaughter and handling of meat foods are fast disappearing. The care and attention given to the manufacture and distribution of meat leaves little to be desired.

During the year there was no increase in the number of plants operating under the provisions of the Meat and Canned Foods Act. There were, however, many enquiries as to the possibilities of granting inspection. These requests were investigated and detailed reports furnished, as to what was required before such requests could be granted.

In view of the growing demand in foreign countries for the flesh of horses to be used as human food, and the necessity for inspection to obtain such markets, an addition to our present regulations became necessary.

An Order in Council was therefore passed bringing Horse Meat under the Act. Special Regulations were also approved, which ensures that the export of this class of meat food will be permitted only under similar inspection and restrictions as apply to other meat foods.

Detailed statistics covering the work of this Division will appear in the report of the Veterinary Director General.

LIVE STOCK BRANCH

HORSE DIVISION

During the fiscal year just closed the horse market has been quite active, the demand being considerably keener than during the previous year, and which demand has continued to increase for the first six months of this year. During the calendar year 1929, Ontario brought upwards of 16,000 horses from the western provinces, while Quebec took a like number and the Maritime Provinces approximately 5,000, making a total of upwards of 37,000 for the year. This has resulted in considerable activity as regards horse breeding in the five eastern provinces, and consequently there are more colts in the country this spring than at any time for the last half dozen years. The Federal-Provincial Policy in aid of Horse Breeding, between each of the eastern provinces and the Live Stock Branch, by which a grant on a fifty-fifty basis is paid by the Live Stock Branch and each province, to the owners of stallions that pass inspection and that comply with certain requirements, has also done much to encourage the Eastern farmers to raise more horses.

The breeding of saddlers, hunters, and horses of that type, also polo ponies, is yearly receiving more attention, due to the steady demand at good prices for horses of this type. The breeding of good, big Hunters, gives the farmers more than one market as a hunter also makes a police, fire or remount horse. He is also a splendid delivery horse and likewise useful for farm work.

Transportation companies complain of a shortage of draughters, 1,700 pounds and upwards, for which kind they are ever ready to pay high prices. There has also been a good trade in the other types for city and lumber woods use. The demand for the various types of horses mentioned above bids fair to continue as over 16,000 western horses have been absorbed by the east during the first six months of this year, in addition to some thousands that have changed hands and that were bred in the east.

CLUBS

Horse Clubs are now confined entirely to the Prairie Provinces. The number last year was slightly larger than previously. Accordingly there was a keen demand for good stallions. Our Club Policy in addition to paying one-third of the service fees also protects the breeders, in that through careful inspection by officers of this department, only good specimens that are free from hereditary unsoundness can be hired by clubs. Thus a member knows that the club stallion he is using is sound, and of good conformation and likely to improve his horse stock. Another feature of the policy is that a district has to continue from year to year to use the same breed of stallion. Accordingly in a few years, a distinct type of horse is common in the district, which makes for improvement. The policy, however, is not one sided, as it has proven of undoubted benefit to the stallion owners. In the first place a club must guarantee the owner a definite number of mares; secondly, it must pay him one-third of the service fee at the end of the service season, without any trouble to himself in the way of collecting; and thirdly, the Club must pay the remaining two-thirds of the service fees on every mare that is in foal. Thus the stallion owner is assured of a fair return on his investment and sufficient money at the end of the service season to meet current expenses. In this way the owner of a good horse is encouraged and protected. This scheme has proven particularly popular in the Prairie Provinces where the farmers have learned the value of co-operation amongst themselves.

BREEDING STATIONS

During the year the various breeding stations carried on successfully. In the aggregate more mares were bred than any previous year. The steady demand for hunters, saddlers, police remount and light delivery horses has made the big thoroughbred sire a most popular horse. The chief difficulty in extending the work at the present time is due to the fact that there is only a limited number of these stallions of the cross-country hunter type in the country and also to the price at which such stallions are held in Great Britain where the Hunter Society and the War Office are, between them, awarding a premium to all suitable horses, while in the Irish Free State, the Government is encouraging the use of the hunter thoroughbred in the production of the world famous Irish hunter horse. Canadians from time to time import a few Irish hunters owing to the scarcity of this type in Canada, although the Canadian breeder can and has raised some equally good horses. The difficulty has been that the demand far exceeds the supply; in fact breeding station districts have been combed over to such an extent that there is scarcely a suitable hunter prospect available, and unfortunately the majority of the good young mares have been sold owing to the high prices the buyers were willing to pay. During the year, in one of the station districts several carloads of likely prospects from which to make good hunters were shipped to the United States at prices which yielded the breeders very good returns. Had these colts been schooled they would have brought one hundred per cent more on the average, while the outstanding ones would have been worth at least four figures.

THE HUNTER, SADDLE AND LIGHT HORSE IMPROVEMENT SOCIETY

This society was organized about four years ago and has since devoted its attention to the breeding and improvement of the hunter horse particularly, and has opened a Stud Book for the registration of foundation mares, and already in the neighbourhood of 1,000 have been enrolled. The headquarters are in Toronto, but branches have been formed in the western provinces, and it stands ready to help in any or all provinces just as soon as the breeders of a province are willing to join in the work. The society is also doing work in the way of encouraging the breeding and showing of suitable young horses by offering prizes at various fairs in districts where the number of colts of the right type warrant. This Department in addition to the yearly grant also aids the society in its work by furnishing one inspector to work with any provincial Inspector when examining foundation mares for the Stud Book. The Hunter Society has done much useful work in interesting horse lovers throughout the country and in helping advertise the possibilities in breeding this type of horse. A very generous grant is made yearly through the Live Stock Branch of this Department to the Hunter Society to help in carrying on the work.

FEDERAL-PROVINCIAL ASSISTANCE TO HORSE BREEDING

This policy is in force in the five eastern provinces. In brief the Dominion Live Stock Branch and the provinces in each case have united in making a grant to owners of sound, individually excellent stallions, that possess size, quality and conformation. All such stallions are inspected by a board composed of federal and provincial inspectors, and the grant is awarded according to the number of mares left in foal, but in no case exceeds \$300 per horse. Fifty per cent of each grant is paid by the federal Live Stock Branch and fifty per cent by the province in question. This policy is doing much to encourage horse breeding.

SPECIAL GRANTS

During the year a special grant was made to Horse Classes at the International Ploughing Match, which proved to be particularly popular and was the means of bringing out better horses and equipment. Grants were also made to a number of horse parades at each of which some hundreds of horses were shown. These parades have done much to encourage not only the owners, but the teamsters to take better care of their horses throughout the year, while thousands of people turn out to see the parade go by, showing that there is still a human interest in man's old friend, the horse. The usual grants for Get of Sire, and Commercial Classes at the various winter fairs, were also offered. The exhibits were uniformly good, but particular mention might be made of the Guelph Get of Sire Class, which was one of the outstanding features of the show. A number of grants to Colt Shows were also made, while a new class was inaugurated and tried out, viz., a "Boy's Horsemanship Class." The first show was particularly successful and it is hoped this class will become part of all winter fairs.

FUR FARMING

The success of any business lies in the market demand. It might have been expected that under the present world-wide financial conditions the fur market would suffer heavily. For some reason, however, this has not been the case, as good furs, even at the late winter sales, brought fair prices. From this it would appear that furs are considered more or less of a necessity, particularly in the northern countries.

Fox.—Fur farming is yearly becoming more popular as shown by the increase in the number of people who have taken up the breeding of fur-bearing animals as a business. At the present time the number of silver fox ranches outnumbers all others. The raising of blue foxes, however, is now steadily gaining ground, particularly on the west coast. One of the claims made by the breeders of the blue fox is that the litters are large, containing generally speaking from eight to ten pups and not difficult to raise. Fashion in furs changes from year to year, and now the blue fox is becoming quite fashionable, as high as \$225 having been paid for a good raw pelt. The pelt of the cross fox is also popular, owing no doubt to the fact that a good skin is very beautiful and is somewhat rare, as up to the present time fox men have confined their attention almost wholly to raising the silver fox. Now, however, that a goodly supply of silver pelts is yearly going to market, some of the far sighted breeders are mating a silver dog fox to a good red female, or vice versa, in order to produce a cross pelt.

Mink.—Mink farming during the year has continued to increase. There was a good demand for breeding stock at comparatively speaking high prices in Canada. There was also a foreign demand for hundreds of breeding animals which netted the breeder a good return on investment. Pelts brought a very fair price on the market, as high as \$70 being paid for a single skin. Mink, unlike some of the other fur bearers, thrive exceptionally well in captivity and become quite tame. They can be raised with a minimum amount of trouble.

Muskrat.—Muskrat raising, particularly by fencing in a small lake surrounded by marsh land, well stocked with such plants as water lilies, flags, wild rice, and cattails is becoming common. It has also been found that muskrats can be raised satisfactorily on dry land. Owing to the fact that they raise three large litters a year, they multiply very rapidly and bring good returns on investment. There is always a market for the fur and also a good demand for breeders at fair prices. During the year, several fairly large shipments of muskrats went to Europe. It is also reported that a number went to the United States.

Marten.—Up to the present only a few marten have been raised in captivity. This is due first to the fact that breeding stock is difficult to secure and secondly that marten do not take so kindly to domestic conditions as other fur bearers, particularly the mink. Last year a breeder at Ingersoll succeeded in raising eighteen young marten. This to date is the largest number reported as having been born and reared in any one ranch. Undoubtedly this success which has been given wide publicity will do much to encourage other parties to give more attention to marten breeding.

Other Fur Bearers.—Other fur bearers, such as beaver, fisher, skunk, raccoon, badger, and even coyotes are being successfully raised and the number of breeders is slowly but nevertheless yearly increasing. A year or so ago a Fitch Farm was established in Canada and according to latest reports, the venture has been successful, as the ranch owner is now offering some of these little animals for sale. The Canadian climate is particularly suitable for fur raising. There is also a sufficient supply of cheap food. These coupled with the steadily growing world demand and comparatively high prices for furs will undoubtedly be the means of yearly increasing the number of people that take up the raising of fur bearers as a life work. Comparatively speaking only a few years have gone by since it was claimed that foxes could not be domesticated. Now it has been found that even better fur can be produced in captivity. Undoubtedly another quarter of a century will show the same to be true in the case of various other fur bearers.

CATTLE DIVISION

GRADING AND BRANDING OF BEEF FOR THE DOMESTIC MARKET

Regulations under the Live Stock and Live Stock Products Act providing for the establishment of a Beef Grading Service were passed by Council in February, 1929, and the necessary inspection staff has since been appointed. The larger packing concerns having indicated their willingness to brand top quality beef in accordance with the regulations, the service was made effective September 23.

This new service embodies the principles which were recommended by the Joint Beef Committee appointed by the National Beef Conference which was called by the Department at Winnipeg in June, 1928, at which producers' organizations, Dominion and provincial Departments of Agriculture, the packing industry and the retail meat trade were represented.

The system is inaugurated on a voluntary basis and is limited to beef which has been federally inspected from the health standpoint. The actual grading and branding is done by employees of the establishments concerned, but continuous supervision is exercised by officers of the Department to ensure that the prescribed standards of quality are adhered to.

Only top quality beef is branded under the two grades, "Choice" and "Good." The grade "Choice" is in all cases designated by a red brand in the form of two ribbon-like marks running from end to end of the carcass. This grade is necessarily somewhat limited in volume, and represents the product of particularly high class, well-finished cattle. The grade "Good" is marked similarly to the "Choice" grade, except that the colour of the brand is blue instead of red. Beef of this grade is in greater supply than that of the "Choice" grade, but will include only beef which can be safely recommended as of good eating quality. Establishments are permitted to sell these two grades under their own trade brands but the brands of all establishments must be imprinted in red for the grade "Choice" and in blue for the grade "Good."

The effect of this service should be to give to the product of well-bred, properly finished young cattle the recognition which it has long deserved in the domestic retail meat trade. If it is to be of full benefit to the producer, however, the supply of the right kind of cattle to meet the requirements of our home market must keep pace with the demand for graded beef. The light-weight carcass weighing within a range of 450 to 550 pounds, but preferably under 500 pounds, is the one which finds the most ready sale in the Canadian trade to-day. While beef grading may possibly help to develop a keener appreciation among consumers of the superior flavour of the heavier carcass from the more mature animal, the widest demand for some time will undoubtedly be for the product of animals weighing not over 1,050 pounds at the time of slaughter.

To take full advantage of this outlet, cattle must naturally be finished as yearlings. This does not imply baby beef production as ordinarily understood, but does imply carrying the young animal forward to the finished stage without allowing loss of natural flesh at any stage of its development. Through producers' organizations and provincial Departments of Agriculture, steps are being undertaken to organize beef production campaigns throughout the country, in which will be emphasized the importance to producers of studying carefully how they may most economically convert their practice to one of feeding out a larger percentage of breedy young cattle as yearlings. To the degree to which this can be successfully accomplished, producers will improve their position in finding the broadest outlet for their finished product not only in the domestic but also in export markets.

BOYS' CATTLE BREEDING CLUB POLICY

This policy, which was inaugurated in 1921, is at present conducted in conjunction with the provincial departments of the five eastern provinces. Some of the western provinces are, however, becoming interested and further extension of the work in that direction in the course of the next year is probable.

Experience with club work has demonstrated that the average member rapidly arrives at a stage where a capacity is revealed for enterprises beyond the scope of ordinary club activities. The valuable training and experience which the boys secure in the feeding, showing and judging of live stock, in financing and business methods, and in the keeping of accurate records of feed costs and production, awaken ambitions which demand new spheres of action. These aspirations have found expression in various directions—herds have been materially increased, where in many cases the club heifers marked the introduction of pure-bred cattle into a district, that district has since established a reputation as a centre for a particular breed, trade in pure-bred cattle has been greatly stimulated, Record of Performance, Cow Testing, Accreditation and similar advanced movements have been readily adopted, and, in short, more scientific methods of agriculture have been universally employed and farm life in general has been elevated to a much higher plane.

In addition to the club competitions and the special classes at provincial fairs which have meant so much in every way to club members, the Canadian National Railways now furnishes annually to winning teams of Breeding Club and Calf Feeding Club members from each province a free trip to the Royal Agricultural Winter Fair where an Interprovincial Championship Competition is held. As a climax to the club work of the season, this has proved to be a most eventful experience to competing teams. An additional stimulus was provided at the last competition at the Royal by the selection there of a team of three members to represent Canada at an International Judging Competition to be held at the Royal Show in England in June, 1930.

CALF FEEDING CLUB POLICY

From a modest beginning in 1922, the Calf Club Policy administered and supported jointly by the Dominion and the Provincial Department of Agriculture

concerned has been rapidly expanded. While the work is as yet limited to Quebec and the three Maritime Provinces, upwards of 150 clubs were in operation in 1929 with a total membership of over 3,000 boys and girls.

The policy provides a valuable instrument for kindling interest in, and implanting knowledge of the fundamental principles of correct cattle feeding and management. In addition to the more direct benefits which the club members derive in the way of financial rewards, knowledge of the various phases of live stock husbandry, fitting and showing, etc., the members soon display a desire and capacity for extending their interests and energies to more advanced activities. Consequently, in order to keep pace with this development and demand, it has been necessary from time to time to enlarge the scope of the policy. As at present constituted, the policy provides for continuing a club for three years, the original calf being supplemented each year by a calf of the current season, and classes for the various ages included in the prize list. It is further provided that where Cow Testing Associations embracing all the herds in the club are organized, a competition will be held the fourth year. It is also the intention to graduate clubs which have shown proper interest and progress into Boys' Cattle Breeding Clubs and thus afford the members an opportunity to capitalize and apply to the raising of pure-bred stock the knowledge and experience they have acquired in Calf Feeding Club work.

ADVANCED REGISTRATION OF DAILY BULLS

Certificates of Advanced Registration have been issued for upwards of 1,400 bulls since this service was established in the spring of 1925. While this number may not seem large in relation to the total number of pure-bred bulls annually produced, it should be remembered that only bulls which have R.O.P. credentials on both sides of their ancestry are eligible and that a bull must pass a rigid inspection as regards type before being admitted.

Five breed associations contribute to the support of the system as carried on by the Dairy Cattle Committee—Ayrshire, Jersey, Guernsey, French Canadian and Red Poll. A similar system is administered by the Holstein-Friesian Association of Canada through its own office.

The chief value to the industry of Advanced Registration lies in the effective manner in which it focusses the attention of dairymen upon the importance of combining desirable type with recognized production credentials in the sires used in commercial as well as in pure-bred herds. The effect on the quality and productive capacity of herds into which such bulls have been introduced is already becoming apparent.

In the five years since the system was organized it has been demonstrated that large breeders as well as small take pride in having A.R. sires at the head of their herds. In facilitating the sale of young bulls, Advanced Registration has proved of special benefit to small breeders. They, as well as large breeders, have capitalized the assurance of satisfaction inspired by A.R. credentials to good advantage in increasing their mail order business. At the same time, buyers have been saved the expense of personally inspecting a number of bulls before making a selection, and have, therefore, been better able to afford the price of a worthwhile sire.

RECORD OF PERFORMANCE FOR PURE-BRED DAIRY CATTLE

The value of tests for full milking periods is now firmly established, and breeders of pure-bred dairy cattle in all parts of the Dominion, where dairying is carried on, depend on the Record of Performance to furnish them with reliable information as to where stock from ancestry with known production records may be obtained.

The esteem in which the Record of Performance is held may be judged by the steady increase in the work since its inception. During the past year, 10,282 cows have been entered for test. This is a 500 per cent increase over the number entered in the year 1920.

The following is a summary of the number of cows entered in the Record of Performance during the past year and the number of certificates issued for bulls and cows during the same period, also the number of certificates issued since the inauguration of the Record of Performance.

COW TESTING SERVICE

Through this service, provision is made for the keeping of records of the milk and butterfat production of cows in grade dairy herds in any district in the provinces of Alberta, Manitoba, New Brunswick, Nova Scotia, Prince Edward Island and Quebec. These records furnish evidence for dairymen on the important factor of cost of production, and permit them to study their problem from a breeding, feeding and weeding viewpoint.

The results for the year 1929 were encouraging. There was an increased demand for the service, and a keen interest was taken by the majority of Cow Testing members.

Each year many of the unprofitable cows were disposed of for beef, and there is a continuous demand from members of the several Cow Testing organizations for bulls and heifers from sires and dams of known production. Feeds, suitable crops and cropping systems are receiving more attention, and cows recorded are being milked longer periods each year.

During the calendar year 1929 Cow Testing Service work was conducted in six provinces. Two hundred and five Cow Testing associations were organized with a total of 2,752 herds, including 25,365 cows recorded.

Province	Promoters	Associations	Herds	Cows

	17	205	2,742	25,365

COW TESTING REGISTER

This special feature of the Cow Testing Policy gives recognition to the best cows in the herd. The service is available to a limited number of herd-owners in districts in which Cow Testing associations are organized, for which an entry fee of \$10 per annum is charged by the Branch for each herd entered. The inspector gives close attention to the details of recording, sampling and testing, and each cow reaching a standard of 6,000 pounds milk and 300 pounds butterfat in twelve consecutive months is issued a production certificate.

A total of 122 cows were entered in 1929. Four cows have been awarded their third certificates, four have received two certificates, and eight have qualified for the first time during the year.

POULTRY DIVISION

Considered as a whole, the general prosperity which has attended the poultry industry during recent years was apparent throughout the year 1929. This was much more in evidence during the late spring, summer and fall months than during the winter. The phenomally mild weather of December, 1928, and early January, 1929, precipitated almost spring production, with the result that the producing areas of Western Canada commenced their carlot movement two months or more earlier than usual. This condition naturally reacted against the obtaining of the usual remunerative prices for winter eggs and for a short time the situation was really disconcerting to both producers and dealers alike.

So brisk, however, was consumptive demand during the summer months that for the first time in the history of Canada storage eggs were called upon to meet current demand in the month of July, and while the outward movement was not to say large, as compared with the fall months, it was a distinct innovation in the matter of egg and poultry markets. The early movement of storage once started gained very considerable momentum and each month showed a larger outward movement, until in November more eggs were moved out and into consumption than were left in storage on the first of December. By the turn of the year, eggs in Montreal, particularly storage eggs, were shorter in volume than in the experience of the oldest members of the trade.

Per capita consumption of eggs in Canada during the year again showed an increase amounting during 1929 to 30.87 dozen per capita as against 30.65 for 1928.

Imports during the fiscal year 1928-29 showed a slight falling off; exports, a slight increase, this being mainly brought about by the movement of eggs from British Columbia to Great Britain by means of the Panama canal. It is reported, however, that some of the most profitable business transactions in eggs on the

part of British importers were their sales in Canada of eggs originally intended for shipment to Great Britain, but which were disposed of here without ever having been shipped.

One of the more outstanding features of the year with regard to eggs was the growing conviction that the cause of a good deal of the lower quality apparent at time of grading is due to the conditions affecting production rather more than what happens to an egg between the time it is laid and is brought before the light for grading.

In poultry, prices were fair during the summer months, this trade being materially helped by the tourist demand and extent to which chicken dinners are being featured generally. The first sales of poultry in the fall of the year brought very satisfactory returns but in the congestion that occurred in the heavy marketings just before Christmas prices rather lower than the average of the last few years were maintained. This no doubt was partly brought about by the general financial situation and curtailed buying power of the public. An encouraging feature, however, has been the apparent and growing tendency on the part of the consuming public to pay a real premium for well grown, properly finished and well dressed poultry. In this preference for quality lies the greatest opportunity for those producers who are really anxious to make their poultry keeping remunerative.

EGG INSPECTION

The advantages of standardization as relating to a particular agricultural product have been equally as noted during the last year as has been previously mentioned. Egg consumption has again shown satisfactory increase and Canada continues to lead the world in per capita consumption of eggs by a wide margin. The most notable factor during the year has been the passing under "The Live Stock and Live Stock Products Act" of amendments to the egg regulations, which are now effective in all provinces excepting Ontario and Quebec. In these amendments little or no change has been made in that part of the regulations covering the sale of the graded product. In principle no change has been made as covering the graded return to the producer, but the need of considerable change has been apparent for some time in the way of an effective check-up on the graded return.

In all of the promotional work behind egg grading the whole object has been to secure for the careful producer that premium for quality which the consumer has shown his willingness to pay. Steadily the differential between the grades has increased. At one time last fall in Montreal the differential between "Extras" and "Seconds" was no less than 24 cents a dozen, the price for "Firsts" being about half way in between. The differential existing in the grades of eggs to-day is such as of itself alone to insure a good profit to the producer of high grade eggs as compared to low.

It is a comparatively simple matter to check up in a matter of sale the quality of eggs offered for sale against the definition for that grade as appearing in the standards. The eggs either are or are not as represented. On the other hand the difficulties surrounding a similar adequate check on the return of the differential to the deserving producer present great problems in an administrative way. It is the return of money that is to be checked and an inspector needs not only to have a knowledge of eggs but to be an accountant and a detective as well. In other words, the interchange of money is far more difficult to check than is the interchange of product.

The inspection work throughout the year was very heavy, the increased call for inspections, both for interprovincial and local trading, being considerably in excess of any previous year.

The following is a statement of the work of the inspection service for the twelve months ending 1928 and 1929:—

TABLE No. I—COMPARATIVE STATEMENT OF EXPORT, INTERPROVINCIAL AND LOCAL INSPECTIONS

COMPARATIVE STATEMENT OF IMPORTS

	Number of inspections	Number of cases
1928.....	234	32,949
1929.....	237	22,491 $\frac{1}{2}$

TABLE No. VI—TOTAL INSPECTIONS, 1929

	Inspections	Cases
Import.....	237	22,491 $\frac{1}{2}$
Export.....	402	40,648
Interprovincial.....	3,729	492,404
Intraprovincial.....	1,595	128,710
	5,963	684,253 $\frac{1}{2}$

These tables show some increase in exports, a useful reduction in imports, a big increase in interprovincial and intraprovincial shipments and approximately twenty per cent increase in the total quantity of eggs inspected throughout the year. In addition to the regular work of inspection by approval, the inspection staff makes approximately thirty thousand calls upon retailers and wholesalers for the purpose of checking up outgoing shipments. The number of prosecutions during the year was not as large as in previous years.

The current problem in connection with egg inspection is to obtain properly qualified men at the existing Civil Service classification. While there have been a number of applicants for the positions who have taken the Civil Service examination, only one candidate outside of men already in the employ of the Department has been successful in the last two examinations that have been held, the cost of holding the examinations being out of all proportion to the number of men obtained.

CO-OPERATIVE MARKETING AND POULTRY PROMOTION

The really outstanding achievement today in co-operative egg and poultry marketing is the Canadian Poultry Pool which acts as sales agent for the egg and poultry co-operatives of the four western provinces. This development has largely been brought about by the success that attended the organization of the Manitoba Co-operative, with which was affiliated the Saskatchewan Co-operative under the name of the Canadian Poultry Pool. The British Columbia Pool was organized in the winter of 1928-9 and commenced shipment the next spring. About the same time also the Alberta Co-operative joined the Pool.

Officers of the Promoter Service have largely been responsible for the inception of co-operative egg and poultry marketing in Canada. The pools, however, today have become so large in a business way and so well developed that they are now to a large extent taking over their own organization work, naturally, however, with the good will and support of the department, in fact such development on their part is simply the fullest consummation of the plan in mind at the outset.

During the year officers of the Promoter Service have been active in the introduction of the Dressed Poultry Standards. This service, together with the Chief Poultry Inspector and the assistance of other officers of the Branch, has been largely responsible for the introduction of the standards into commercial practice.

Live poultry carlot shipment has also been continued, this activity, however, in the better organized districts being taken over entirely by the co-operatives.

An important phase of the work in the past year has been the Hatchery Approval Policy and the inspection work covering the flocks supplying eggs to the hatcheries.

In a word, the Promoter Service through their thorough knowledge of conditions and public opinion in their respective territories on the one hand, interpret to the Department the needs of those territories, and on the other hand carry back and interpret to those territories departmental policies devised to meet those needs.

DRESSED POULTRY INSPECTION

It is hoped that it will be possible to bring under the purview of the Dressed Poultry Regulations, made effective in the fall of 1928, the greater part of dressed poultry marketed in Canada on a purely voluntary basis, and without making the regulations compulsory. There was a steady increase in the call of inspection on carlots handled during the summer, and during the fall and early winter the amount inspected was about three million pounds. The regulations provide the standards for trading and set forth the manner in which inspection shall be made when requests are received. The only mandatory feature included is the state-

ment to the effect that when the grade names and standards terms defined in the regulations are used and marked on the container, the quality of the poultry contained therein shall be as represented. Possibly the biggest factor in making the regulations effective is their adoption this year by the Canadian Poultry Pool, representing as they will a very considerable part of the poultry marketed from the western provinces.

Probably in Canada there is no more complete illustration of where the producers by their own effort complete the full operation of killing, dressing and handling the live stock product than is the case in the instance of the Co-operative Associations in the west. There the co-operative producers by their own labour not only kill and dress, but weigh, pack and load their poultry in carloads in such a manner and with such a degree of efficiency, that the poultry moves right through all the channels of trade without anyone having to go to the expense of even lifting the lid of a case. All this poultry is packed under Government inspection, by arrangement with the co-operatives, there being an Inspector present at each loading point who observes the quality of the birds going into the boxes, and who, after the cases have been properly marked, places thereon the Government mark of approval.

The principle of poultry inspection has been endorsed widely by the Produce Sections of the Boards of Trade throughout the Dominion, and the endeavour is in a short time to make the certificate covering a car of poultry of just as great commercial significance and value as a certificate covering a car of eggs.

TURKEY APPROVAL POLICY

Both directly in some provinces and in co-operation with provincial departments in others, very considerable development has taken place under this policy, and the effect is being rapidly apparent in the quality of turkeys offered for sale. A salient feature that has meant much in the policy has been the practice in most districts to build improvement out of the stock actually produced there.

From the dressed poultry fairs and co-operative carlot shipments a good deal of experience has been gained as to the individuals in the different districts whose turkeys grade the highest and come nearest to meeting market requirements. The practice has been to visit these producers in advance of marketing time for dressed poultry and select from the flocks, and mark with an approved band, the birds which show indications of quickest maturing, the most vigour, that come nearest fulfilling market requirements and save those as the breeding stock for the district. By so doing is secured right away a quality of breeding stock which has already been acclimatized, which is known to be reasonably free from disease, and which can be interchanged among the neighbours at a price within the reach of all.

A practice of this kind would only be possible through the first hand knowledge gained in the marketing of poultry in previous years, insuring an improvement in type much more rapid than could be gained by a few individuals obtained from some distant part of the country.

EGG AND POULTRY MARKETS INTELLIGENCE

The distribution of egg and poultry markets intelligence by daily and weekly reports is an important part of the work of the Poultry Division. This service reaches a large number of producers who follow it closely as a market guide. Two reports are issued, a stencilled daily report and a printed weekly report. The latter is printed both in Ottawa and Vancouver, the object of printing in Vancouver being to give better service and more up-to-date information to far western subscribers. The two printed reports have a total circulation of some eight thousand copies and there is, in addition, a stencilled weekly report issued in French from Ottawa.

The market information used in the report is secured largely through officers of the Department, although, at some of the more important markets, reports are also obtained from private individuals. Weekly cables and monthly market letters are received from the Old Country as well.

RECORD OF PERFORMANCE FOR POULTRY AND HATCHERY APPROVAL

Record of Performance for poultry in the record year 1928-29, the tenth year of its operation, has continued the steady increase in usefulness and efficiency that has been apparent since its inception in 1919. A total of over 200,000 birds have been trapnested to date under this policy. Of this number approximately 35 per cent have been certified as meeting the requirements regarding vigour, production, egg weight, breed type and freedom from standard disqualifications. This mass of tested stock provides, in a large part, the foundation upon which is being built a national industry.

The plan underlying this policy is to provide a steady stream of high power males going back to the approved flocks and the community hatcheries from which emanate the great mass of eggs for hatching and day-old chicks for the farms of Canada.

Intimately connected with this policy is the Hatchery Approval policy, introduced for the first time in the fall of 1928. This policy consists of the selection and inspection of the flocks behind the hatcheries which make application for entry in the Hatchery Approval Policy.

The day-old chick business is becoming an important link in the poultry business in Canada, it having been demonstrated that in contrast to conditions ordinarily found when one hatches with hens or with a number of recurring hatches with a small incubator, where a farmer buys two or three hundred day-old chicks at one time and all of one age, and broods them properly, that he saves himself a lot of time and labour and incidentally has a flock of sufficient size to warrant that care and attention that ensures him a uniform flock of pullets sufficiently matured to commence laying early in the fall of the year. In other words, a farmer finds himself, for the first time in his experience, with a daily return from his poultry at a time when eggs are highest in price that gives him an entirely new conception of the possibilities of poultry on the farm. Having in mind, therefore, the important part which the hatchery is bound to take in the future development of the industry, the Hatchery Approval Policy has been launched so as to ensure purchasers of the best possible stock and also to link up with this stock with such activity all the benefits that can be secured from the production of high producing stock under the Record of Performance Policy, the plan being to head all of the approved flocks, as soon as possible, with approved R.O.P. or other males of similar high breeding. The Hatchery Approval Policy is administrated under the same auspices as the Record of Performance Policy and, so far as possible, by the same staff. The work is largely inaugurated in co-operation with the Canadian Baby Chick Association and by agreement with them, fees are charged which largely takes care of the cost of operation.

EXHIBITS AND PUBLICITY

As has been the custom for some years past exhibits are sent by the Live Stock Branch to the majority of the more important summer and winter agricultural fairs in Canada. A comprehensive exhibit, embracing the various policies of the Branch, is prepared for the western summer fair circuit and, following the completion of these, is used at a number of fall and winter fairs in the East. The Exhibit during the past season, portraying the expanding home market for live stock and live stock products and accompanied by loud speakers telling the story of the exhibit, attracted widespread interest at every point where shown.

In addition to the larger exhibits, embodying the branch policies as a whole, a number of smaller poultry exhibits are sent out to the smaller shows. These include demonstrations on such matters as egg grading and poultry killing and dressing and also are designed to popularize the various Poultry Division policies.

A development of the past few years, which is growing in favour rapidly, is the installation of Egg Grading and Cooking demonstration booths at the larger summer fairs. These are financed in part by the Department and in part by the exhibition authorities. Rounding out these demonstrations are displays staged by the leading wholesalers and co-operative organizations in the various centres, the whole making a very attractive and educational egg display.

The use of store windows in the larger cities for egg display and grading demonstration work has been a feature of the Exhibits and Publicity Program of the Poultry Division during the past year. This has been found to be an excellent medium for acquainting consumers with standardized egg grading and it is planned to make increased use of store windows for demonstration purposes in both eggs and poultry during the coming year.

The preparation of an exhibit for the World's Poultry Congress in London next summer will be the major exhibit activity of the Poultry Division during the coming year. The Canadian exhibit at the Poultry Congress during 1927 created a profound impression on the delegates from the various parts of the world and an exhibit will be arranged at London which will further popularize Canadian policies and Canadian poultry breeding stock. A large volume of business, particularly in breeding poultry, is directly traceable to the effects of Canadian exhibits at these World Poultry Congresses.

In connection with the regular routine work of the Poultry Division, as well as for use at the Poultry Congress next year, a number of motion picture films, depicting the various phases of the poultry industry, are being made.

SHEEP AND SWINE DIVISION

SHEEP

Canada's sheep industry continued to expand during the year 1929. In both Eastern and Western Canada the lamb crop was satisfactory and although the season was dry, pastures having suffered to a considerable extent, lambs came forward to market with as much finish as usual. The wool clip was probably the most satisfactory for a number of years both in weight of fleece and cleanliness as well as strength and quality of staple. The wool clip to some extent reflected the general health of flocks and the general improvement in ewe stock following the continued use of pure-bred rams.

The consumption of lamb increased considerably during the year and according to official statistics is estimated to have been 7.2 pounds per capita throughout the Dominion. Lamb marketing statistics show that there was a considerable volume of lambs and sheep offered for sale each month of the year and during the months of June, July and August larger quantities of early lambs were sold at very attractive prices. On the whole lamb and wool prices were slightly higher in 1929 than in 1928 and as a result the year was one of great confidence and satisfaction to sheep raisers throughout the Dominion.

The demand for pure-bred sheep was good, both ewes and rams selling at satisfactory prices. The export trade in pure-bred sheep to the United States was somewhat above the average. Requirements and prices for grade ewe stock was considerably better than in 1928, the volume of ewes necessary to fill orders having to be met in a number of the provinces by the selection of ewe lambs.

The province of Manitoba imported some 10,000 head of range ewes from the United States. These were placed in small flocks on Manitoba farms under a special policy which aims to increase the sheep population of that province.

Sheep raising in Manitoba is being encouraged in order that farmers may more successfully combat the wheat problem which has assumed serious proportions in many districts. British Columbia made rather extensive importations from Alberta. The expansion of the sheep industry in British Columbia is largely confined to sheep ranching areas of the interior although a number of new sheep clubs have been organized in the older settled districts. In the Province of Quebec over 4,000 ewe lambs were selected from the fall run to establish new sheep flocks under the Sheep Club Policy.

Further improvements of pure-bred flocks was assisted by the importation of upwards of one hundred head of imported rams and ewes from Great Britain, these being mostly for breeders in the provinces of Quebec and Ontario. These animals were selected from a number of the oldest sheep raisers and leading exhibitors in the British Isles and should contribute considerably to the general improvement of our leading breeders in Canada.

In as far as can be ascertained sheep flocks throughout the Dominion are at the present time in a very healthy condition. Returns in both wool and lamb remain at a high average and market receipts of both lambs and mutton are showing the results of better breeding, modern practices in sheep management and more care in the finishing of the stock for market.

SHEEP FAIRS AND LAMB SALES

The value of these fairs and sales from the standpoint of encouraging co-operative marketing is becoming more apparent from year to year. They encourage the production of quality lambs; they have a pronounced educational value from the standpoint of educating the farmer to the exact market requirements as required in ideal market lambs; they reduce marketing expenses, encourage competition and ensure full market value for a quality product.

A new feature which was included during the past year under this heading was the assembling of fifty-four carloads of lamb club lambs at a Lamb Show and Sale which was held in conjunction with the opening of the Montreal Stock Yards at Point St. Charles. At this show there were classes for carloads, pens of five and two classes of singles. Following the judging, the lambs were sold by auction the next day. This event excited a great deal of favourable comment and did a great deal to give prominence to the work of improvement in market lambs which is taking place in the province of Quebec. It is expected that this show and sale will be made an annual event and an effort will be made to couple with it the further development of the sale of pure-bred sires by auction.

The experience gained at Montreal through the merchandizing of lamb carcasses from lambs sold at the Montreal Lamb Show makes it possible to initiate in a more general way the popularization of Canadian lamb as a meat throughout Canada. In the general expansion of the sheep industry which has taken place the Lamb Fairs have provided a medium through which choicely bred ewe lambs may be selected for the establishment of new flocks. In 1929, 123 Sheep Fairs were held at which 44,894 lambs were sold. Grants for the Sheep Fairs and Lamb Sales are provided by the provincial and federal Departments of Agriculture. Every fair in addition to its own local organization is assisted by the promotion staffs of the federal and provincial Departments of Agriculture. The sale of these lambs on a quality basis and the fact that they average almost ideal market weights of between 80 and 90 pounds has resulted in a decided premium for better quality lambs at all these fairs.

PURE-BRED RAM PREMIUM POLICY

This policy continues to exert an influence in popularizing the use of pure-bred rams, this being particularly true in the province of Quebec. Since its inception in 1919 something over 13,900 rams have been purchased by farmers

who had not previously used a pure-bred ram. The usefulness of the policy, even at this date, is evidenced by the fact that in 1929, 1,447 second premiums were paid and 1,786 first premiums were accepted. Each year the policy is definitely responsible for the establishment of new sheep breeding centres. These districts having observed the benefits accruing from the use of pure-bred sires continue to make steady progress in the grading up of their ewe flocks. From year to year lambs marketed from these districts continue to show greater uniformity and approach more nearly the ideal market requirements. The following tables show the number of premiums paid in 1929:—

RAM PREMIUM POLICY—FIRST PREMIUMS, 1929

Breed	Prince Edward Island	Nova Scotia	New Brunswick	Quebec	Ontario	Alberta	Total
Shropshire.....	10	31		396			437

BOYS' AND GIRLS' SHEEP CLUB POLICY

Following its adoption in 1927 this policy has continued to grow in popularity throughout the Dominion. From eleven clubs organized the first year the policy has expanded until in 1929 a total of fifty-eight clubs have been organized. The policy to date has been responsible for the establishment of upwards of 1,000 new sheep flocks on farms where sheep were not previously kept. Members of sheep clubs which include junior farmers and boys and girls are finding their new sheep flocks to be very profitable and the success which has attended their efforts has done a great deal towards stimulating interest and establishing new flocks amongst neighbouring farmers.

During 1929 it was found that as the requests for the organizing of new sheep clubs came forward through the field men or the promoters there was little difficulty in finding ten or more junior farmers or boys and girls who were willing to assume the responsibility of the management of a sheep flock. Having ascertained the information that the necessary membership could be secured, arrangements are then made for the holding of an organization meeting at which the members present decide upon one breed for the district, all agreeing to keep the same breed of sheep. Arrangements are then made for the purchasing of the necessary ewe stock, its distribution to members and the financing of the purchases where same is necessary. Club members have the co-operation

of the Canadian Banks in providing loans for the purchase of ewes or fencing, subject to the regulations of the policy. Little difficulty has been found in interesting the local bank manager in the organization of these clubs.

During the first year after the ewes have been placed with club members they are given close personal supervision. Usually before the ewes are placed the promoter sees that the fencing and the buildings are adequate for the accommodation of the ewe flock. Other duties of supervision include winter feeding and management, demonstrations on docking, castrating, dipping, shearing and the preparation of the wool for market. Members are also given instruction on the control of parasites and through personal contact and otherwise members are given first-hand suggestions on the many details of successful flock management leading to the marketing of high grade wool and choice market lambs. As the years go by sheep club members are demonstrating their ability to handle their flocks successfully and secure good returns in the way of wool and market lambs.

RAM GRADING

In 1929 a total of 3,472 rams were graded. This indicates the appreciation of this service on the part of pure-bred breeders and the demand on the part of grade flock owners for graded rams indicates its advantage whether buying by mail order or by personal selection.

WOOL GRADING

In 1929 centralized wool grading was again carried on at Weston, Carleton Place, Lennoxville, Fredericton, Truro, Antigonish, Charlottetown and at several points on Manitoulin Island. All co-operative consignments of wool shipped for co-operative sale are graded by official wool graders. The total amount of wool graded in 1929 was 4,463,128 pounds, this being an increase of 1,009,367 pounds over 1928.

The 1929 wool clip was considered to be one of the finest marketed for a number of years. The fleeces reflected improvement due to the use of better sires. Cleanliness in domestic wools reflected better housing conditions, improved feeding racks and greater care on the part of flock masters in keeping the fleeces free of chaff and other impurities. Range wools were particularly bright due to good wintering conditions and excellent pastures during the spring. The following table shows the amount of wool graded by provinces in 1929:—

WOOL GRADING

Province	Range	Western Domestic	Eastern Domestic	Total
Prince Edward Island.....			49,285	49,285
Nova Scotia.....			69,362	69,362
New Brunswick.....			15,399	15,399
Quebec.....			77,221	77,221
Ontario.....			739,174	739,174
Manitoba and Saskatchewan.....	398,985	646,217		1,045,202
Alberta.....	1,514,454	386,712		1,901,166
British Columbia.....	230,349	233,468		463,817
Sundry.....			102,502	102,502
Total.....	2,143,788	1,266,397	1,052,943	4,463,128

A new feature of the wool grading policy in 1929 was the special service provided for pure-bred sheep breeders. Individual fleece identity tags were provided and a special wool grader was designated to handle the grading of

pure-bred fleeces, thus making it possible for each breeder to get a separate grading for each ewe or ram in the flock. A total of 242 breeders availed themselves of this service and statistics are now available showing the grade, weight of fleece and other characteristics for ten breeds of sheep covering a total of 5,105 head.

SWINE

From a market standpoint, hog prices during the present fiscal year were considerably higher than in the year previous. This is indicated by the fact that the average price for the year was \$11.20 per cwt. as compared with \$9.80 per cwt. in 1928. The situation was also more favourable from the standpoint of the producer, not only as a result of high prices, but also because of a decided improvement in the relationship between feed prices and hog prices, so that on the whole the year 1929 was a particularly profitable one for hog raisers.

In spite, however, of the fact of remunerative profits from hogs, the industry showed a decided decrease in total marketings. Owing, however, to excellent consumptive demand in Canada, the industry did not suffer from a narrower export trade to the United States and a decided falling off in exports of bacon and other hog products to Great Britain and other countries. During the year Canadian hog prices were dictated largely from domestic, rather than export demand, and the close of the year saw Canada rapidly approaching the point where consumptive demand for bacon and hog products in the Dominion was almost equal to production. Exports of live hogs for the calendar year 1929 decreased to 3,942 head, while the total volume of exports of bacon and pork products was only 38,957,400 pounds this representing a decided reduction as compared with the previous year.

Canadian consumptive demand during the year provided further evidence of our growing ability to take care of increasing supplies of pork products on the domestic market. The price at which bacon and other pork products can be sold in Canada has resulted in the maintenance of a level of hog prices throughout the Dominion considerably higher than those pertaining in the United States, and also higher than could be obtained were Canadian hog prices on the basis of world prices for bacon in Great Britain. General improvement of Canadian hogs along bacon lines continues in all provinces of the Dominion. A new feature of the year's business was the shipment of a consignment of pure-bred Tamworth hogs to Great Britain, these proving highly satisfactory from the bacon standpoint to the British breeders. An importation of Yorkshire and Tamworth swine was also made from Great Britain, largely on order for pure-bred breeders in the province of Quebec. The demand for bacon type boars throughout Canada continued good. The demand for brood sows slowed up somewhat from the previous year but had taken on new impetus before the year closed.

Exports of Canadian bacon to Great Britain, although greatly diminished, proved to be of superior quality and reports indicated that if Canadian production can be increased to a point where a larger volume of exports is feasible, these will find a ready sale in competition with the production of other exporting countries.

HOG GRADING

The revised Hog Grading Regulations passed in October, 1929, made provision for a revision of the grades so that they would be brought into line with the general improvement that had taken place in Canadian hogs since the initiation of the policy in 1922. More than six months have now elapsed since trading under the new grades became effective, and there has been a general acceptance of them as representing a sound economic basis for day to day trading in hogs.

During the initial stages of the hog grading policy, the full responsibility of grading rested with the official graders stationed at stockyards and abattoirs. The grading of hogs at large receiving centres did much to establish a basis of purchase and sale on a graded basis at these points. It developed, however, that many hogs were still being bought on a flat basis at country points. The revised Hog Grading Regulations of October, 1929, included a requirement that all hogs intended for slaughter in Canada at abattoirs should be graded at the local shipping point or that, in lieu of this, each farmer's lot should be marked with a specific mark of identity. Shippers and drovers are also required to provide a certificate of grading showing the farmer's name, address, number of hogs, and the grade or mark of identity.

In Canada to-day, there are several thousand shippers or drovers who are either grading or marking their hogs. When the hogs are graded by the drover or shipper, his work is checked by the official grader at the point of destination. At the moment the majority of all regular shippers or drovers are well acquainted with the official grades and are grading the hogs according to requirement.

With all shippers and drovers either grading or marking their hogs, farmers throughout Canada are being kept posted on the grading of their hogs. The Department naturally had to grant considerable latitude in the application of the regulations at the outset. Quite a large percentage of drovers recognized that the law had to be complied with and endeavoured to the best of their ability to comply with the regulations from the beginning. Others, and these constituted quite a number, had to be told in no uncertain terms that if they intended to continue to handle hogs they had to adjust their operations to meet the requirements of the regulations. For quite a considerable length of time, these men required careful checking up to make sure that their work was being performed in accordance with the standards as defined for the various grades.

There was a small percentage of shippers and drovers who openly evaded the requirements of the regulations. In a few cases, it was necessary to initiate court proceedings before securing an agreement on the part of such men to comply. There is still the occasional case of the indifferent or careless operator and the itinerant shipper or drover who need checking up.

As soon as handlers of hogs were made acquainted with their responsibility in regard to local grading and as soon as local grading was established, it became apparent that a goodly number of operators were still buying hogs flat from the farmer. The Department at once took steps to have shippers and drovers not only grade hogs at the local points but also to secure settlement for hogs on the basis of official grades. Where the farmers have co-operated with the Department in advising of the fact that hogs are not being bought on the basis of grade or that hogs are being settled for on a flat basis, it has been easy to enforce the regulations and ensure that the graded price gets back to the producer.

As time goes on, farmers or producers are getting better acquainted with the official grades for hogs. They are getting to know that the hog grading regulations are being enforced, that they are continuing to have a big effect in the general improvement of hogs throughout the country and that the proper way to sell hogs is on a graded basis. The weekly grading of hogs at the local shipping point by drovers and shippers, as was anticipated, is of great educational value and where the graded price gets back to the producer, he sees in dollars and cents the commercial value of hogs of the various qualities.

The value of the Hog Grading Policy in bringing about continued improvement in the quality of hogs produced can be gathered by a study of the following table:—

HOG GRADING AS SHOWN BY PERCENTAGES 1923-1929, YARDS AND PLANTS COMBINED

Where graded	Select Bacon	Thick Smooths	Heavies	Extra Heavies	Shop Hogs

1927	5.07	0.15	1.33	1.47	0.15	100
1926	4.71	0.18	1.63	2.01	0.18	100
1925	3.13	0.13	1.42	1.78	0.18	100
1924	3.98	0.14	1.82	1.70	0.12	100
1923	3.67	0.16	1.17	1.52	0.14	100

The above table shows the percentage of each grade of hogs for the past seven calendar years. These statistics covering seven years of hog marketing under the policy of hog grading reveal a steady improvement in quality. It will be noted that in 1929 the revision of the official hog grades eliminates the grade known as thick smooth, which is now replaced by the grade known as bacon.

BOYS' AND GIRLS' SWINE CLUBS

After nine years of general application throughout the Dominion, this policy continues to be one of the major factors in effecting swine improvement work in the three Maritime Provinces and in the four western provinces. Thousands of Swine Club members who have gained initial experience in hog raising through

these clubs are now permanent swine raisers throughout the Dominion, many of them having developed to be pure-bred breeders of considerable rank and importance.

Each year sees the distribution of large numbers of bacon type gilts, many of which are retained by members for bacon brood sows on the farms on which they are placed. Through the Swine Clubs, a definite contact is made with the parents and with neighbouring farmers. In this way, up to date information regarding feeding, the use of dairy by-products, the growing of green feeds, proper housing, swine sanitation and intelligent marketing, are disseminated throughout the rural districts, all of which tends to encourage and stabilize swine production.

The winning of first prize in the Carlot Competition at the Royal Winter Show by a carload of hogs produced by Swine Club members in Manitoba is ample evidence of the ability of the younger generation to produce market hogs of outstanding quality. In 1929 eight carloads of hogs were produced by Swine Clubs which had 100 per cent select bacon hogs, giving some idea of the extent to which these members are aware of the proper breeding, the proper feeding and the proper weights at which to market.

The Judging Competitions, local and interprovincial, which are held each year, provide a medium for giving the members definite instruction on hog judging and a special incentive in this direction is provided by the Canadian National and Canadian Pacific Railways, which each year bring the high teams for each province to the Royal Winter Fair, Toronto.

Swine Club members are each year given special direction and supervision by Sheep and Swine Promoters of the federal and provincial Departments of Agriculture. Personal contact, the holding of local meetings, general instruction in feeding and in judging, result in keener interest and a greater appreciation of swine raising possibilities of the farm. The local prize money is being contributed as follows: one-third by the federal Department, one-third by the provincial Department and one-third by the community. Prize money for the Carlot Competition and Inter-Club Judging Competition is provided by the Dominion Live Stock Branch.

The following table gives the number of clubs organized during the past year in each province:—

Province	Number of Clubs
Nova Scotia.....	1
New Brunswick.....	17
Manitoba.....	28
Saskatchewan.....	18
Alberta.....	20
British Columbia.....	17

BACON HOG FAIRS

Many districts where Swine Clubs have been in operation for a number of years have now developed to the point where this policy has served its purpose, and with the general improvement of hogs in a district, it is possible to interest all farmers in the production of better hogs. The Bacon Hog Fair provides the medium through which all farmers in a district may become exhibitors of market hogs.

In Quebec province these Fairs are held in conjunction with Bacon Hog Clubs which are authorized in districts where Farmers' Clubs have been in operation and where approved boars are in use in each club district. Bacon Hog Fairs may be organized in any season of the year, in fact it is the aim of this policy to organize the breeding of hogs so as to distribute the marketing throughout the year. Bacon Hog Fairs are most popular in the provinces of Ontario, Quebec and the Maritime Provinces. Provision is made for both market and breeding classes and the prizes are derived from equal grants from the Dominion and provincial Departments of Agriculture, supplemented by local contributions.

The Bacon Hog Fair develops local interest, provides a demonstration in co-operative marketing, provides an opportunity for demonstrating the official hog grades and illustrates the benefits to be derived from producing bacon hogs, marketing them at the right weights and selling them on a graded basis.

The following table indicates the number of Fairs held in 1929 in each province, together with the number of hogs marketed and the grading of same:—

BACON HOG FAIRS

Fairs	Market Classes	Number Selects	Per cent Selects
Prince Edward Island.....(1)	36	(Pure-bred Sale)	
Nova Scotia.....(2)	63	47	74.6
New Brunswick.....(2)	60	24	40.0
Quebec.....(32)	2,897	578	19.8
Ontario.....(2)	283	123	43.4

PURE-BRED SOW CLUBS

The Quebec Swine Breeders' Association in 1927 felt that there should be a definite policy for the specific purpose of increasing the supply of pure-bred swine stock in the province. From eight original clubs, the policy has now been expanded to include a total of thirteen. Each member purchases a pure-bred sow and a specially selected boar is loaned under the Sire Loan Policy. It was not anticipated that every member would become a constructive breeder of pure-bred swine, however, in each club district a number of the members have displayed the necessary ability for pure-bred swine raising and these men are gradually developing and improving their herds along modern methods of management. Already a considerable number of breeders have been established and will eventually play an important part in the breeding and distributing of pure-bred bacon hogs throughout the province.

The following table gives the location of the various Sow Clubs now in operation and shows the number of exhibitors, together with the number of hogs exhibited in the various classes:—

Club	Number exhibi- tors	Class 1 — Number brood sows with gilts	Class 2 — Young boars	Class 3 — Young sows	Total
Berthierville.....	15	11	11	20	42

BACON GRADING

Although exports of Canadian bacon to Great Britain diminished somewhat during the year, there is still a large interest in the Dominion anxious to see Canadian bacon exports increased under a bacon grading policy. Hog graders are continually checking the live grading through to the rail, this providing the medium by which greater accuracy is attained in the grading of live hogs.

ADVANCED REGISTRATION FOR PURE-BRED SWINE

During the year the rules and regulations governing this policy were made available to all swine breeders in Canada, and although Advanced Registry was a new thing in this country, not yet out of the experimental stage, the entry of two hundred and thirty-five sows for test from all parts of Canada made it possible to give the policy a thorough trial under practical field conditions.

All sows and litters entered under the policy were inspected and tattooed. In this connection it was found that the ordinary tattooing inks generally used for this purpose with other live stock were not suitable in the case of swine due to fading shortly after its application. Many inks were experimented with and as a result, as may be judged from the work done, a satisfactory identification system has been established with the use of Chinese writing ink.

Slaughter tests of hogs were made at packing plants situated at Moncton, Montreal, Hull, Toronto, London, St. Boniface, Calgary, Edmonton and New Westminster. According to the regulations governing the policy, the Department paid the carrying charges on pigs going forward for slaughter. At the close of the year, one hundred and twenty-four sows had been represented in the slaughter test by the necessary four pigs called for by the regulations.

At the close of the fiscal year, a complete analysis of the year's work and of the performance of sows on test was made for the information of the Advanced Registry Board in making recommendation for a basis of scoring and qualifying sows under the policy. The procedure decided upon and accepted by the Department as tentative pending another year's work, provides for the scoring of sows under three main heads: 1st, Productive capacity; 2nd, Capacity of the progeny for early maturity; and 3rd, the quality of the progeny as revealed through the slaughter test. A sow to qualify must pass under all three divisions, scoring 40 under the first, 100 under the second and 75 under the third.

Under this basis of scoring, thirty-three per cent of the sows entered successfully qualified under the tentative standards, which means that they each brought to weaning age eight pigs; that the litter as represented by the slaughter test made growth, the equivalent of 200 pounds in 200 days and that the carcasses of these four pigs scored 75 points on the basis of scoring illustrated in the accompanying chart.

A review of the year's work and an explanation of the tentative standards of qualification were given general distribution in the month of March and a most general response on the part of breeders resulted. Plans have been made for further investigation of certain factors in connection with the policy on which full information was not available from this year's work in the hope that at the next annual meeting of the Advanced Registry Board, it will be possible to arrive at definite and final conclusions.

ADVANCED REGISTRY FOR SWINE—CHART ILLUSTRATING BASIS OF SCORING
(Slaughter Test)

Factors used in scoring	Weight of Carcass	Length of Side	Back Fat and Finish			Balance of Side	Belly
			Thickness	Evenness	Finish		
Perfect score	8	24	8	8	8	24	20
Standard required for perfect score.	Weight range 140-170 lbs. inclusive.	Minimum of 30 inches.	Maximum 2½ inches Minimum 1 inch.	Not more than ½ in. variation between shoulder fat and loin fat measurements.	Must be properly finished.	The middles must average 50% of average weight of the sides.	Must grade "Good" or "Excellent."
Points deducted for each fault from standard.....	2	See Note (1)	2	2	2	2	See Note (2)

Scoring for Length (1) For each side less than 29 inches 6 points are deducted. For each half inch or fraction thereof below 30 inches down to 29 inches, 1 point is deducted.

Scoring Bellies (2) For each belly grading "Fair" 3 points are deducted and for each belly grading "Poor" 5 points are deducted.

BACON LITTER COMPETITION POLICY

In 1929 this policy was inaugurated in the province of Ontario and as the results were so satisfactory, the policy has now been approved for the Dominion.

The Bacon Litter Competition has as its objective the establishment of a standard of excellence for grade brood sows kept by farmers. It is recognized that those sows which are prolific and rear large litters of select bacon hogs, that are good feeders making good gains at a low cost, are valuable as improvers of commercial hogs. This competition aims to give such sows prominence as breeders in their respective communities in the hope that their female progeny will be selected as foundation brood sows for the district.

Fifty per cent of the prize monies is paid by the provincial department and the balance by the Dominion Live Stock Branch when the policy is approved in a province. Competitions are open to all bona fide farmers in any province having sows, which have farrowed within specified dates. An eligible litter contains at least nine hogs, all of which must be marketed at the same time, that finish to market weights of 190 to 230 pounds under seven months of age, grading out to a minimum percentage of selects as agreed upon in each province.

Litters are scored according to the official weight at time of marketing and quality as determined by the grading of the hogs and the uniformity of the litter. In the past, considerable criticism has been directed against the bacon hogs, the argument being made that pigs of this type do not finish for market under seven months. The results obtained from 118 litters, which were entered in the competition in 1929, indicate that litters of nine pigs or over from bacon type sows are easily finished under seven months of age, in fact the majority of the litters which were in the Competition finished under six months averaging 200 pounds or better per pig. These litters were all fed by farmers who keep from one to three brood sows, but who are interested in the production of select bacon hogs and who realize the value of good brood sows in keeping down production costs. Quite a number of the litters entered in this competition graded out 100 per cent select bacon hogs.

As was anticipated, the competition centered attention on those brood sows which made a good showing in the competition and a large number of the gilts from the litters were selected by other farmers for breeding purposes. It is expected that this competition will be the means of eliminating a large number of undesirable and unprofitable brood sows and will provide a source of foundation stock known to farmers which will be available as brood sows at a price very little above market values.

The following summary shows the percentage of selects, average age, average weight and average number of pigs in a litter which were marketed from sows that qualified:—

Total number of pigs marketed from qualified sows, 560; total number of selects, 331; percentage selects, 59.1; average weight of pigs when marketed, 216.6 pounds; average age of pigs at marketing, 181.4 days (6 months); average number of pigs to litter, 11.2.

SHEEP AND SWINE DEMONSTRATION WORK

The organization of new Sheep Clubs and the organization of Swine Clubs, Sow Clubs and Bacon Hog Clubs, has necessitated the conducting of a large number of sheep and swine demonstrations. Although a large amount of this work has already been done, it is necessary to conduct demonstrations on docking and castrating, dipping, shearing and rolling and tying the fleece, in order that new sheep raisers may get first hand information on these practices. Market

cuts for undocked and uncastrated lambs have directed special attention to these operations and each year a larger volume of trimmed lambs is going forward to market.

The concrete dipping tank has proved so satisfactory for community dipping that larger numbers of requests are coming to hand each year for the use of forms and assistance in the construction of these tanks.

A number of sheep shearing competitions have been organized in connection with Sheep Clubs. These, with the large number of sheep shearing demonstrations, which are held each year, provide a medium through which new sheep owners are advised as to the proper methods of shearing and rolling the fleece for market.

In 1929 many drovers and shippers requested assistance in undertaking the grading of hogs at local shipping points under the new hog grading regulations. This assistance usually took the form of a hog grading demonstration and, in addition to providing the drover with the necessary instruction as regards the official hog grades, acted as an educational feature of hog marketing for the farmers.

SHEEP AND SWINE MARKETING COURSES

Sheep and Swine Marketing Courses were again held during the winter months. One of the special features during the present series was hog grading and hog marketing. Good hog prices and improved feed prices tended to increase interest in hog raising, consequently, feeding and management of hogs in relation to marketing was an important part of the program.

Control of parasites in sheep and swine is now recognized to be of prime importance in the economical production of market lambs and hogs. At all courses attention was drawn to the common parasites of both sheep and swine and when possible specimens were produced from post mortems of affected animals. Lectures illustrated common means of prevention and treatment.

In addition to the usual demonstrations on modern practices in sheep and swine management, judging classes were used to illustrate breed types in both sheep and swine, as well as market requirements in finished market hogs and lambs. Lectures on feeds and feeding dealt with rations for breeding stock, growing pigs and feeding for finishing purposes.

These courses seem to be of special interest to farmers both young and old, particularly as the marketing is being recognized as of great importance if the highest returns are to be received.

CO-OPERATIVE SHEEP AND SWINE MARKETING

Each year sees a larger field for co-operative sheep and swine marketing. Community production as encouraged by the various policies has resulted in the production in many districts of a larger volume of better quality, well finished hogs and lambs. Where districts have reached the point in animal production where weekly shipments are necessary to take care of stock offered, it becomes necessary to organize shipping associations. In the Maritime Provinces a considerable number of new clubs were organized during the year, they in turn becoming amalgamated with the Maritime Live Stock Marketing Board.

A new feature of co-operative marketing introduced during the year in the Maritime Provinces was the contract. A number of districts in the province of Nova Scotia signed a yearly contract and shipping associations operating in these districts were very successful in their operations during the year. Public opinion in the province of Quebec is also moving very fast towards the principle of operations under the contract and it is expected that 1930 will see a considerable portion of the province operating on this basis.

The organization of the Canadian Live Stock Producers Ltd., which is in reality a link up of Provincial Live Stock Co-operative Organizations has been

an important factor in eliminating selling competition as between co-operative organizations. The narrowing of market outlets to foreign countries for both lambs and hogs necessitated the development of organization in Canada to eliminate congestion of market receipts at any marketing point and to provide for the orderly distribution of market receipts with a minimum of marketing costs to the producer.

SIRE LOAN POLICY

The loan of rams and boars are now restricted to Boys' and Girls' Sheep Clubs and Boys' and Girls' Swine Clubs or to Associations organized in accordance with the Federal Policy. In the case of clubs, in view of the quality of the breeding stock which club members own, it is necessary to select animals of outstanding quality, consequently, although the number of animals loaned is considerably reduced as compared with last year, the general quality is the best that can be purchased.

SIRE PURCHASE POLICY FOR RAMS AND BOARS

Owing to the large extent of Canada and the fact that many farmers are resident in outlying districts of the province, assistance in the purchasing of breeding sires is a service which individual farmers and associations are coming to use more and more. Ram purchasing delegates in the province of Quebec are appointed by clubs or districts and where orders for twenty-five or more pure-bred rams are on hand, the purchase of these rams through a purchasing delegate reduces purchasing costs and, at the same time, insures selection of better quality stock for the district. The expenses of these delegates are paid by the Dominion Live Stock Branch. The purchase of carloads of breeding rams and even breeding ewes and brood sows under the Sire Purchase Policy is steadily becoming more popular with a large number of associations, particularly as sheep and swine promoters of the Dominion Live Stock Branch are constantly in touch with pure-bred breeders and know where good stock can be purchased in carload lots. In this way rams, boars, breeding ewes and brood sows are delivered to associations with a minimum of freight charges over and above the cost price. The Sire Purchase Policy is particularly adapted for newer districts and those distant from pure-bred breeding centres.

SHEEP AND SWINE EXHIBITS

In 1929 special sheep and swine exhibits were prepared for the Western Fair Circuit, these being also used at the Royal Winter Fair, Toronto. Sheep and swine exhibits were also exhibited at the Canadian National Exhibition, Toronto, Western Fair, London, and at the Class "A" Fairs in Quebec and at the Montreal Lamb Show and Sale.

The 1929 exhibits illustrated the improvement in Canadian hogs resulting from hog grading. One section showed the conditions under which Canadian hogs are now raised. Good buildings, the use of forage crops and home-grown grains combine to produce a quality of bacon and pork products which are unexcelled the world over. Sheep raising in its more modern aspects was also illustrated in the sheep section. Canadian lamb produced on Canadian pastures and marketed at ideal market weights produces a meat which is relished by Canadians and tourists alike.

A special exhibit was shown at the Canadian National Exhibition and at the Montreal Lamb Show, comprising a litter of pigs in the Bacon Litter Competition. The litter shown graded all Select Bacon hogs and finished for market under six months of age, the average weight per pig being over two hundred pounds. This exhibit was a very popular one illustrating the quality and easy feeding qualities of choice quality Select Bacon hogs.

GOAT EXTENSION WORK

Interest in goat raising continues at a high point in a number of the provinces, particularly British Columbia. During the year five herds were entered in the Record of Performance Test for goats, ten head having qualified. The highest test was made by Nubian doe "Shirley Rona" —296— owned by Harold G. Morson, New Westminster, B.C., whose milk yield was 2,595 pounds and butter fat 132.4 pounds. New entries continue to come to hand indicating the popularity of the Record of Performance Test and its advantages in popularizing the milking quality of milk goats. The demand for breeding goats continued good throughout the year. One of the problems affecting the further development of the goat industry is the unavailability of breeding stock in certain sections of the Dominion. Every effort is being made to assist in the further distribution of good milking strains of milk goats as required.

MARKETS INTELLIGENCE AND STOCK YARDS SERVICES

The Markets Intelligence and Stock Yards services, through regulation and intelligence service, promote efficiency in the sale and purchase of our annual surplus of commercial live stock, the value of which ranges between \$125,000,000 and \$150,000,000. The strict supervision of stock yard operation and facilities, and the provision of an elaborate markets news and daily market wire service, contribute in a very practical manner to economic and efficient marketing.

Through the Live Stock Commissioner, regulations are enforced governing the construction, maintenance and operation of public stock yards through the Dominion, and the methods employed in the actual sale and purchase of all live stock marketed at such yards. As well, the Markets Intelligence Service makes available to producers and trade, detailed information as to supply and demand of commercial live stock marketed at, or passing through any or all of these yards. Further, this service includes a bureau of supply and demand intelligence in regard to general live stock and meat trade, both domestic and foreign; develops forecasts; and issues daily, weekly, monthly and annual reviews and comments on supply and demand on domestic and foreign markets.

The stock yards duties are discharged by qualified officers of the branch, stationed at each of the public stock yards, and under the direction of the chief of the stock yards services. These yards, nine in number, are located at the following places: Calgary, Alta.; Edmonton, Alta.; Saskatoon, Sask.; Prince Albert, Sask.; Moose Jaw, Sask.; Winnipeg, Man.; Toronto, Ont.; East End, Montreal, P.Q., and West End, Montreal, P.Q.

The markets reports data and allied information is obtained through co-operation between the stock yard agents and their assistants, and the Markets Intelligence editorial and statistical staff at headquarters.

During the past year, the market conditions influencing the sale of this stock were analyzed for the benefit of producer, trader and consumer, and, as well, permanent statistical records made of each purchase and sale for future reference.

The complete rebuilding of the stockyard facilities at Point St. Charles, Montreal, P.Q., constitutes one of the greatest forward movements in the interests of the live stock industry of the province of Quebec and, as well, of Canada as a whole. These new yards, built by the Canadian National Railways, meet every requirement as laid down under the Live Stock and Live Stock Products Act. Point St. Charles has now the most modern, substantial and complete stockyard facilities on the North American continent. During 1929-30 a most up-to-date and substantial Live Stock Exchange building was completed at the Point St. Charles yards, by the railroad.

Revised rules and regulations under the Amended Act have been approved for all exchanges. Trust accounts for the handling of the proceeds of sales of live stock sold on commission are now operated, under the Act, by all commission merchants and co-operative associations doing business at public stockyards. As well, the majority of the live stock dealers have been bonded and the remainder are in process of being bonded. Also, the registration is completed of all persons and firms doing business at stockyards. In a word, strong progress is being made in the business of making Canada's stockyards system the best organized and operated on the North American continent, in the interest of all parties concerned, but primarily in an effort to serve better the live stock industry.

Forty-eight commission firms and co-operative associations operating at the nine stockyards in Canada are now registered and bonded. Also forty-seven live stock dealers are registered and bonded. Since September, 1928, a departmental accountant has been employed to inspect live stock shippers' trust accounts throughout Canada.

The chief activities of the services are hereunder enumerated:

1. Enforcement of regulations, as provided under the Live Stock and Live Stock Products Act, resulting in

- (a) The bonding of commission men, operating on public stockyards,
- (b) The operation of Live Stock Exchanges under Government supervision,
- (c) The regulation of service charges,
- (d) The instituting of Trust Accounts and appointment of travelling accountant,
- (e) Improvement in, and supervision of the accommodation provided for live stock, and
- (f) The regulating of the quality and cost of food supplied.

2. Officers of the branch located at the central stockyards at Montreal, Toronto, Winnipeg, Calgary, Edmonton, Prince Albert and Moose Jaw and Saskatoon graded for publicity purposes all live stock offered for sale, obtained detail as to the selling price, origin and disposition of the stock and, as well, the general condition of supply and demand.

3. The stockyards officers supplied the press with daily market news, letters and representative live stock sales. These, together with the weekly, monthly and annual analysis of supply and demand, have practically eliminated all other markets information services. Accurate analysis and quick service has in this way taken the place of the often contradictory and ambiguous statements of market conditions formerly in circulation.

4. The inter-Stockyards Telegraph Service inaugurated during 1919 was continued throughout the year. Telegrams are prepared by each stockyard agent, after a careful analysis of the condition of trading, and are wired each day as soon as the market is established, to the other stock yard agents. Previously, only those who could afford a telegraph service were able to benefit through immediate knowledge of the day's trading conditions at other than their own market.

5. The Daily Press Telegraph Service, inaugurated in 1919, is being continued. This consists of analysis of the conditions of supply and demand, telegraphed each day over the Canadian Press Limited, for publication in the daily news press of Canada. These wires are prepared by the officers at each of the yards at 11 a.m. and 4 p.m. daily, and appear the same evening and the following morning in practically every paper in Canada.

6. The weekly Markets News Service is being provided to the agricultural press of Canada, to district representatives of agriculture, to a selected producers mailing list, to the various provincial Departments of Agriculture, and to the British and American trade. This service consists of an analysis of live

stock supply and demand; comments on prospects for future markets; statistical tables showing the grading, numbers, average prices, price range for bulk of sales and top prices of all live stock offered for sale, the disposition and comparative receipts of the same; the grading of hogs under the Hog Grading Policy; and the exports of live stock to foreign markets.

7. To meet a growing demand for the same, the Markets Service undertook in March, 1925, the translation into French of the editorial section of the weekly Live Stock Market Report. The French edition is being mailed to the French press, agronomes in Quebec, and to a list of live stock producers who have requested the report.

8. A special report on the opening market of each week is prepared by the stockyard representatives and sent to the Farm press in time for publication in the current issue.

9. Each month, publicity is given to the live stock industry by the distribution of information on domestic and foreign crops, weather conditions, live stock and allied industries.

10. Memoranda on production, distribution and consumption of live stock and live stock products, both domestic and foreign, are prepared for the information of officers of the Department and outside parties.

11. This service continues to build up an information bureau on the statistical position of the live stock industry, general conditions under which live stock production is undertaken, the foreign live stock situation, the world's animal food-stuffs situation, the condition of the import and export trade in live stock and live stock products, and the financial conditions influencing the industry.

12. The service is recording the point of origin, class, grade and sex of all stock offered for sale at stockyards. These records cover the sales during the past six years, and are compiled in such a way as to be of value in estimating the condition and extent of the marketable surplus, either locally, provincially or for Canada as a whole. A monthly statement is sent to each of the agricultural representatives in the various provinces of Canada, showing the shipments from his particular county, in detail, to public stockyards, abattoirs, and on export.

13. The inspected packing plants throughout the Dominion continue to supply weekly statements as to their country purchases. As a large percentage of the total annual slaughterings by inspected establishments are not sold on the public market, the information obtained is indispensable to a complete survey of the supply and demand situation.

14. Through arrangements between the Department of Agriculture and the Department of National Revenue, the Branch records and issues information covering the origin and destination of all classes of live stock exported from the Dominion. This information completes the record of the total movement of Canadian live stock during any period of the year, and allows for the working out of formulae on which to estimate probable production and distribution.

15. A weekly cable service of the British market for Canadian cattle and bacon is telegraphed by the Division to the Canadian newspapers. The information is being supplied by the most reliable operators on the markets at Glasgow, Liverpool, and London. These cables are elaborated in the Branch and given the widest publicity possible through the medium of the associated press of Canada and our periodical publications.

16. A daily wire service is operative between the stockyard officers and the United States markets, with a view to obtaining exact and immediate knowledge of the prospects for export. Considerable financial benefit to the live stock industry is resulting from this service, shippers now being better able than heretofore to estimate the margin between domestic and foreign market prices before making shipment.

17. The Tenth Annual Review of the live stock and meat trade situation has been published and distributed.

18. The Tenth Annual Report on the origin and grades of commercial live stock has been published and distributed.

19. The policy whereby immature calves offered for sale on public stockyards are subject to condemnation, was again administered by the Live Stock Commissioner through the stockyards representatives. This policy has been effective for a number of years and has resulted in marked improvement in the quality of veal offered for public consumption.

20. The Markets staff is taking care of the compilation of the statistical information in connection with official hog grading under the Federal Hog Grading Policy. The stockyards agents co-operate with the hog graders in promoting satisfactory development of grading of hogs at yards.

21. The stockyards agents have extended their activities toward promoting familiarity with required market types of live stock. On request, the agents have addressed meetings, paid visits to farms for the purpose of grading the stock into the various classes, and, as well, have encouraged the clearance of unsuitable feeding stock and the purchase of that of good feeding type and quality.

22. A radio markets and agricultural news service developed during the spring of 1924 has been appreciably extended. Under arrangements with the Canadian National Railways Radio Department, the Markets Service broadcasts the latest reports on the live stock markets in Canada twice each week, supplementing the live stock, poultry, farm produce, crop and weather reports with talks on farm practices and general agricultural developments. At present, this service is being broadcast weekly from the following cities: Moncton, Toronto, London, Montreal, Quebec, Winnipeg, Calgary, Edmonton, and twice weekly from Ottawa. In addition, daily reports are broadcast from Moncton, Montreal, Ottawa, Toronto and Winnipeg, giving a summary of quotations on the same morning's markets. Live stock markets, dairy produce, eggs and weather report data make up the programs, and are especially designed to be useful to the producers in Eastern Canada.

During 1930-31, this Division will confine its efforts to enlarging further the projects already in operation.

THE SEED BRANCH

The Seed Branch encourages the production of superior seeds for domestic requirements and export, performs field inspection of seed crops for registration and certification as to purity of variety and quality, grades all field seeds offered for sale on the basis of control samples or of official samples drawn by inspectors; maintains laboratories for the analysis of seeds, feeding stuffs, fertilizers, binder twine, insecticides and fungicides; supplies markets information and develops the marketing of these products and of hay and straw which are also graded on request; administers the Seeds Act, Feeding Stuff Act, Fertilizers Act, Inspection and Sale Act, and Agricultural Pests' Control Act. The Branch organization includes four main Divisions, and for the enforcement of the Acts, Canada is divided into seven inspection districts, each supported by a service laboratory.

THE LABORATORY DIVISION

The work of this division is to test the various commodities controlled by the Acts administered by the Seed Branch, and embraces the testing of seeds for purity and germination; the chemical and microscopical analyses of feeding stuffs, fertilizers, insecticides and fungicides; and the testing of binder twine.

The seven seed laboratories serving the seven inspection districts are situated at Sackville, Montreal, Ottawa, Toronto, Winnipeg, Saskatoon and Calgary. The total number of samples tested at all the laboratories was some-

what smaller than during the previous year, largely because of the good harvest weather in Western Canada. All chemical analyses are made at Ottawa, the microscopical analyses being made at Ottawa and Toronto. The following table shows the number of samples received in each laboratory during the past year, and their sources:—

	Trade	Customs	Official	Total
Sackville.....	690	491	1	1,182
Montreal.....	3,360	1,804	1,013	6,177
Ottawa.....	7,049	1,457	1,724	10,230
Toronto.....	8,138	4,967	583	13,688
Winnipeg.....	4,838	1,888	834	7,560
Saskatoon.....	8,864	403	708	9,975
Calgary.....	8,310	1,936	741	10,987
Totals.....	41,249	12,946	5,604	59,799

Trade refers to samples sent in by merchants, farmers and institutions.

Customs refers to samples taken by Customs or Seed Branch officials in accordance with the Seed Importation Regulations.

Official samples are those taken by inspectors from lots which are sold or offered for sale and suspected of violating the Acts.

The samples of seed received are analyzed for purity or germination, in many cases for both, particularly the cereals and grasses. In the following table the number of purity and germination tests are shown for each laboratory:—

	Purity	Germination	Total
Sackville.....	1,195	1,238	2,433
Montreal.....	5,804	5,840	11,644
Ottawa.....	7,479	9,128	16,607
Toronto.....	14,115	13,944	28,059
Winnipeg.....	4,833	7,573	12,406
Saskatoon.....	6,271	8,627	14,898
Calgary.....	5,017	10,274	15,291
Totals.....	44,714	56,624	101,338

The total of 101,338 tests is an increase of 1,337 over the preceding year.

The samples of seed received are distributed quite unevenly throughout the year, the bulk of the samples being received during the months of December, January, February and March. A small permanent staff is retained during the entire year, temporary help being taken on during the busy months. The following table shows the distribution of work over the different months of the year:—

	Purity	Germination
	%	%
January.....	14.3	14.2
February.....	15.7	16.1
March.....	17.7	15.7
April.....	11.4	11.6
May.....	7.7	8.1
June.....	4.6	4.7
July.....	2.0	1.3
August.....	1.7	1.5
September.....	2.7	2.6
October.....	6.7	7.6
November.....	7.2	8.5
December.....	8.3	8.1
	100.0	100.0

TESTING OF SEEDS TO DETERMINE PURITY OF VARIETY

The establishment of seed-testing stations in other countries, commencing nearly sixty years ago, gradually led to the dumping of inferior seeds on the markets of countries where seed testing and seed control had not been established. Seed testing and seed legislation, therefore, became necessary as a measure of protection to Canadian agriculture, but this control has thus far been restricted to quality of seed in respect of germination and weed seed content.

In recent years a third and highly important division of seed-testing work has been instituted in other countries for the purpose of restricting the sale of seeds that are not true to kind and variety, and as the field root and garden vegetable seeds of commerce in Canada continue to be largely imported, it has been deemed advisable to institute this third division of seed-testing work in order that we may have from year to year precise information as to the quality in respect of trueness to kind and variety of the seeds that are being imported for commerce.

In connection with the seed laboratory recently established at Sackville, N.B., for the service of the Maritime Provinces, a small area of land was acquired on which to make growing tests principally of the imported seeds of field root and garden vegetable crops for which descriptive standards of characteristics for each variety had been established by Canadian plant breeders. Seven hundred tests of these imported seeds were made during the past year, each sample being tested in triplicate. Samples of all imported seeds are taken for analysis before the seed is released from bond by officers of the Department of National Revenue, and from these samples those to be submitted to a growing test were taken. The results of last year's growing tests were furnished to the individual importers of the seed, together with the intimation that the results may be published for the information of the public. The information thus derived will also be placed before the Advisory Board under the Seeds Act.

The results of this work thus far would seem to indicate the real need for enlarging this division of seed-testing work.

EDUCATION AND RESEARCH

Some of the major undertakings now in progress in this Division are: the preparation of a descriptive catalogue of seeds with illustrations; a study of the catalase method for the determination of the germination power of seeds; the determination of seed-borne diseases; investigations of the hardseededness of clovers as affecting their agricultural value; seed dormancy problems, particularly in regard to carrot seed; morphological seed studies of the genus *Agropyron*.

Considerable work has also been done in order to correlate laboratory germination with field germination, especially in regard to clovers. The Laboratory Division again co-operated with the Inspection Division in investigations of a more practical nature, such as seed drill surveys for the purpose of ascertaining the quality of seed used by farmers in different districts.

All of our seed laboratories have maintained their position as members of the International Seed Testing Association, and thus may be regarded as competent to do seed-testing work and issue reports thereon that may be acceptable in the adjustment of disputes pertaining to international commerce in seeds. This association each year endeavours to ascertain the efficiency of each member laboratory by submitting a series of samples of seeds for test and report.

The large and small weed seed collections were distributed as usual to farmers, merchants, and schools. Large collections were also prepared for our laboratories at Sackville and Saskatoon, and smaller collections were exchanged with other laboratories.

BINDER TWINE INSPECTION

Under the Inspection and Sale Act inspectors took 308 samples of binder twine to determine the correctness of the guaranteed number of feet per pound. Of this number 245 were of Canadian make and 63 of imported twine. Only eight samples exceeded the 5 per cent shortage, the limit of tolerance prescribed by the Act. Three were Canadian and five imported. It was found that 180 samples, or 58.4 per cent of the total, had an overage or more feet of twine to the pound than were actually guaranteed.

MICRO-ANALYSIS OF FEEDING STUFFS AND FERTILIZERS

During the year 1,245 samples of feeding stuffs were examined microscopically. Most of these were submitted by the inspectors, but a number of them were sent in by farmers and were accompanied by inquiries as to their value or complaints of results obtained in their use. The feeds examined may be classified as follows:—

Commercial mixed feeds.....	604
Commercial unmixed feeds (Manufacturers' by-products).....	261
Mill feeds.....	305
Chops.....	73
Miscellaneous.....	2

The results of these examinations suggest that certain manufacturers are not sufficiently careful in mixing, while certain others are at fault in not adhering strictly to the ingredients given when registering their products. The analysis of several samples of each registered mixed feed each year seems necessary for the protection of the public.

The analysis of samples of bran, shorts, middlings, and feed flour shows that these mill products are becoming quite standard in quality. Scourings and weed seeds were found only in a few samples this year. Mill screenings which, like the other mill products, are sold without registration, are very variable in quality. Excess of vital weed seeds was the chief infringement noted, but excess of injurious weed seeds and adulteration with inferior cereal products were also reported.

Only one sample of chop feed submitted for analysis appeared to have been deliberately adulterated. Weed seeds, injurious weed seeds, and vital weed seeds in excess, however, were found in a number of others.

In addition to the feeding stuffs, six samples of fertilizers were analyzed. All of these were being sold without registration, being subject only to Regulation 1 of the Fertilizers Act. Three of them were found to contain materials in addition to those claimed on the label. All of the work done in the examination of fertilizers leads to the conclusion that microscopical analysis would be useful in their control.

Several investigations were carried on during the year for the purpose of establishing new methods of analysis. A quantitative method for determining the amounts of various cereals present in cereal mixtures was tested. Another, for accurately determining the percentage of hoof in abattoir products, was investigated. New ways of detecting molasses and cod liver oil, when present in small quantities, were also tried. The results of these, when warranted, were incorporated into the routine laboratory practice.

CHEMICAL ANALYSIS OF FEEDING STUFFS AND FERTILIZERS

Owing to the fact that the laboratory was partially demolished during the past year, the number of samples analyzed was considerably below that of the former year. The construction of an addition to the central heating plant, which is to be used to heat the new Confederation Block and which is located immediately underneath the laboratory, was the reason for the change in the quarters. In all 1,315 samples of feeding stuffs were received and 120 samples of fertilizers.

These samples are received chiefly from the Seed Branch inspectors, who take them from bags and packages on the open market and also at the place of manufacture. A fee of \$10 is charged to others for the chemical analysis of a feeding stuff, and \$5, \$10 or \$15 for a fertilizer, depending on the amount of work required. The samples may be classified as follows:—

FEEDING STUFFS

Mixed feeds.....	592
Bran.....	101
Shorts.....	120
Middlings.....	57
Feed flour.....	22
Screenings, scourings and scalplings.....	78
Oat by-products.....	44
Other cereal products.....	103
Packing house by-products.....	92
Oilcakes.....	45
Miscellaneous.....	45
Flour.....	16

FERTILIZERS

Mixed.....	27
Pure salts.....	35
Basic slag.....	28
Packing house by-products.....	20
Acid phosphates.....	7
Miscellaneous.....	3

The samples which were received in excess of this number were analyzed by official analysts under the Act outside of Ottawa.

THE AGRICULTURAL PESTS' CONTROL ACT

This Act was passed in 1927 and came into force in January, 1928. Since that time a number of preparations have disappeared from the market due to the fact that when they were investigated they were found to be of little or no value. Others have been withdrawn from sale for the reason that the volume of sale did not warrant the expense of registering them. In spite of this, however, a net increase in number is observed in practically all classes registered. The following table compares those registered in 1928 and in 1929:—

	1928	1929
Fly sprays.....	32	39
Rat and gopher poisons.....	18	27
Weed killers.....	11	17
Arsenical preparations.....	51	51
Flea, lice and roach powders.....	34	45
Nicotine preparations.....	15	13
Dips, disinfectants and coal tar.....	24	26
Lime sulphur sprays.....	12	12
Sulphur and sulphur dusts.....	10	8
Heavy oils and emulsions.....	13	13
Bordeaux mixtures.....	13	21
Fungicides.....	23	24
Miscellaneous.....	16	16
	272	312

Insecticides, fungicides, weed killers, and rat and gopher poisons must be registered under the Act and have a registration number assigned to each preparation. The cost of registration is \$20 for each preparation and is renewable annually.

The majority of the brands registered in 1929 were sampled and analyzed. Some showed a wide divergence from the guaranteed analysis, but on the whole they were quite satisfactory. The manufacturers of the products which showed a deficiency were warned to bring their preparations up to the standard required.

THE SEED DIVISION

The work of the Seed Division includes the study of foreign and domestic seed legislation and of import and export regulations in effect in all countries exporting or importing seeds. This study is made with a view to drafting new or redrafting existing control measures to be submitted for the Minister's consideration. The Division deals primarily with the operation of the Seeds Act and regulations thereunder. Attention is given to seed production, to seed supply as between districts and provinces, to international trade in seed of all kinds, and to the preparation of exhibition material for publicity and educational purposes.

REGULATIONS UNDER THE SEEDS ACT

The Advisory Board under the Seeds Act operates with the Seed Commissioner as chairman and the Chief of the Seed Division as secretary, and includes an equal representation of seed growers and seed merchants and the chairman of the Agricultural Committee of the House of Commons.

The Advisory Seed Board was not convened in 1929. Resolutions from the Canadian Seed Trade Association and the Canadian Seed Growers' Association, in respect of amendments to the regulations under the Act, were submitted to members of the board, and the following suggested amendments were approved by the Minister.

The minimum percentage germination for wheat and oats under table 1, alfalfa under table 2, and buckwheat under table 4, were amended as follows:—

	Minimum percentage germination							
	Wheat		Oats		Alfalfa		Buckwheat	
	Old	New	Old	New	Old	New	Old	New
Registered No. 1.....	90	95	85	90	90	85		
Registered No. 2.....	85	90	80	85	85	80		
Registered No. 3.....	75	85	70	80	80	75		
No. 1.....							90	80
No. 2.....							85	75
No. 3.....							80	65

Footnote (c) under table 5, page 21 of the regulations, was also amended to change the date September 1, 1929, to September 1, 1930.

Control measures included under the Seeds Act prohibit the use of false or spurious names and misrepresentation as to variety or description of seeds or plants in any form of advertising or otherwise. Canadian and foreign seed catalogues are checked by the Seed Division, and seedsmen communicated with in respect to making necessary changes in catalogues and submitting samples of new varieties to have tested and licensed for sale in Canada in order to comply with the provisions of the Seeds Act. Variety names generally employed in Canada during the year ending March 31, 1923, are allowed, and provision is made for licensing new variety names on the basis of a report made by any plant

specialist designated by the Minister. During the year the following new variety names for the kinds specified were licensed for general use in Canada:—

Kind of Seed	Variety
Barley.....	Plumage-Archer Burbank Hulless
Broccoli.....	Italian Green Sprouting Sutton's Second Early Roscoff
Corn.....	Groff Golden
Flax-fibre.....	J. W. S. Fibre Flax
Grass—western rye.....	Mecca
Mangel.....	Alliance Globe Superlative
Melon—musk.....	Superfecto Sutton's Scarlet Hero
Potato.....	McLelan's Seedling
Swede—mangel.....	Majestic
Wheat.....	Pelissier

Progress is being made in establishing standard varietal descriptions and type photographs of field roots and garden vegetables. A survey of vegetable seed production in the Pacific Coast states was made by the Chief of Seed Division. Information was gathered on the growing and cleaning of these seed crops which has been of assistance to vegetable seed growers and has served as a guide in preparing seed importation regulations under the Seeds Act.

Trueness to variety tests of garden seeds were conducted at the Seed Branch trial grounds, Sackville, N.B., and the Horticultural Division trial grounds, Central Experimental Farm, Ottawa. One hundred and sixty-three samples of carrots, two hundred and twenty-two of beets, and two hundred and ninety-seven of peas, representing all shipments of these seeds imported into Canada, were assembled and forwarded for testing. The results of the tests were later compiled and published. Some samples were found to be very true to variety, while others were very mixed. Trueness to variety tests are being continued at Sackville and Ottawa trial grounds.

SEED IMPORTATION REGULATIONS

Regulations which govern the importation of seeds have a very important bearing on Canadian seed supply. They are applied in co-operation with customs officials so that no serious inconvenience is caused to importers. They embody control measures equivalent to those of other countries, and their operation precludes the admission of seed of a quality which could not legally be sold in the country of origin. The following table includes the principal kinds and quantities, with countries of origin, of seed imported into Canada during the year:—

Kind of Seed	United States									
	lb.	British Isles	New Zealand	Holland	Germany	France	Denmark	China	Japan	Italy
Alfalfa.....	567,406	12						lb.	lb.	lb.

SUBVENTIONS TO ASSIST IN PROMOTING THE PRODUCTION, CONDITIONING AND DISTRIBUTION OF SUPERIOR SEEDS AND FERTILIZERS

It is generally conceded that the best seed for Canadian conditions is that produced in our own country. The Seed Division co-operates with the provinces in conducting seed crop competitions, combined seed crop and seed competitions, seed fairs, and provincial seed exhibitions, and make subvention payments to the provincial Departments of Agriculture. Some changes were made in the plan for the payment of these subventions in 1930, and the maximum amount made available from the Seed Branch appropriation for each of the several purposes is as follows:—

Seed crop competition.....	\$ 50 00
Combined seed crop and seed competition.....	200 00
Local seed fair.....	50 00
District seed fair.....	250 00
Provincial seed exhibition.....	600 00
Seed cleaning machines.....	600 00
Machines to grind limestone or mix fertilizer.....	300 00
Freight charges per ton for agricultural lime.....	0 50

The total amount of subvention must not exceed \$1,200 to each province having less than one million acres under field crops, and \$1,200 pro rata for each additional million acres under cultivation in field crops, provided that the total subvention to which any province is entitled shall not exceed \$1,200 pro rata per 100,000 of total population.

Provincial Departments of Agriculture are paid these subventions up to one-half the amount paid by the provinces. The Minister of Agriculture for the province may utilize the total subvention due each fiscal year for any or all of the purposes above-mentioned, except for seed crop competitions. For the latter a total not exceeding twenty-five per cent of the amount available to a province may be paid.

From 1912 until 1926 subventions were paid by the Federal Department on the basis of two-thirds of the prize money, but with the revision of regulations requiring registered seed stocks for the combined seed crop and seed competitions, the Seed Branch has performed the inspections, the organization and other judging expenses being borne by the provinces. The total expenditures as paid by each province and the Dominion have thus been approximately on a fifty-fifty basis.

The amounts paid by the Seed Branch to the provinces during the fiscal year were as follows:—

	Seed Crop Competitions		Combined Seed Crop and Seed Competitions		Local Seed Fairs		District Seed Fairs		Provincial Seed Exhibitions		Seed Cleaning Machines		Other Projects
	No.	Amount	No.	Amount	No.	Amount	No.	Amount	No.	Amount	No.	Amount	
		\$		\$		\$		\$		\$		\$	\$
Prince Edward Island.....			3	540 00									
Nova Scotia.....	8	251 00									1	116 18	110 43
New Brunswick.....			9	414 25									
Quebec.....													397 71
Ontario.....	2	75 00	27	3,492 50	14	247 93	1	250 00	2	1,264 12			
Manitoba.....	10	365 59			14	657 12			1	600 00	8	1,743 00	
Saskatchewan.....	2	70 00	1	200 00	12	305 75			1	600 00			
Alberta.....													
British Columbia.....													

While amounts of subventions shown were paid during the fiscal year, such amounts were not the total due the provinces. Several accounts received during the year will be paid out of the vote for the following fiscal year, due to shortage of funds in the Seed Branch vote to meet extraordinary expenses.

In the case of British Columbia an annual subvention of \$2,500 is available towards encouraging the production and marketing of field root and garden seeds. The provincial Department of Agriculture authorizes the expenditure of an equal amount for this purpose.

SEED PRODUCTION

The production of high grade seeds in Canada is steadily increasing in importance. Canadian-grown seeds command recognition on foreign markets by virtue of their inherent qualities of winter hardiness and vigour of growth, and because our standards of quality for graded seeds of all kinds are so highly regarded. Stocks of high class seed of wheat, oats, barley, alsike clover, sweet clover, brome, Canadian blue, and browntop were available for export last year.

CERTIFICATION OF SEED CROPS

In order that the growing demand for seed of superior quality might be met, a further service of inspection of seed crops has been made available. Crop standards, which are now uniformly applied throughout Canada, were accordingly prepared and provide for inspections on the basis of purity of variety, trueness to type, or freedom from specified weeds. A Seed Crop Certificate was also prepared. This certificate is issued from the office of a district inspector and certifies the quality or character of a crop that has been found to comply with the standard of inspection applied. The following table shows the acreage of each kind of crop inspected, the nature of the inspection, the quantities of seed derived therefrom, and the quality or character for which certified:—

Kind of Crop	Acres inspected	Nature of inspection			Quantity of seed certified as to		
		Purity of variety	Trueness to type	Freedom from weed seeds	Purity of variety	Trueness to type	Freedom from weed seeds
		acres	acres	acres	bushels	bushels	bushels
Barley.....	288	267	21	2,219

Western rye grass.....	61	61	14,350

Following is a statement of the imports and exports of clover and grass seeds during 1929:—

ALSIKE

Imports, none. Exports, 8,013,280 pounds.

The average yearly exports of alsike seed from Canada during the past five years were 7,880,000 pounds.

ALFALFA

Imports, 232,492 pounds. Exports, 178,520 pounds.

The imports and exports of alfalfa seed since 1925 have varied considerably from year to year due to variable yields of the Canadian seed crop.

Alfalfa seed produced in southern countries is not sufficiently winter hardy for Canadian climatic conditions. Staining regulations have been put into effect requiring all alfalfa seed imported into Canada to be stained 10 per cent red, excepting that grown in the states bordering on Canada and the states of Utah, Wyoming, and South Dakota. Alfalfa seed from these states, if sealed in containers by officers of the state and certified to be of the Grimm, Baltic, or kindred winter-hardy variegated variety, may be imported when coloured 1 per cent navy blue.

RED CLOVER

Imports, 306,532 pounds. Exports, 60,120 pounds.

Canada has imported an average of 1,850,000 pounds of red clover seed annually the last five years. Because of very favourable conditions during the season of red clover seed development, home production in 1929 very much exceeded the average, hence the decrease in imports.

Imported red clover seed is required to be coloured to indicate its origin under the Seed Importation Regulations. Extensive trial plot tests indicate that red clover seed imported from southern countries is not sufficiently winter hardy to withstand Canadian climatic conditions. Efforts are, therefore, being made to increase home production of this important hay and seed crop by inspecting seed crops and sealing the seed derived therefrom in containers, certified as to origin of production, type or strain, and freedom from certain noxious weed seeds. Results of this work for the year were very gratifying, a total of 33,185 pounds of seed having been sealed and certified. This seed was produced principally in the provinces of Ontario, Quebec, Manitoba, and British Columbia.

WHITE CLOVER

Imports, 86,250 pounds. Exports, none.

This seed crop can be produced in Canada, but little progress has been made in increasing its production to meet home requirements.

TIMOTHY

Imports, 7,220,000 pounds. Exports, none.

The average yearly importation of timothy seed into Canada from the United States during the past five years amounted to 7,800,000 pounds.

Timothy seed can be produced in all the provinces of the Dominion, particularly Alberta, and production could be increased to the extent of greatly reducing the quantity required to be imported.

OTHER GRASSES

Imports, 773,181 pounds. Exports, 1,500 pounds (brown top).

Agricultural and lawn grass seeds can be grown in Canada, but low costs of production in other countries tend to discourage the increasing of our acreage of these crops. Kentucky blue grass grows freely in the Winnipeg district of Manitoba and in northern Alberta, Canadian blue grass is produced in Ontario, and bent grasses are becoming an important cash crop in the Maritime Provinces. Fescues are grown successfully in the western provinces, where their production can be greatly increased, and orchard grass can be produced in various areas throughout the Dominion.

FIELD ROOT AND GARDEN VEGETABLE SEEDS

Imports, 3,600,651 pounds. Exports, none.

Statistics would indicate that probably 90 per cent of the field root and garden vegetable seeds used in Canada are imported. Home production of these seeds has been encouraged for twenty years, and during 1918 the quantity of field root and some kinds of garden vegetable seeds produced in British Columbia and in Nova Scotia was substantial. It is generally agreed that the quality of the home-grown seed from selected stock seeds produced by Canadian plant breeders is superior to the seeds that are imported; but because the quantities that have been produced by individual growers are small and the growers themselves are widely distributed, home-grown seed has not found its way into general commerce.

With a view gradually to enlarging upon the supply of registered field root and garden vegetable seeds from inspected seed crops as a means to improve these crops generally in Canada, I have authorized officers of this Branch to examine into plans for a better system of marketing these home-grown field root and garden vegetable seeds, which should tend to encourage their production and more general use.

GRADING, INSPECTION, AND SEALING OF SEED

Seed inspection and grading constitutes a large part of seed control work. During the season when seed stocks are being assembled and conditioned at seed-cleaning plants and on growers' premises, a large staff of inspectors is required in order that prompt service may be provided. An inspector who acts in the capacity of seed grader is located at each district office where all control samples of seed are graded. He also examines and reports on all samples taken in connection with the enforcement of seed importation regulations under the Seeds Act. The volume of this work is such that it requires the whole time of this officer over the greater part of the year.

The volume of work in connection with the grading of seed for commerce on the basis of control samples received at district offices is steadily increasing. For each sample received a Control Sample Certificate is issued in the name of the sender of the sample, and is his authority for offering for sale for seeding purposes under the grade name stated on the certificate the lot of seed represented thereby. In making sales the quality of the seed must be maintained to the standard of the control sample.

The quality of seeds of the source and kind listed in the following table, and represented by control samples, is indicated by the percentages coming within the several grades. A separate division is made of the factors "Purity" and "Germination," and the sources of origin are indicated by the percentages stated under the headings Farmers, Merchants, and Institutions.

Kind of Seed	Source			Purity				Germination			
	Farmers	Merchants	Institutions	No. 1	No. 2	No. 3	Rejected	No. 1	No. 2	No. 3	Rejected

Vegetable seeds with germination below a certain minimum must be labelled to show the actual germination.

The service of inspection, grading and sealing of seed in containers occupies the full time of a number of inspectors during late autumn and winter. Central cleaning plants are steadily increasing, and at a number of these an inspector must be available at all times during the season when seed is being received and cleaned. The value of inspection and grading of this character is being more fully realized by discriminating seed purchasers, with the result that sellers of high class seeds are availing themselves of this service to a greater extent year by year. There were inspected at central cleaning plants and on growers' premises the following kinds and quantities of seed:—

Kind of Seed	Reg. No. 1	Reg. No. 2	Reg. No. 3	No. 1	No. 2	No. 3

INVESTIGATIONAL WORK

In collaboration with officials of the Cereal Division of the Experimental Farms Branch, two lines of investigational work are being carried on. Material was again collected and prepared for use in obtaining data on the relative values of seed representing a wide range of physical quality, and on the comparative values of germination results obtained in actual field testing as opposed to results from laboratory tests. This information is desirable as a guide in balancing quality factors in seed grading practice and in fixing minimum general quality standards with respect to seed grades.

ASSISTANCE TO CANADIAN SEED GROWERS' ASSOCIATION

The Canadian Seed Growers' Association is a national organization of farmers who specialize in the production of registered seeds. They multiply for commerce the foundation stock seeds called "Elite Stock Seed" produced by Dominion and provincial experiment stations and sometimes by private growers. The association office functions as a registration bureau for seed crops, directs the work of the growers, and publishes a seed catalogue. Registered seed provides much of the seed stocks for field crop competitions, local seed fairs, and provincial seed exhibitions. Complete information as to the work of the association may be obtained from their annual report. Financial support from the Seed Branch was continued during the past year to the extent of \$13,000.

A motion picture, illustrative of registered seed from the production of elite stock seed to the inspection of the crops and final grading of the seed, was made in co-operation with the Motion Picture Bureau of the Department of Trade and Commerce and the Cereal Division of the Experimental Farms Branch.

EXHIBITS

A Seed Branch exhibit was made at the Provincial Seed Exhibition and Dairymen's Convention, Moncton, N.B., and at Truro, N.S., and the Quinte District Seed Fair at Napanee, Ont.

THE FEED DIVISION

Under the provisions of the Feeding Stuff Act 248 manufacturers registered 979 brands of commercial feeding stuffs during the registration year ending September 30, 1929. These registered feeds may be classified according to their nature or trade designations as follows:—

Animal products.....	107	Oat scalplings.....	11
Barley products.....	7	Peanut products.....	1
Beet pulp (dried).....	6	Pig feeds.....	31
Brewers' and distillers' products...	30	Pigeon feeds.....	11
Buckwheat products.....	1	Poultry mash feeds.....	347
Calf meals.....	39	Poultry scratch feeds.....	92
Cocoonut products.....	2	Rabbit feeds.....	6
Corn products.....	10	Rice products.....	7
Cottonseed meals.....	27	Screenings.....	24
Cattle feeds.....	78	Sheep and goat feeds.....	3
Fish products.....	18	Soya bean products.....	6
Horse feeds.....	6	Miscellaneous mixed feeds.....	62
Linseed meal and cakes.....	19	Miscellaneous unmixed feeds.....	11
Oat products.....	17		

The number of commercial feed manufacturing concerns and of brands of feed registered shows a steady increase from year to year. Practically all the larger flour milling concerns are now producing and marketing a more or

less complete line of mixed stock and poultry feeds. In increasing numbers operators of small flour and grist mills are entering the business. They usually start by putting out one or two brands of poultry feed for local distribution, but many of them later branch out with prepared feeds for cattle, hogs, and other classes of stock. Some also carry a stock of materials on hand and put up rations on prescription usually in accordance with the formulae recommended by some recognized authority or institution.

The following table shows, according to provinces, the number of feed manufacturing concerns and brands of feed registered during the registration years 1927-28 and 1928-29:—

Province	1927-28		1928-29	
	Mfgs.	Brands	Mfgs.	Brands
Alberta.....	26	53	24	55
British Columbia.....	44	174	41	190
Manitoba.....	8	26	10	27
New Brunswick.....	2	4	3	4
Nova Scotia.....	2	4	3	5
Ontario.....	95	453	111	524
Prince Edward Island.....	1	1	1	1
Quebec.....	19	78	23	102
Saskatchewan.....	6	11	8	17
Other countries.....	23	44	24	54
Total.....	226	848	248	979

In order to check commercial feeding stuffs and wheat mill feeds for compliance with the guarantees and standards of quality and purity required by the Act, 5,846 inspection visits were made during the year and 1,334 samples were collected from manufacturing plants and wholesale and retail dealers, and submitted for analysis.

Manufacturers are required to guarantee and register the composition and ingredients of their mixed feeds. The substitution of other ingredients for those registered is responsible for a large proportion of violations found. Sometimes the materials substituted do not adversely affect the feed; in other cases they do. Sometimes the substitution is made because a certain ingredient is temporarily unobtainable; more frequently it is a case of market price. Failure to meet guaranteed analyses would appear in most cases to be due to manufacturers not allowing in their guarantees sufficient margins to take care of the normal variations in feed materials. Cases of injurious weed seeds in feeds are now comparatively rare, although vital weed seeds in chop feeds are quite common. This is not surprising, when the quantities of weed seeds in the feed grades of grain are considered, and when it is recognized that much of this grain is ground locally in steel-plate choppers which do not pulverize many of the finer weed seeds.

The usual close attention has been given, and with gratifying results, to securing the compliance of millers with the quality and purity standards for bran, shorts, middlings and feed flour. These products are now well standardized and few complaints regarding their quality are received, which is in decided contrast to the situation which existed prior to amending the Act in 1923 and 1924. Mill screenings, as might be expected, vary widely in quality and composition. Some mills which are equipped with cleaning machinery thoroughly to separate the wheat from the foreign matter present, find difficulty in meeting the maximum fibre standard of 8 per cent for their mill screenings.

During the year investigations were completed with respect to feed offal obtained in the milling of rolled oats and oatmeal, and with the approval of the Advisory Board appointed under the Feeding Stuffs Act, the former definition for Oat Middlings was repealed and substituted by the following definitions, fixing standards for oat shorts and oat middlings:—

Oat shorts shall be the by-product containing not more than 7 per cent of fibre, obtained in the milling of rolled oats or oatmeal from clean oats.

Oat middlings shall be the by-product containing not more than 4 per cent of fibre, obtained in the milling of rolled oats or oatmeal from clean oats.

The aggressive selling campaigns conducted by some of the larger feed manufacturers during recent years have undoubtedly stimulated interest in prepared feeds, and stock and poultry feeders are using them much more widely than formerly. Manufacturers more and more are keeping in touch with, and basing their feed formulae on, scientific findings in animal and poultry nutrition, and while they are always ready to cater to the type of purchaser who is governed largely by price, the tendency is towards the production of properly balanced feeds for the various classes of stock and poultry.

A recent development is the greatly increased use of molasses in feeds. In earlier years molasses was used largely to disguise or make palatable otherwise unpopular materials; but with cheaper supplies and the development of processes for applying cold, molasses is now being used in all kinds of ready-mixed feeds.

Apart from corn and cottonseed meal, Canada's imports of feed materials are of small proportions. During the fiscal year 12,848,070 bushels of corn were imported for purposes other than distillation and used chiefly for feed. These large importations are rather significant when it is considered that for many purposes barley is a recognized substitute for corn, and that large quantities of domestic barley have been available at prices much below those prevailing for corn or other feed grains. Undoubtedly through this substitution feeders with the requisite knowledge of blending materials to correct the deficiencies in barley as compared with corn could have effected a considerable saving in their feed bills.

MEDICATED STOCK SALT

Complaints are still being received against the activities of manufacturers and promoters of medicated stock salt, to which reference has been made in previous reports. It has been brought to our attention that several more dealers have made substantial purchases of this material during the past year, and letters have been received from the Retail Merchants' Association protesting against the unscrupulous practice of imposing this article upon merchants and others at absurdly high prices.

Unscrupulous methods are employed for effecting sales and making collections, while accounts, difficult of collection because the unfortunate purchaser has in the meanwhile become enlightened, are given over to a third and apparently disinterested party. In several cases the courts have established collusion between this third party and the manufacturer.

ELEVATOR SCREENINGS

The following table shows the quantities and distribution of the various classes of screenings cleaned from the western grain crop at terminal elevators at Fort William and Port Arthur during the crop year ending July, 1929, and for the eight months ending March, 1930:—

	Standard Recleaned Screenings		Oats Scalpings		Elevator Screenings		Refuse Screenings	
	Crop year 1928-29	8 months ending Mar., 1930	Crop year 1928-29	8 months ending Mar., 1930	Crop year 1928-29	8 months ending Mar., 1930	Crop year 1928-29	8 months ending Mar., 1930
	tons	tons	tons	tons	tons	tons	tons	tons
Thunder Bay District.....	32	28	8	85	30	25
Eastern Canada...	43,149	16,669	75,313	13,494	30	60
Western Canada...	450	280	65	40
Exported.....	35	60,433	7,325	279	198	119,766	33,933
Total.....	43,666	16,977	135,754	20,904	404	238	119,851	33,933

During the crop year 1928-29 there were also distributed from interior and Pacific coast terminals over 42,000 tons of screenings, while over 12,000 tons were milled at Fort William. This makes a grand total of over 355,000 tons, constituting a record, all classes excepting elevator screenings being practically double the shipments of the previous crop year.

Comparing these shipments with those from the 1923 crop, the previous record, it is interesting to note that oats scalpings mounted from 54,000 tons in 1923-24 to 135,000 tons in 1928-29, indicating a growing pollution of western lands with wild oats. Elevator screenings have been reduced to relatively small proportions, indicating the trend toward separating screenings into the cleaned and refuse classes before distribution from the terminals.

Differing from past years, storage and transfer houses in the east took care of a great deal of the domestic demand which was supplied from lake head terminals by boat rather than by rail. The number of local points in the east supplied by rail direct from terminals was considerably reduced, and shipments of screenings during the past winter and spring have been extremely light, in keeping with the light movement of grain.

Elevator and refuse screenings find little market in Canada, and the same is true of oats scalpings, although at the low prices which prevailed during the past winter it would seem that they could have been employed to advantage. One mill installed a machine for hulling the wild oats, thus recovering the groat which should make a valuable feed. Standard recleaned screenings are quite popular with Canadian feeders, and are used most extensively by Ontario farmers within short rail haul of the elevators of Goderich, Midland and Owen Sound. Inquiries made of users, millers and dealers in these areas would seem to indicate that the danger of weed pollution through the distribution of Standard recleaned screenings has been over-estimated, although it was ascertained that purchasers invariably have these screenings ground before delivery at their farms.

HAY AND STRAW INSPECTION

The following table shows the quantities and grades of hay and straw inspected during the fiscal year in accordance with the provisions of the Inspection and Sale Act:—

Kind	No. 1	No. 2	No. 3	No. 4	Shipping grade	No grade	Rejected
	tons	tons	tons	tons	tons	tons	tons
Timothy.....	387.4	4,051.97	556.8			271.5	468
Clover.....	29	5				3	9
Dyke.....	13	80					
Alfalfa.....	111.5	0.55	18.05			2.4	2.5
Prairie.....		20.5	29	10.5		9	
Mixed.....	46.18	107.28	132.71		9	51	76.14
Oat straw.....		18				10.5	18
Wheat straw.....		7.5				15	15
Straw.....		1					

Fees totalling \$1,226.28 were collected for this service, of which amount \$1,013.28 was remitted to the Receiver-General and the balance retained by those authorized inspectors whose only remuneration is the fee collected.

The 1929 hay crop was slightly above the five-year average, and for the most part was cured in excellent condition. Apart from unusually heavy shipments to the United Kingdom, export markets were dull. Domestic markets were moderately active and large quantities of hay were shipped from other districts to the dried-out areas in the Prairie Provinces.

MARKETS AND FERTILIZER DIVISION

MARKETS

The increase in public interest in respect of markets information and marketing problems has resulted in rapid expansion of these services in this Division.

Special marketing problems are investigated and solutions suggested. Information in regard to practically all phases of the marketing of the commodities controlled by the various Acts administered by the Seed Branch is gathered and made available to the public through periodic reports and correspondence.

MARKETS FOR THE YEAR ENDING MARCH 31, 1930

The seed market was not as satisfactory to growers as in some previous years. Prices were generally lower than in 1928, and even at the lower prices the export demand fell off. The demand for alsike particularly declined, so that a substantial carryover to next year is expected. On the other hand, timothy, blue grass, western rye, brome grass and red clover were absorbed in the domestic market, but at relatively low prices. Sweet clover, which was a drug in the market for a number of years, came into prominence again, due to reduced production and a much larger than usual demand in the Prairie Provinces where the severe drought reduced this crop in 1929.

Perhaps the largest red clover seed crop in the past twenty years was harvested in 1929, and Canadian farmers, sensing their opportunity to seed generously of this high quality domestic stock, have easily absorbed the entire crop. As the domestic red clover seed sells at a premium over the imported seed, being more satisfactory under Canadian climatic conditions, it is hoped that its production will continue on a large scale.

The principal export markets of Chicago and London were less dependable than usual during the export season of early winter, reflecting in a large measure

the unsettled grain market. Only the highest qualities were in demand in these principal markets, which made it very difficult to sell the lower grades. The qualities and standards in these markets are reaching a higher level each year, and Canadian seed growers and exporters would be well advised to keep this in mind.

The pressed hay market was very good during most of the year, due largely to a heavy export demand at good prices from the British Isles, where there was a hay shortage. Thousands of tons were shipped to British markets from the Maritimes, Quebec and Ontario. The principal demand overseas was for clover and clover mixtures, although timothy was purchased when clover hay could not be procured. The demand for hay in the eastern states was much smaller than in previous years, and also was mainly for clover and clover mixtures.

Millfeeds, commercial feeding stuffs, and other feeds were in good domestic demand during the past winter, at about the same prices as in 1928. The domestic demand for millfeeds almost equalled the supply, as there was a marked reduction in flour manufactures. Many of the mills operated only part time during the year, and some suspended their operations owing to lack of export demand for flour.

Coarse grains were much cheaper than in the previous year, reflecting the lower prices in the grain exchanges. Barley particularly was cheap, selling per bushel at a lower level than oats, a remarkable condition due to lack of export demand and the substantial increase in the production of barley in Canada during recent years. It is suggested that a larger part of Canadian grown barley might be utilized in Canada in place of imported corn. Mixed feeds for poultry, hogs and dairy cattle were in strong demand, indicating that the farmer is accepting the idea of balanced rations in live stock feeding.

The commercial fertilizer market was normally active, prices being slightly lower than in previous years. There was an important reduction in the price of sulphate of ammonia. This fertilizer is a by-product of Canadian coke ovens and producers are now making determined attempts to sell it in Canada instead of exporting to competitive countries at low prices. In this they may expect to receive substantial assistance from official and other sources.

MARKET REPORTING

The following phases of this service are provided:—

(a) The preparation in English and French of commodity reports designed to cover seasonal requirements, and issued as follows:—

(i) On clover and grass seed and seed grain, weekly from November to April inclusive;

- (ii) On fertilizers and agricultural limes, every two weeks during September, October, February, March and April;
- (iii) On supplies of feeding stuffs, hay and straw, every two weeks the year round;
- (iv) On imports and exports, of both seed and other commodities coming under the purview of the Seed Branch, twice a month the year round;
- (b) The preparation of monthly statements regarding markets, for publication in the Bulletin of Agricultural Statistics and the Canada Year Book issued by the Dominion Bureau of Statistics;
- (c) The preparation of weekly statements for publication by the press;
- (d) The preparation of special statements for provincial Departments of Agriculture and other official agencies;
- (e) Correspondence in which information is given to farmers and the trade regarding prices and market prospects.

Information in respect of imports and exports is provided by the Statistics Branch of the Department of National Revenue. Information in respect of foreign countries is obtained by cable from the following: Great Britain, France, Germany, Belgium, Holland, Denmark, Czechoslovakia, Italy, Argentine, Chile, and New Zealand. Canadian Government Trade Commissioners co-operate with us in procuring foreign information. Communication is maintained almost daily with the Bureau of Agricultural Economics, Washington, D.C., regarding markets in the United States.

Domestic information is obtained from representatives of wholesalers, jobbers, retailers and farmers who have a definite interest in the trade of the commodities reported.

The information published is based on the grades or qualities defined in the Acts which control the sale of these various commodities and which are administered by the Seed Branch.

During the past year an inspector in each of the seven Seed Branch districts was designated as Market Reporter. This official keeps in constant touch with the trade in his district and gathers and forwards the information to Ottawa for editing and publishing.

During 1929 about 7,000 English and 5,000 French copies of each edition of these reports were distributed regularly to farmers, the trade and officials. Information was widely quoted by the general press which is interesting to their readers.

The effect of this service is seen in greater public demand for the higher grades and qualities of the commodities reported and in the levelling of prices according to freights and other distribution charges throughout the country. The reports also serve as a guide to producers when placing their products on the market. The quotations permit the farmer to figure comparative costs of these commodities for current use.

MARKETS EXTENSION

Our principal activity in this direction was to encourage a greater utilization of Canadian made sulphate of ammonia. This valuable product has attained to the position in Canada of being the most widely used nitrogen fertilizer in the mixed fertilizer trade and for home mixing. Unfortunately the sulphate of ammonia produced in the Canadian coke industry was not reaching the Canadian farmer. Most of the 30,000 tons annually produced in Canada was being exported at relatively low prices, whereas large quantities were being imported from the United States and other countries at high prices.

An attempt was made to replace, in so far as was considered economical, the foreign sulphate of ammonia with the Canadian made article. The whole matter was placed before Canadian producers and fertilizer distributors, and

excellent co-operation was had in obtaining the end in view. The producers of sulphate of ammonia are co-operating wholeheartedly in developing a larger Canadian market by reducing domestic prices to almost export prices basis. This action should save the Canadian farmer from \$10 to \$20 per ton and provide a dependable domestic market for this fertilizer, which, if used judiciously, should increase the production of farm crops per acre and reduce their cost of production.

FERTILIZERS

The use of chemical fertilizers in Canada was practically unknown thirty years ago. The rapid growth of agriculture with new methods of farming has brought about the extensive employment of chemicals, so that they are now used generally for the control of insects, fungi, bacteria and weeds, and as fertilizer for feeding crops. The consumption of chemical fertilizers in Canada is estimated at more than 200,000 tons per annum, for which Canadian farmers are paying about \$6,000,000.

Practically all the superphosphate and potash used in Canada is imported from the United States and Europe. Most of the nitrate of soda is of Chilean origin, although the importations of synthetic nitrate of soda of United States production increases each year. In the past two or three years we have had an invasion of synthetic fertilizer products, mainly of German and United States origin. Canadian production of fertilizers includes cyanamid, sulphate of ammonia, bone meal, animal tankage, and fish meal.

Almost one-half of the total quantity of fertilizer sold in Canada is of mixtures of the aforementioned materials, the remainder being materials for single application. These mixtures are prepared at mixing plants maintained and operated by the trade throughout the country. As the selling value of these fertilizers is based on their guaranteed content of nitrogen, phosphoric acid or potash, it was found necessary to require vendors to meet a guaranteed analysis. This requirement is implemented by the Fertilizers Act as amended in 1928.

THE FERTILIZERS ACT

This Division is concerned with the administration of the Fertilizers Act and regulations thereunder, and the effects of this legislation on the trade are under constant scrutiny. A study of the legislation of foreign countries is necessary in order that our regulations may be kept abreast of modern fertilizer control and the public receive protection against poor quality fertilizer of foreign origin. A great deal of time is devoted also to the study of fertilizer production and supply at home and abroad with a view to guiding the trend of trade in the interest of the public.

Special importation regulations are provided and in each of the seven Seed Branch inspection districts inspectors are notified by customs officials of all imported shipments. Those imported in contravention to the regulations are not permitted to be distributed or sold in Canada unless and until all the governing regulations have been complied with. The prescribed method of inspection requires that in each district there shall be taken at least three official samples of every brand there sold. These samples are forwarded by the inspector to the official analysts for chemical and microscopic determination. The results of such analyses are published yearly and made available to the interested public. Under authority of the Act inspectors may seize any fertilizer which does not conform with its provisions, and withhold it from sale until the irregularities are corrected. Vendors whose fertilizer is incorrectly labelled or deficient in analysis are promptly notified to adhere strictly to the requirements of the law, while any flagrant irregularity or wilful violation is punished with prosecution.

As the taking of samples requires great care in order that they may thoroughly represent the shipment, special methods are prescribed by regulation under the Act. Because of this, individuals who have reason to doubt the guaranteed analysis of a fertilizer purchased should not undertake the taking of a sample, but should request the nearest fertilizer inspector to investigate and take an official sample. This service is provided free of charge.

ADMINISTRATION

The administration of the Act during the year was not attended with any special features. The trade has adjusted itself reasonably well to the restrictions imposed.

The number of registrations under the Fertilizers Act for the year ending June 30, 1929, was 369, as against 342 in the previous year. These registrations were assigned to 54 firms, as follows:—

	Firms	Registrations
Prince Edward Island	1	3
Nova Scotia	4	30
New Brunswick.....	3	5
Quebec.....	5	23
Ontario.....	14	161
Manitoba.....	1	1
Saskatchewan.....	0	0
Alberta.....	0	0
British Columbia.....	8	47
Great Britain.....	4	4
United States.....	14	95
Totals.....	54	369

The 369 brands registered may be classified as follows:—

1. Mixed fertilizers, complete.....	260
2. Mixed fertilizers containing only two of the three plant foods:—	
(a) Nitrogen and phosphoric acid.....	44
(b) Phosphoric acid and potash.....	44
3. Fertilizers containing only one of the three plant foods but not exempt from registration under the Fertilizers Act.....	21

In addition to registered fertilizers there were on the market basic slag and fertilizer chemicals such as nitrate of soda, sulphate of ammonia, superphosphate, and muriate of potash, all of which are exempt from registration.

Of the 871 samples taken by inspectors and analyzed 91 were found deficient and 780 met the guaranteed analysis directly or by compensation. Incorrect labelling, questionable advertising, and the abuse of the privilege of selling on prescription were the principal offences, other than failure to meet the guaranteed analysis.

During the year there was a large increase in the quantity of fertilizer imported from European countries. Some 51,000 tons were received from France, Great Britain, and Holland, consisting of superphosphate, mixed fertilizer, synthetic products, and basic slag. The United States, of course, continued to supply the largest part of our fertilizer requirements. The coming into the market of these European fertilizers, many of which are quite new to the Canadian trade, is demanding careful study so that they may be properly classified and defined under the Act for control purposes.

There were numerous instances this year of the trade clashing with the provisions of the Act owing to not having sufficient knowledge of these European fertilizers to define them for registration purposes in such a way as to prevent confusing them with other fertilizers of recognized standard nomenclature.

Investigation thus far would indicate that often European tankage is fortified with sulphate of ammonia and ground natural rock phosphate. In one instance, however, the adulterant was found to be ground and acidulated leather scrap containing about 7 per cent nitrogen and no phosphoric acid.

There is also a tendency yet on the part of the European trade to quote in Canada on an ammonia basis instead of nitrogen. This factor has caused serious misunderstanding after the goods have arrived in this country.

Canadian importers would do well to place their orders in Europe on a well defined basis in respect of analysis and ingredients, at least until the European trade becomes thoroughly familiar with the requirements of the Fertilizers Act.

THE MARITIME DISTRICT

This district includes the three Maritime Provinces, with headquarters at Sackville, N.B., where the district inspection office and seed laboratory are located. A permanent inspector for each province is assisted by seasonal inspectors who are employed as required during the busy seasons in the seed, feed, fertilizer, hay, binder twine, and spray material trades.

SEED PRODUCTION AND SUPPLY

The spring was cold and wet with seeding delayed considerably, particularly in some localities. The summer was exceptionally dry, and crops in parts of Nova Scotia and New Brunswick suffered accordingly. Prince Edward Island and other parts of Nova Scotia and New Brunswick had excellent crops of both seed and hay. In Prince Edward Island 107,661 bushels of oats, of which all but 3,210 bushels were No. 1, were graded by the inspectors and sealed in sacks over seed inspection certificates to meet the shortage in Nova Scotia, New Brunswick and Quebec. The sealing in sacks was a new departure, and this official guarantee of quality stimulated demand for Island oats in preference to re-cleaned western, No. 2 C.W. and Feed grades, large quantities of which had formerly been sown with disastrous results from the standpoint of weed introduction and frequently poor germination.

Maritime farmers are being encouraged to harvest their own requirements of timothy seed instead of importing from the United States. During the year 1,000 pounds of No. 1 and 4,000 pounds of No. 2 timothy seed were cleaned and graded.

The growing of bent grass seed is now well established. The industry has been centered in Prince Edward Island, where the growers pool their seed according to grade. P.E.I. Bent is the trade name for a variety which is identical with the Rhode Island Bent and the Colonial Bent of New Zealand. The Canadian demand for this seed is restricted to grade No. 1, of which 13,500 pounds were harvested in 1929, and 22,693 pounds, most of which graded No. 2, were bulked for export to the United States. A start has been made also in the growing of Velvet Bent and Creeping Bent for seed. The bent seed crops are inspected in the field and the seed is sealed in sacks over seed inspection certificates and disposed of at profitable prices.

Registered seed crops were limited to Banner and Victory oats, Charlottetown 80 barley, and Ditmar's Bronze Top swede turnip. The quantities sealed as registered included 987 bushels of oats, 145 bushels of barley, and 1,092 pounds of swede turnip seed. About 3,000 pounds of swede turnip seed were grown in 1929, and many times that quantity could have been sold at high

prices. The climatic conditions are particularly suitable for turnip seed growing, and Canadian requirements could be produced in these provinces. Ditmars' Bronze Top was sold under registered brand in sealed cartons, and several inquiries were received from Quebec, where it is recommended by the Provincial Seed Board. Bangholm turnip seed, which is resistant to the club root disease, retailed up to \$1.25 per pound.

The combined field crop and cleaned seed competitions were continued in cereal grains and swede turnip seed. The grading of the samples is shown by provinces in the following table:—

	No. 1	No. 2	No. 3	Rejected
Prince Edward Island.....	49	11	13	7
Nova Scotia.....	35	6	5	5
New Brunswick.....	32	7	14	38

The large number of rejected samples, particularly in New Brunswick, indicated unsuitable machines or negligence in cleaning; but with the establishment of further seed centres there the usual improvement is anticipated. The germination was generally excellent.

Four seed-cleaning centres were organized in Nova Scotia and one in New Brunswick by the Provincial Seed Boards, making ten co-operative seed-cleaning centres in the Maritime Provinces, and from the 1929 crop 12,030 bushels of cereal grains, 5,000 pounds of timothy, and 39,369 pounds of bent grass seed were cleaned and graded.

The laboratory established at Sackville in 1929 has stimulated interest in the quality of seed. During the season 1,675 samples were tested and graded from the following sources:—

950 from farmers and dealers;

653 from seed importations through customs;

32 taken officially as suspected violations of the Seeds Act; and

40 for special investigation.

The seed imports include 291,690 pounds, being mostly grass and clover seed, peas and rape, field root and garden vegetable seeds. Only 163 pounds had to be deported for noxious weed seeds or low germination.

SEED EXHIBITIONS

Provincial seed exhibitions were held at Charlottetown, Truro, and Moncton. The exhibitions at Charlottetown and Truro being restricted to official samples were of excellent quality. The Seed Branch had an exhibit at Truro and Moncton featuring Maritime seed and hay classified by grade, commercial feeding stuffs and fertilizers, and domestic and imported red clover seed stained to show the country or region of origin.

INSPECTION

The inspectors visited 982 points and made 907 visits for crop and seed inspection, 179 for feeding stuffs, 140 for fertilizers, 27 for binder twine, 396 for hay, 56 for economic poisons, and 193 for markets information. The seed

crop inspections totalled 2,868 acres, and the following kinds and quantities from the 1929 crop were sealed in sacks for market:—

Kind of Seed	Reg. No. 1	Reg. No. 2	Reg. No. 3	No. 1	No. 2	Export
	bushels	bushels	bushels	bushels	bushels	bushels
Oats.....	501	307	179	104,451	3,210
Wheat.....				16	
Barley.....		91	54	110	
	pounds	pounds	pounds	pounds	pounds	pounds
Timothy.....				1,000	4,000
P.E.I. Bent.....				13,500		22,693
Velvet Bent.....						300
Creeping Bent.....						2,676
Swede Turnip.....	1,092				

Seed dealers were also visited and 290 official samples were taken, but as nearly all the small seeds sold in these provinces are imported or bought from wholesale seed houses, very few violations were reported, and only two of these were considered for prosecution.

Thirty-four official samples of feeding stuffs were taken. The sale of a commercial feeding stuff claimed to have been found poisonous to cattle was discontinued. A "Mixed Wheat Feed" which did not comply with the definition for pure mill feeds was forbidden further sale. Argentine shorts containing screenings and excess vital weed seeds were forbidden further importation and sale. Proto Concentrate, Royal Buttermilk Laying Mash, Fish Meals, etc., were made to comply with the requirements. Most of these commercial feeding stuffs are imported or originate in other inspection districts.

Practically all fertilizer materials and mixed brands brought into this district were sampled by the inspectors, mostly at the ports of entry. Importations included 21,159 tons into Prince Edward Island, 35,259 tons into Nova Scotia, and 38,141 tons into New Brunswick, 3,695 tons of the latter being for reshipment to the state of Maine. The fertilizer business was very heavy through the port of St. John and up to 40 cars a day were distributed to country points. The early spring caused rush shipments, but inspections were completed before the shipments were made. Three seizures were made and shipments were held for correct labelling. A few infractions in regard to registration and other provisions of the Act were dealt with. A total of 115 samples were analyzed by the official analyst.

Hay was inspected and graded as follows:—

—	No. 1	No. 2	No. 3	No grade	Rejected	Total
	tons	tons	tons	tons	tons	tons
Timothy.....	280	2,101	251	2,632
Dyke.....	13	39	52
Clover mixed.....	39	17	56
Mixed hay.....	15	27	2	44
						2,784

This was shipped from Westmorland and Carleton counties, New Brunswick, and Cumberland and Colchester, Nova Scotia. Most of it was sold locally, but several shipments were made to Great Britain. The system was adopted of inspecting on the dock rather than at country loading points, thus lessening the cost of inspection. Practically all the surplus hay was marketed. The quality was much better than in previous years, due to earlier cutting and excellent weather for curing. A short course in hay grading for inspectors was held at Sackville early in the season to secure uniformity in their work.

The inspection of binder twine included seven official samples, and tests for length per pound showed the different brands well within the 5 per cent tolerance allowed.

Careful attention was given to insecticides and fungicides under the Agricultural Pests Control Act. Official samples were drawn from fifty-five lots in the trade, and practically all were found to be within the requirements of the Act.

Farmers, dealers, and inspectors contributed production, supply, and markets information in regard to the several products under control, and reports were made to the Chief of the Markets Division, whose periodical market reports were widely published in Maritime papers.

EDUCATIONAL WORK

The inspectors judged at exhibitions and seed fairs, attended agricultural meetings and short courses, and gave addresses on seed production, seed crop inspection, and inspection procedure under the several Acts. Papers were given over New Brunswick radio hook-up on seed production in the Maritime Provinces, purity of variety in vegetable seeds, and the work of the seed laboratory. The inspectors are members of the provincial Seed Boards, which encouraged seed production through organization of seed competitions and cleaning centres, and issued information in regard to growing and preparation of exhibits for the World's Grain Congress at Regina. Junior farmers' organizations were interested in obtaining supplies of registered seeds, and county demonstrations were encouraged to show their superior value. Seed Branch notes were given to the Maritime press, and articles were published in Canadian and United States papers.

QUEBEC DISTRICT

This district comprises the province of Quebec with the exception of the counties of Wright and Pontiac. The headquarters are located in Montreal, with a sub-office in Quebec city. The district inspector and seven inspectors compose the inspection staff. Four inspectors are attached to the headquarters in Montreal, one is in Quebec city, and the other two are stationed at country points where their work can be performed efficiently with the least expense.

One of the inspectors in Montreal gives most of his time to the market reporting service; one is responsible for the grading and all correspondence pertaining to this particular phase of our work; and the other two devote their time to the enforcement, in Montreal and adjoining districts, of the different laws administered by the Seed Branch.

SEED PRODUCTION AND SUPPLY

The province of Quebec was not favoured with an early spring, which meant that the seeding operations were delayed and conducted under unfavourable conditions, especially in the eastern part of the province. During the growing season and early fall, however, good weather prevailed, which resulted in an average yield for agricultural crops in general.

Clover seed production has not increased to a marked extent. The quality of the seed was good, and the producers experienced no difficulty in having their crops graded No. 1. This is due largely to the establishment of seed cleaning centres in those districts. In Bagot county 15,000 pounds were grown, and in Chateauguay county 35,000 pounds.

The acreage of barley for malting purposes was increased and a good crop was harvested; but owing to a depreciation in the market value of this particular grain, the producers did not obtain what they expected. As a consequence a considerable quantity of barley, grown in Berthier district for that purpose, was disposed of locally.

The acreage sown to Alaska oats was slightly increased again this year. It is to be hoped that a sufficient quantity of this early variety of oats will be produced in the near future, as the demand from districts where the season is short, such as Abitibi, Temiscouata and Gaspé, becomes greater every year. About five thousand bushels of No. 1 grade of this variety were sold in Abitibi.

Two new seed cleaning centres, one in Iberville county and the other in Bagot county, were organized during the year in co-operation with the provincial department. This policy of establishing seed cleaning centres in various parts of the province has already brought good results. Several carloads of No. 1 seed oats were produced and marketed from those districts. About 15,000 bushels of No. 1 seed Banner oats, grown in Laprairie, Napierville, Berthier and St-Jean, were shipped in carload lots to different points of the province, through the medium of the Federated Cooperative.

Sixty-one thousand pounds of flax seed, grown in Soulanges county, were inspected and graded by our service, for exportation to Ireland.

Owing to a change of policy, on the part of the provincial Government, seed fairs and provincial exhibitions were discontinued. Their contention is that this work has served its purpose, and a change was necessary in order to stimulate the farmers towards the production of good seed, for their own use and for market. The moneys formally granted for prizes at the numerous seed fairs held throughout the province will in future be given to those farmers who are organizing themselves for the purchase of seed cleaning machines, a plan which promises to be more effective in encouraging the production and use of good seed. A certain amount is also given towards encouraging the farmers to use more lime on their farms.

SEED COMPETITIONS

Sixty-five combined field crop competitions were organized in co-operation with the provincial Department of Agriculture. The following table gives the results obtained on samples analyzed in connection with this work:—

Kind of Seed	No. 1		No. 2		No. 3		Rejected		Total
	No.	%	No.	%	No.	%	No.	%	Number
Oats.....	413	26.0	170	10.5	248	15.5	765	48.0	1,596
Wheat.....	35	20.0	32	18.0	29	16.5	79	45.5	175
Barley.....	59	28.0	28	13.0	26	12.0	102	47.0	215
Peas.....	40	40.0	16	16.0	25	25.0	19	19.0	100
Vetches.....	26	75.0	4	11.0	2	6.0	3	8.0	35
Red clover.....	72	35.5	63	31.0	44	21.5	32	15.5	211
Totals.....	645	27.6	313	13.8	374	16.1	1,000	42.5	2,332

The high percentage of rejected seeds is due to inefficient cleaning and to several counties organizing these competitions for the first time this year. In the counties where this work was introduced several years ago a marked improvement has been observed. The germination of the competition samples averaged 90 per cent.

REGISTERED SEED

The production of registered seed has not increased, due to lack of demand for high priced seed and the competition of seed of No. 1 grade. The following table indicates the quantities registered during the year:—

Kind of Seed	Variety	Registered No. 1	Registered No. 2
		bushels	bushels
Barley.....	O.A.C. 21.....	446
Oats.....	Banner.....	523	588
	Alaska.....	1,410	209
Peas.....	Arthur.....	59
	Mackay.....	69
Wheat.....	Huron.....	64
Totals.....	2,507	861

INSPECTION

The inspectors covered 1,785 points during the year, and visited 5,038 merchants divided as follows: 2,390 seed, 1,652 feed, 509 fertilizer, 28 hay, 381 insecticides and fungicides, and 78 binder twine. Official samples taken in the course of these visits were: 1,274 seed, 249 feed, 115 fertilizer, 148 insecticides, 22 binder twine.

Although a large number of official samples of seed were taken there were very few violations of the Seeds Act. The seed trade generally observes the law and is interested in seeing that it is rigidly enforced.

Nearly all brands of feeding stuffs were sampled, at least once. No violations were reported against the large manufacturers of feeding stuffs. As with the large seed houses they are interested in having the law properly applied. This is not the case, however, with some of the small mills and some dealers who are marketing locally feeding stuffs mixed on their own premises. Although no prosecutions were recommended the inspectors have been active in keeping these local firms under close observation.

Considering the large quantities of fertilizers imported and sold in this province as compared with previous years, the number of official samples taken does not seem very high. This is due to the fact that the inspection was done in most cases at ports of entry rather than at country points. Samples taken, therefore, might represent several carloads instead of small shipments or just a few bags. This system was found satisfactory, as the fertilizers imported at the present time generally conform to their guarantee.

There were 933 tons of hay inspected by our inspectors and 1,067 tons under the fee system, making a total of 2,000 tons, mostly No. 2 and No. 3 timothy. Outside of the large firms which ask for government inspection as a measure of protection, there is practically no request for inspection. It might be noted, however, that those firms will pay more for hay that comes within grade than for ungraded hay.

The enforcement of the law controlling the sale of insecticides and fungicides has awakened a good deal of interest on the part of the dealers and the manufacturers, as well as the users of these products. Good results have already been obtained and the violations reported are attributable more to ignorance of the requirements than to the intention of dealers to evade them.

All the binder twine samples taken were found to be within the law.

Regular market reports of the trades affected by Seed Branch inspection were forwarded periodically to the Markets Division of the Seed Branch.

EDUCATIONAL WORK

The inspectors attended agricultural meetings and short courses held in their respective districts, and spoke on subjects pertaining to their work. Two inspectors gave short courses to the students of the French agricultural schools. This work was very much appreciated and will be continued in the future.

Meetings of the Provincial Seed Board were regularly attended by the district inspector or one of the inspectors. Assistance was given to provincial officers in organizing seed cleaning centres.

EASTERN ONTARIO DISTRICT

Ottawa is the headquarters for the district which comprises Old Ontario, east of York county, and the Canadian National Railway running from Toronto to North Bay, New Ontario to Lake Nipigon, and Wright and Pontiac counties in Quebec.

SEED PRODUCTION AND SUPPLY

There is a wide range of conditions in this district, and during many seasons the local supply of seed would be inadequate. Nearly all the cereal crops do well, and of the small seeds red clover, alsike, and timothy may be produced in abundance. However, in spite of these facts there are few seasons when some sections, and often very large areas, are not short of one or more kinds of seed. Last season was no exception, as considerable seed stocks of oats and barley were needed in eastern Ontario in addition to those produced locally. The needs were less for 1929 than for 1928. Meadows and fall wheat came through the winter in good condition. Sufficient rains fell to ensure a good crop. Good weather prevailed for saving the hay and harvesting the grain crops. Most of the timothy was saved as hay, and very little was harvested for seed which increased the demand this season for timothy seed.

Very dry weather set in before the spring crops reached their normal growth, with a resulting decrease in the yields of barley and oats. Some of the later sown crops were rather light in the kernel, but the vitality was not impaired. The pea crop was greatly affected by the dry weather and was below the average in yield for both garden and field peas.

The yield of alsike seed was influenced by the dry weather conditions, and much of it was only a fair sample for colour and purity. Considerable quantities are still held by the growers. The red clover seed crop was above normal in both yield and quality, being one of the cleanest harvested for many years. The low price prevailing resulted in all of this seed being consumed. Early sown cereals gave the best results, both in yield and quality. While central and eastern Ontario had crops below normal, Northern Ontario had unusually good crops, and as a result some parts had seed barley and oats for sale as well as some small seeds, chiefly timothy and alsike mixtures.

INSPECTION

Inspectors visited 1,590 places, in many of which several different inspections were made. Inspections include 2,268 for seed, 578 for feed, 86 for fertilizer, and 18 for binder twine. A number of minor violations of the Acts were settled by satisfactory adjustments. One seed case was taken up in which judgment was reserved, although the offender was virtually found guilty.

The combined seed crop and cleaned seed competitions numbered 21. 15 with barley, 4 with oats, 1 with wheat, and 1 with red clover. There were 273 growers who had some 3,500 acres in registered crops which would yield at least

115,000 bushels of seed grain. Following are the quantities of seed finally inspected and graded for market:—

Seed	Reg. No. 1	Reg. No. 2	Reg. No. 3	Comm. No. 2
	bushels	bushels	bushels	bushels
Oats.....	1,462	429	613	5,600
Barley.....	1,070	2,334	1,162	70
Wheat.....	868	90		202
Totals.....	3,400	2,853	1,775	5,872

There were 133 bushels of red clover seed sealed and certified as No. 1 and No. 2 grades.

Markets information relating to commodities subject to inspection by Seed Branch officers was secured regularly and transmitted to the Markets Division.

Most of the educational work done was in co-operation with the provincial Departments of Agriculture. A number of meetings were attended in company with the Assistant District Weed Inspector for Eastern Ontario, who is charged with the enforcement of the Ontario Weed Control Act. These meetings were attended by weed inspectors, one for each municipality, and by road overseers and members of municipal councils. Lectures were given on some of the more prevalent weeds and those most difficult of eradication, with recommendations for control measures. The Seeds Act was also discussed as a means for preventing the spread of noxious weeds through the seeds of commerce.

Inspectors assisted the Ontario Agricultural Representatives in holding a number of their short courses, when lectures were given on the various Acts administered by the Seed Branch. They also gave assistance at examinations held in seed judging at the various judging courses for junior farmers, and frequently furnished the material for these classes. Several fall fairs were given assistance in judging the grain, field roots and garden vegetables, and at the Central Canada Exhibition and the Ottawa Winter Fair inspectors were active in arranging and judging of seed exhibits. The Central Canada Exhibition seed exhibits were practically doubled this year as a result of the inspectors' encouragement and support.

The two itinerary seed fairs held by the Ottawa Valley Seed Growers' Association, at Arnprior, and the Quinte Seed Growers' Association, at Napanee, were unqualified successes and will prove a great stimulus to good seed production in the future.

Considerable assistance was also given to seed cleaning plants in the district, and five more places are being served by one or more units, in addition to the twenty or more centres where such plants had been organized previously.

WESTERN ONTARIO DISTRICT

This district includes Old Ontario west of and including the counties of York, Simcoe, Muskoka and Parry Sound. The district office and seed laboratory are located in the Seed Branch building at 86 Collier street, Toronto. The personnel consists of the district inspector, one senior and six other inspectors, and a clerical staff. Three inspectors are stationed at convenient points in sub-districts. One man was transferred to the headquarters staff at Ottawa at the beginning of the calendar year. One inspector devotes his time to markets work, the remaining number being required to grade samples received at the laboratory, to inspect and grade hay and straw, to sample seeds being imported, and to inspect products required to be sold in accordance with the provisions of the various Acts administered by the Seed Branch.

SEED PRODUCTION AND SUPPLY

This district produces a wide variety of clovers, cereals, and other grain and forage crops, and in favourable years harvests seed of these in commercial quantities. There was a further increase in the acreage devoted to corn for husking over that of the previous year, due to the efforts put forth in the control of the European corn borer, and a considerable quantity was saved for seed. The red clover seed crop was one of the best harvested in recent years, for both yield and quality, and the prolonged dry season, while unfavourable from other standpoints, favoured the successful harvesting and threshing of the seed. With liberal stocks of good quality seed of this desirable forage crop, prices began at unusually low levels. The demand was accordingly stimulated, with the result that before seeding was over in the spring of 1930, seedsmen were obliged to import considerable quantities of foreign seed.

The alsike acreage kept for seed was much greater than usual, so that while some yields were unprofitably low, the total production was above normal. An unfortunate coincidence was the failure of the foreign market to absorb its usual quantity, or indeed more than relatively small amounts, which resulted in low prices and a considerable carryover.

Alfalfa was practically a failure from the standpoint of seed production, and the demand for seed in the spring of 1930 was met largely by imported stocks, principally from the northern United States and from Utah.

The amount of sweet clover seed harvested was also much below that of former years, owing chiefly to the carrying over of large quantities from previous seasons.

With an increase in the number of organized field crop and cleaned seed competitions a larger acreage was devoted to crops grown from registered grades, particularly of oats and barley. The yields of these were only fair, though weather conditions at time of ripening were favourable and the seed harvested was of good quality and sufficient in quantity to meet the spring demand. The fall wheat crop, especially in the northerly and westerly counties, was exceptionally good, ranging in yield from 25 to 50 bushels per acre. Hay was of exceptionally good quality, as there was little rain at cutting time to retard operations and impair curing.

The new seeding of red clover and, to a lesser extent, of alsike was adversely affected by prolonged dry weather during the summer and subsequently by considerable winter killing.

INSPECTION

Practically all commodities coming under the supervision of the Seed Branch are found in extensive quantity in this district. In addition to the seeds of local production there is a varied and important list of imported stocks, particularly timothy, field root and garden vegetable seeds, to which one inspector must devote the greater part of his time and attention, though close co-operation is had with customs officials.

Relatively few seeds are imported, but large shipments of Standard recleaned screenings are distributed, chiefly in areas within convenient rail haul from port elevators. Several large milling firms operate within the district, in addition to numerous smaller mills ranging from 75 to 200 barrels per day capacity, and there is an even greater number of manufacturers of mixed feeds.

Several important fertilizer manufacturers are located within this area whose output is, however, supplemented with importations of thousands of tons of superphosphate and mixed fertilizers from the United States.

The bulk of the binder twine manufactured in Canada is produced in three of the southerly counties, and in the same neighbourhood are located several manufacturers of agricultural poisons.

All of the aforementioned industrials are visited periodically by inspectors, and for further ensuring that the products are sold in conformity with the provisions of the respective Acts which govern their sale, systematic inspection is made after their distribution to the trade.

In Toronto the inspection of hay is an important part of the duties performed, requiring a liberal share of one inspector's time throughout the year.

Field inspection is made of cereals, corn, flax and clovers for registration or certification of the seed harvested, this work requiring, during the following winter, considerable time on the part of most of the inspectors for final inspection and sealing.

One prosecution was successfully conducted under the Seeds Act, and two lots of fertilizer were seized under authority of the Fertilizers Act and withheld from sale until properly labelled, while numerous parties were warned by letter of minor infractions of the various Acts.

Visits were made to 1,187 points and inspections included 1,468 seed, 659 feed, 400 fertilizers, 26 binder twine, 102 poisons, and 293 hay and straw. The total official samples taken by inspectors were 1,853 seed, 278 feed, 715 fertilizer, 114 binder twine, and 75 poisons. Field crops inspected totalled 2,591 acres, including 1,574 of oats, 613 of barley, 147 of red clover, and lesser areas of wheat, peas, flax, alsike, corn, soy beans, and alfalfa. There were 9,407 bushels of seed inspected for market as follows:—

—	Reg. No. 1	Reg. No. 2	Reg. No. 3	No. 1	Total
Wheat.....		126	236		362
Oats.....	4,078	1,693	1,050		6,821
Barley.....	1,495	326	170		1,991
Soy beans.....	1				1
Peas.....		45			45
Red clover.....				187	187
Total.....	5,574	2,190	1,456	187	9,407

Inspectors examined and graded 1,143 tons of hay and 87 tons of straw. There were 14,680 samples of seed analyzed. This included 1,043 samples for the seed drill survey. Total imports of seed were 12,652,597 pounds.

Revenues collected, amounting to \$3,675.34, were made up as follows: field crop inspection, \$271.16; seed inspection, \$347.16; hay and straw inspection, \$300; analysis of samples, \$2,757.02.

EDUCATIONAL WORK

This office continued to co-operate with the provincial department in connection with assistance for the Better Seed Train, seed meetings, short courses, etc. Inspectors met the competitors in combined seed competitions to discuss the placing of samples, and acted as judges at fairs and exhibitions. The district inspector attended regular meetings of the Ontario Crop Improvement Committee, which functions also as a provincial Seed Board. He also judged seed grain at the Royal Winter Fair, Ottawa Winter Fair, and others.

The success of the work accomplished by the seed drill survey of the previous year led to a more intensive survey being undertaken in the county of Oxford this year, 1,043 samples of seed grain being analyzed and graded at this office. Special field inspection of Mammoth red clover was conducted in Welland county and of red clover and alsike in the county of Simcoe.

MANITOBA DISTRICT

This district includes the province of Manitoba, with that part of Ontario which is west of lake Nipigon. The district office and laboratory are located at 812 Commercial Building, Winnipeg, and there is a sub-office at 211 Grain Exchange Building, Fort William, Ont. A district inspector, two senior inspectors, and four inspectors are employed.

SEED PRODUCTION AND SUPPLY

Spring conditions were normal, but cool weather predominated until June. Seeding commenced April 15 and was general April 23. In spite of an extremely dry growing season Manitoba harvested a wheat crop almost average in yield and of a much higher grade than usual. Barley yielded seventy per cent and oats about sixty per cent of average crops. In some of the less favoured districts there was a shortage of feed, and to a lesser extent a shortage of seed oats. In all parts of the province occasional crops of wheat on summer-fallow yielded from 25 to 30 bushels per acre.

The returns from grass and clover seed crops were quite varied. Brome represented the lowest yield experienced in the province for many years, and many crops were so light as not to be worth harvesting. Western rye grass yielded more seed per acre than brome. Although the former is a native crop which originated in Manitoba, there were few fields saved for seed, as its popularity is confined principally to the southwestern quarter of the province. Meadow fescue, more recently favoured in this province, has found its location as a suitable crop in eastern Manitoba and north of the Canadian Pacific Railway main line towards the park belt. A small amount of timothy seed was saved in the Swan River district and at other scattered points, but only to meet the needs of the growers as the price offered at present is not encouraging.

The dry, warm weather seemed ideal for the development of sweet clover, alfalfa, red clover and alsike seed. There is no centre specializing in the production of sweet clover, but many farmers saved enough seed for their own use and others saved amounts ranging from 3,000 to 80,000 pounds. This is a good showing as compared with last year, when at least eight carloads were brought in from Ontario and some from the south. Small areas of alfalfa were found scattered very widely over the province which gave seed of satisfactory yield and quality. Similarly red clover and alsike promised returns per acre far in excess of recent years; yet the production of these two crops is confined to the Dryden, Oxdrift, Kenora and Rainy River districts in northwestern Ontario, and to Piney, Beausejour and Whitemouth in Manitoba. Seed of red clover was distributed in the Swan River district as well as at Piney three years ago. The latter point now has a huller and threshed 30,000 pounds of seed in 1929; but in the north, although there was an excellent growth, clover was slow to set seed. At Dauphin, alsike clover, introduced two years ago, gave a good crop to those who saved seed this year.

INSPECTION

Inspection of crops for registration and certification in Manitoba and Northern Ontario necessitated visits to 126 points, 212 farmers, and 305 fields, totalling 5,224 acres. The estimated yield was 103,859 bushels of cereals and 52,475 pounds of brome. The following quantities of seed were inspected, graded and sealed during the crop year:—

	Reg. No. 1	Reg. No. 2	Reg. No. 3	No. 1	No. 2
	bush.	bush.	bush.	bush.	bush.
Wheat.....	1,870	8,077	134	14,906	103
Oats.....	5,973	9,786	821	338
Barley.....	2,189	1,100	188	35	481
Totals.....	10,032	18,963	1,143	15,279	584
Brome.....				lbs. 35,756	lbs. 6,440
Brome and western rye grass.....				650
Alsike.....				22,650
Red clover.....				1,260	530
Alfalfa.....				4,800
Totals.....				65,116	6,970

Inspectors visited 738 points, store and warehouse inspections totalling 1,878 for seed, 820 for feed, 45 for fertilizer, 268 for insecticides, 44 for binder twine, and 51 for hay and straw. These inspections resulted in taking 1,255 official or investigational seed samples, 190 feeding stuffs, 8 fertilizers, 59 binder twine, and 45 insecticides. There were 7,287 samples received from farmers and dealers and tested and graded at headquarters. Official feed, fertilizer and insecticide samples were sent to Ottawa for analyses. Customs samples totalled 1,888, representing 948,646 pounds of seed imported. In addition to wholesale and retail seed houses, the city freight sheds were visited frequently, and inspection of shipments in transit gave a check on the quality of seed marketed. Improvement was noted in the quality and purity of seed shipments, and only one prosecution was necessary under the Seeds Act.

Revenue collected totalled \$3,380.25, made up as follows: analysis and testing of samples, \$1,147.25; hay inspection, \$3; field crop inspection, \$969; seed inspection, \$1,260.50; and weed seed collection, 50 cents.

Attention was paid to seed offered for sale by seedsmen and farmers. Those advertising without a grade were written to, also the medium of journal carrying such advertisements. The principal criticism of farmers' shipments of seed was their lack of uniformity. The need was stressed for taking representative samples for grade and always shipping up to sample. The germination of vegetable seed in paper packets showed a few firms to be rather delinquent in labeling packets which were below minimum standard. Feed samples were found satisfactory. As usual, only a few fertilizers were found on this market. These were sampled and found to comply with manufacturers' guarantees. Increased interest in fertilizers was noted, probably due to the wide investigations being conducted by the Consolidated Smelters. Binder twine was sampled in advance of the season at large warehouses in Fort William and Winnipeg. All brands were found to come well within the margin of tolerance as to length per pound guaranteed, being an improvement over last year. Insecticides and poisons were checked very closely. Old stocks were objected to and registrations insisted upon, as it was felt that the Agricultural Pests Control Act had been sufficiently long in effect for manufacturers to be aware of its requirements.

Attention was given to securing information regarding supply and demand of commodities falling within the scope of the Seed Branch.

EDUCATIONAL AND DEVELOPMENT WORK

Lectures were given by the district inspector and inspectors at seed growers' meetings, short courses, and classes at the Agricultural College, and press articles and a radio talk prepared on the subjects pertaining to Seed Branch

activities. The district inspector continued as secretary of the Manitoba Seed Board, acted on several committees for better seed promotion, and judged seed at the Royal Winter Fair, Toronto, and the Provincial Seed Show, Brandon. A short article on alfalfa was prepared for enclosure with all reports of analyses of grain samples, with a view to improving next year's feed supply on Manitoba farms. A list of graded seed for sale, on which owners had stated quality and price, was prepared for use in answering inquiries. Clover seed production was encouraged by field inspection of alsike and red clover for certification as to freedom from bladder campion. In addition, a number of pound samples of Manhardy and Altaswede single-cut clover were distributed to boys in the Swan River district. An inspector assisted with seeding these samples and called on the co-operators in the fall, when a good catch was noted.

A seed drill survey was again made, but was confined to single townships in each of the four representative districts, the result of which showed room for improvement in the cleaning of home-grown seed supplies and an opportunity for further development of community seed-cleaning plants.

SASKATCHEWAN DISTRICT

This district comprises the province of Saskatchewan, with the district offices and laboratory located at Saskatoon. The personnel of the inspection staff consists of the district inspector, four inspectors, and a clerical staff. One inspector is stationed at Regina and another at Moose Jaw, while the remainder work out of Saskatoon. Two additional inspectors are employed during the rush periods.

SEED PRODUCTION AND SUPPLY

The quality of seed for use in the spring of 1929 suffered considerably by frost. Farmers, however, made an effort to obtain the best seed possible, with the result that very few cases were noted in which crop failure was due to poor germination. The popularity of Garnet and Reward wheat again increased in northern Saskatchewan. There seems also to be an increasing demand for the so-called "Sixty-Day" barley, and some of the earlier oats such as Alaska and Gopher.

Very promising weather conditions prevailed during the seeding season; but shortly afterwards the crops over a large part of Saskatchewan began to suffer from drought. The low precipitation, coupled with hot, dry, windy weather, resulted in low yields of all grains in southern and central Saskatchewan (with the exception of a fairly large district around Rosetown) and the extreme northwest portion of the province, where there was sufficient moisture to mature a good yielding crop.

Harvesting commenced earlier than usual, and ideal weather resulted in a good appearing sample of wheat, although the quality varied considerably in the dry areas, according to the degree of shrunkness and number of broken kernels. Taking the province as a whole, there was no shortage of seed barley or wheat for the spring of 1930; but the oat crop was so far below that approximately 250,000 bushels of seed oats were obtained from northern Saskatchewan and Alberta. The demand for top generation registered wheat, oats, and barley for the spring of 1930 was unusually keen, and all such stocks were placed early in January.

INSPECTIONS

There was an increase in seed crop inspections of registrable varieties, also of varieties of grains inspected with a view to certifying the resulting seed as to purity of variety. There has been a decided improvement in the purity of the fields inspected. Brome and western rye grass inspections, made in order

to certify approved seeds as free from couch, decreased in number. Inspection of seed crops other than brome and western rye necessitated visits to 391 points, 722 farmers, and 1,226 fields, totalling 36,998 acres. Visits were made to 12 farms with 924.25 acres of brome and western rye. From these crops the following quantities of seed were inspected, graded and sealed in the sack, totalling 140,749 bushels and 66,929 pounds:—

—	Reg. No. 1	Reg. No. 2	Reg. No. 3	No. 1	No. 2	No. 3
	bush.	bush.	bush.	bush.	bush.	bush.
Wheat.....	25,691	16,158	8,251	15,876	505	78
Oats.....	15,742	17,650	6,477	3,743	10,559	4,382
Barley.....	3,399	1,638	1,031	6,478	658	
Flax.....	1,491	471		397		
Rye.....					74	
Totals.....	46,323	35,917	15,759	26,494	11,796	4,460
	lbs.	lbs.	bls.	lbs.	lbs.	lbs.
Sweet clover.....	248	6,557	82	17,992	4,357	
Alfalfa.....	5,372			309		
Brome.....				19,266	1,146	
Western rye.....				11,600		
Total.....	5,620	6,557	82	49,167	5,503	

In addition to the above, seed inspection certificates were issued covering 16,513 bushels of seed oats inspected from quantities taken into storage by the provincial government.

Inspectors examined and graded 221.36 tons of hay. There were 9,704 samples of seed tested, graded and reported, which includes 2,880 samples from the seed drill survey. Seed importation amounted to 114,960 pounds, the samples of which are also included above.

The total number of points visited was 1,144, and inspections included 2,432 seed and field crops, 357 feed, 10 fertilizer, 6 binder twine, 25 hay and straw, and 778 insecticides and fungicides. These visits resulted in the taking of 558 official seed samples, 54 feed, 5 fertilizer, 14 binder twine, and 216 insecticides. The total number of seed samples mentioned includes official samples on all registered seed lots sealed.

Extensive correspondence was carried on with vendors whose products failed to meet the requirements of the Act, and with seed advertisers whose advertisements were misleading or not properly worded. The great majority of the offences were due to ignorance of, rather than to any desire to evade the regulations.

Rapid development in seed cleaning and marketing organizations has rendered it necessary that inspectors devote a liberal portion of their time to seed work. The new seed cleaning plant in Moose Jaw requires an inspector to be stationed there from early fall until late spring.

One inspector is required to devote particular attention to market reporting.

Revenue was collected as follows: analysis and grading, \$854; hay inspection, \$67.08; field crop inspection, \$4,700.76; seed inspection, \$3,658.66; total, \$9,280.50.

INVESTIGATIONAL

Seed drill survey samples, totalling 2,880, were analyzed and reported on, and a check was made on the germination of packet seeds of roots and vegetables. To determine their purity of variety, samples from bulk lots of seed grain which had been sealed under registered grades, were planted in observation plots at the university.

A study was made of the prevalence of loose smut from the field inspection reports on Reward wheat.

EDUCATIONAL

The district inspector judged at provincial seed fairs at Saskatoon and Regina, and judges were supplied from the inspection staff for a number of smaller seed fairs. Numerous articles and addresses were given on subjects relative to our work. A member of the staff has attended all meetings of the Saskatchewan Seed Board, and the district inspector is a member of the Saskatchewan Committee to further the interests of the World's Grain Show to be held in 1932.

Visits were made to seed growers in the Birch Hills, Pontrilas and Codette districts, where the Branch introduced numerous varieties of high grade seed of timothy, blue grass, alfalfa, and Alaska oats. The grasses were found to be in good, healthy condition and appeared suitable for the districts, but the growers felt that crops were unprofitable due to the difficulty in marketing. Some fields of alfalfa in the Pontrilas district were especially promising, and Alaska oats, because of their earliness, may become popular.

ALBERTA AND BRITISH COLUMBIA DISTRICT

The organization in this district includes an inspection office and seed laboratory at Calgary, and a sub-office at Vancouver. Five permanent inspectors, one of whom is a specialist working on field root and vegetable seed production in British Columbia, are employed under the district inspector. One inspector is required to assist in the office and take charge of grading. The others work throughout the district and are assisted by two temporary inspectors during the busy seasons. One inspector in each province is assigned to market reporting. The district work includes the grading and reporting of samples of seed received for analysis; examination and grading of bulk and sacked seed grain; seed crop inspection; seed, feed, fertilizer, hay, straw, binder twine, insecticide and fungicide inspection, and investigation of seed supply. During the year 10,809 samples of seed were received for testing and grading, a noteworthy feature being the large number of requests for grades. Microscopical analysis was made on 92 samples of feeding stuffs. The total revenue collected was \$6,380.24, of which \$4,715.74 was for inspection service.

SEED PRODUCTION AND SUPPLY

Cereals were seeded under favourable conditions, but during July these crops suffered from drought, which caused them to ripen early and harvesting was completed before frost. Yields were light on the average throughout Alberta, but the quality was better than usual, with the exception of the weight per measured bushel, which was below average. Alberta had a surplus of seed oats. About 250,000 bushels of this were absorbed by the drought areas in Saskatchewan. Our inspectors sampled 564 cars in order to secure sufficient quantities of suitable quality.

Late rains in July and August and the delay of frost enabled much lowland hay and green feed to mature. Grimm alfalfa seed production in the Brooks district totalled 300,000 pounds, of which 196,347 pounds were registered. The greater part of this seed was marketed in Ontario. Timothy seed in the Pincher Creek district was about one-quarter of the production last year, being about 500,000 pounds, all of which was successfully marketed. This crop was a failure in central British Columbia. Sweet clover is rapidly gaining in favour in Alberta, due to the tendency toward more mixed farming.

The central portion of British Columbia suffered from drought, with the exception of the Prince George district, where crops in general were good and hay was very heavy. In the Bulkley valley and lakes districts seed of Chewing's fescue and perennial rye grass was distributed to certain growers. Distribution of the two-cut red clover is also being made.

In the Sumas district of British Columbia 248,625 pounds of red clover and 32,000 pounds of alsike seed were produced. As this red clover is not considered sufficiently hardy for eastern conditions the market is very limited and growers were obliged to carry over considerable quantities.

Most of the vegetable seed production in British Columbia is on contract for British seed houses. Individual growers are producing profitably in this way; but the problem of marketing seems to be the greatest obstacle to small producers. The quality of vegetable seed produced this season was very good and yields were high. About 445 pounds of onion seed have been graded Registered No. 1, which is the first instance in Canada of this kind of seed being so graded. It is estimated that some 1,250 acres are producing field root, garden vegetable, and flower seeds, of which approximately one-half are flower seeds. The season's production of field root and garden vegetable seeds amounted to 184,600 pounds, of which 164,380 pounds were garden peas, 5,190 pounds mangel, 3,620 pounds bantam corn, 4,215 pounds onion, 4,400 pounds beans, 1,400 pounds lettuce, the balance of 1,395 pounds being comprised of smaller quantities of celery, beets, turnips, cabbage, radish and broccoli.

INSPECTION

The amount of correspondence with relation to the administration of the several Acts has continually increased. As many of the manufacturers of feeds, fertilizers and insecticides are located in British Columbia the need for a division of the district is increasingly evident.

Inspection of seed crops was made on 538 fields of cereals and 110 fields of alfalfa, the acreage being 14,905 and 2,470 respectively. Field inspection was made of the following vegetable seed and field root crops, mangel, swede, onion and carrot.

An increasing number of requests is being received for seed inspection on growers' premises. Inspectors took samples in eighteen grain competitions and one clover competition, and the following kinds and quantities of seed were eventually graded:—

—	Reg. No. 1	Reg. No. 2	Reg. No. 3	No. 1	No. 2	No. 3	Rejected
	bush.	bush.	bush.	bush.	bush.	bush.	bush.
Wheat.....	9,428	4,305	1,380	7,934	1,222	843
Oats.....	17,571	6,289	7,103	24,127	60,093	18,156	4,300
Barley.....	5	191	83
Totals.....	27,004	10,785	8,566	32,061	61,315	18,999	4,300
	lbs.	lbs.	lbs.	lbs.			
Alfalfa.....	76,317	101,595	18,435
Brome.....	8,100	(certified)
Western rye grass.....	2,750	(certified)
Onion.....	445
Totals.....	76,762	101,595	18,435	10,850

Inspectors visited 1,613 points; 2,966 inspections were made under the Seeds Act, and 286 official samples were taken, the quality of which indicated that seedsmen generally are complying with the Act. Faulty advertisements of seed for sale in local papers and the farm press were brought to the attention of the advertisers and corrected.

Under the Feeding Stuffs Act 1,634 inspections were made and 476 samples taken. The largest proportion of violations was in connection with the sale of feeds containing ground screenings.

Fertilizer inspections numbered 328, with 156 official samples. Most of our manufacturers are meeting the terms of the Act, but it was necessary to make several seizures pending corrections in labelling.

Inspections under the Agricultural Pests' Control Act numbered 731, with 24 official samples. As this is a new Act most of our work has been educational.

Hay and straw inspections numbered 43. Only 132 tons of hay were graded under certificate, but considerable time was spent with growers and co-operative organizations, instructing them in quality standards.

Binder twine inspection required 55 visits and 71 samples were tested. Improvement has been observed during the year in respect to the labelling of binder twine by manufacturers.

EDUCATIONAL

Press articles were prepared, radio talks given, and meetings of farmers, weed inspectors and various associations interested in agriculture were addressed by the district inspector. Judging was done at various seed fairs, and branch exhibits were shown at the Alberta Seed Fair and Calgary Exhibition. Inspectors gave courses of lectures dealing with various phases of Seed Branch work to agricultural students at provincial schools of agriculture, and addressed several farmers' meetings. The district inspector acted as chairman of a committee, consisting of Wheat Pool and Provincial and Federal Government representatives, to organize junior crop competitions, and 485 boys and girls entered and were supplied with registered seed free. He also acted on provincial Seed Boards in Alberta and British Columbia, and was a member of the awards committee for the World's Grain Exhibition and Conference.

INVESTIGATIONAL

In co-operation with provincial authorities experiments are being conducted with "Chemical Weed Killer." Plantings have been made of samples taken from all registered varieties of wheat, oats, barley, rye and flax, for plot observation. A study is being made of germination results with peas, and seed from off-type heads of oats and wheat, and of various kinds of wild oats as well as of several grasses and legumes, has been planted in plots for the purpose of studying the resulting growth. Seed drill surveys were again conducted in British Columbia.

THE ENTOMOLOGICAL BRANCH

As in former years, the work of the officers of this branch has continued to develop with increasingly valuable results. Achievements from years of research in the biology and control of injurious insects, conducted by federal entomologists, are every year becoming more and more apparent, particularly in the known savings to crops of all kinds, as well as to other commodities which are subject to insect injury.

The following is an account of the work of the Branch during the year ended March 31, 1930.

DIVISION OF FIELD CROP AND GARDEN INSECTS

The losses from insects during 1929 to field and garden crops in general approximated those of 1928 and were at a relatively low level considering the Dominion as a whole. Owing to the peculiar weather conditions insects in the Prairie Provinces were not as injurious as expected but grave concern is felt in regard to 1930, the dry conditions of 1929 being very favourable for the increase of some of our most serious pests of prairie agriculture. Insect losses in Eastern Canada were about normal, the peculiar weather conditions of the year being

responsible for noticeable increase in injurious numbers of certain insects not usually of great consequence and the absence of others usually of economic importance.

Lest it might be thought that, in a year comparatively free from spectacular outbreaks, insects are of minor importance to Canadian agriculture, it may be mentioned that a conservatively estimated loss to the wheat crop alone in Saskatchewan from three major insect pests in 1929, attained a total of \$10,012,000; furthermore the estimated savings to the sugar beet growers resulting from a local control campaign in Alberta was \$26,000. The sum of \$5,900 saved upon one farm alone, in the latter province, in demonstrating the value of control practices recommended for the wheat stem sawfly.

Research investigations carried on by officers of the Division of Field Crop and Garden Insects have progressed most favourably, distinct advances of practical value being made in connection with many of the studies.

Two items of special interest in the development of the work deserve particular mention: (1) the fact that the prairie insect situation has become sufficiently well known resulting from studies incepted during the last few years to make it possible for our officers to anticipate the probable insect conditions for 1930 and (2) the establishment, in co-operation with the Statistics Branch of the Saskatchewan Department of Agriculture, of an annual estimate of the losses to wheat due to the major insects in that province, namely, wheat stem sawfly, cutworms, and wireworms. These advances are the culmination of several years' work, and will, undoubtedly, be of very great direct value to agriculture.

Studies of the grasshopper situation indicated that these insects are definitely on the increase and may reach outbreak conditions in 1930 in Prince Edward Island, each of the Prairie Provinces, and in range areas of British Columbia, necessitating organized control campaigns. The study of the bronze cutworm in New Brunswick indicated a decreased loss from this insect upon the marshes already attacked, but a possibility of their spreading to adjacent areas. A most unusual outbreak of the greasy cutworm over a large part of New Brunswick was carefully studied in order that advice regarding its control may be given should it recur in 1930. Carrot rust fly studies have yielded control recommendations, the adoption of which will be of great value throughout Eastern Canada. The investigations of the European corn borer again indicated that winter conditions in Quebec and Ontario do not affect the insect adversely and that the farm cultural control practices will be necessary throughout the infested areas. Weather conditions during the moth flight known to be of importance in controlling the abundance of the borer were under special observation in 1929. A study of the best farm implements and their use for maximum effect in control upon the ordinary farm was continued and the great value of the disc harrow in the preparation of stubble for ploughing was demonstrated.

An extension of the study of white grub infestations in Quebec province indicated that these insects were the cause of serious damage to a large variety of farm crops over a very wide area. Control results from the use of soil fumigants have promise of wide application, particularly to the higher-priced crops. In the continued study of the biology of the cyclamen mite, a promising method of treatment for young strawberry plants to prevent the distribution of the mite with the young plants was discovered.

The association of severe infestations of onions by the onion maggot with certain soil types was determined and it is hoped these studies will lead to a simplification of field control measures for this pest. Cutworm investigations with a variety of species carried on throughout the Dominion, indicated in Eastern Canada, with certain species, the close association between cropping

practices and abundance of the cutworm and the great importance of certain weeds as a food supply for cutworm moths. Both discoveries will probably have a direct application in control work. Similarly, in Western Canada, farm cultural control practices of handling both the crop and the soil were found to be most important in protecting sweet clover and other crops from loss by the bertha armyworm.

During the year encouraging progress was made in the studies of prairie crop rotation and insect abundance, as well as in the studies looking to the control of wireworms. Field tests associated with the latter are in progress and include observations on summer-fallow, types of seeding machinery, substitute crops, and poisoned bait practices. Wheat stem sawfly studies were productive of extremely significant results. The use of brome grass grown in association with wheat as a trap crop and its cutting for hay at a certain definite period not only greatly reduced the number of insects and the amount of damage to the wheat but increased the effect of native parasites in still further reducing the number of insects and their damage to the wheat. This is a circumstance of the greatest promise in the farm control of this pest on a very wide area. Numerous other studies of local importance have been in progress in connection with many of which satisfactory progress can be reported.

Increased use of the officers at the field stations was made during the year by direct call and correspondence from farmers and others seeking advice in regard to insect control. Distribution of information by addresses, by radio, through newspaper items and seasonably-timed circular letters to lists of correspondents, was continued when such was felt to be useful. Scientific papers giving details of studies were contributed to technical journals by officers of the Division.

During the year co-operative activities with other related Dominion and provincial services, such as the Experimental Farms System, the Irrigations Branch and National Parks Branch of the Department of the Interior, the local Departments of Agriculture and the agricultural colleges, were undertaken and satisfactory progress made.

DIVISION OF FOREST INSECTS

Investigation of airplane dusting for the control of defoliating forest insects was continued during the summer of 1929 on three areas in Eastern Canada and on one in British Columbia, and the method may now be considered perfected to the degree of usefulness.

Commencing in 1927, the Division of Forest Insects and the Dominion Air Service, in co-operation with the provincial Forestry Services, experimented with this method of control in the provinces of Nova Scotia, Quebec, and Ontario. In the preliminary experiments, conducted in 1927 and 1928, a small, single-engined plane was employed and the dust was applied in different doses on plots 1,000 feet in length. Outbreaks of the spruce budworm were treated in these experiments.

In the summer of 1929 a more extensive experimental operation on a spruce budworm outbreak in Ontario was conducted, and the technique of the operation under our forest conditions was finally perfected to a very satisfactory degree. For the 1929 experiments the Dominion Air Service provided a Ford tri-motor plane capable of carrying nearly one ton of dust. It was found that the spruce budworm was very resistant to control by poisoned dusts, and further experiments are required before this method can be recommended for the control of outbreaks of this insect.

A second dusting operation, carried out in 1929 in the province of Quebec for the control of a hemlock looper outbreak on a stand of balsam fir and spruce, gave very satisfactory results. In this operation, 15 tons of calcium arsenate

dust were distributed on about two and a half square miles, at rates varying from 10 to 20 pounds per acre. The dust was applied, during suitable weather conditions, at the rate of about one ton of dust per hour. The degree of control obtained in this case was practically perfect. Later examinations of the dusted area during the normal time of the moth flight disclosed that very few moths were to be found, so that the operation can be described as completely successful.

During the same period a similar operation was conducted by the Ontario Forestry Branch, in co-operation with the Dominion Division of Forest Insects, for the control of a hemlock looper outbreak in valuable areas of hemlock in the Muskoka region of Ontario. About 20 tons of calcium arsenate dust were distributed and the degree of control obtained was entirely satisfactory.

A third airplane dusting operation on a small scale was conducted in 1929, under the direction of the Dominion Division of Forest Insects and the Dominion and provincial Forest Services, on a hemlock looper outbreak in British Columbia, with the same very satisfactory results.

At present it may be said that airplane dusting can be utilized profitably in Canadian forests for the control of certain types of insect outbreaks. This method will be most useful in the control of outbreaks of insects like the hemlock looper, which appear on small areas and spread rapidly over extensive stands of timber, and in which the insects feed in an exposed condition on the foliage. This method cannot yet be recommended for the general control of outbreaks which develop rapidly over a wide expanse of forest at nearly the same rate; but even under these conditions the better stocked and more valuable stands can probably be saved by airplane dusting.

Further investigations are required, particularly with different types of insect infestations; a more suitable type of airplane is needed; and improvement, in the poison dusts designed for forest dusting is very desirable. But, at the least, there is now available a weapon with which some forest insect epidemics may be fought or prevented, and its efficiency may be expected to increase with its use.

Biological investigations of the spruce budworm were conducted at Westree, Ont. This extensive outbreak is spreading steadily to the west and south.

The hemlock looper outbreak on hemlock stands in the Muskoka Lakes area subsided to a marked degree during the summer of 1929. The airplane dusting operation for the control of this outbreak already described covered the greater part of the infested territory and was very effective in destroying the caterpillars.

The extensive outbreaks of hemlock looper in balsam stands along the north shore of the gulf of St. Lawrence, reported in 1928, were the subject of investigation in 1929 conducted by our officers with the co-operation of the Quebec Forest Service. The principal study was made on the Trinity watershed with supplementary studies and surveys on the Pentecost and Manicouagan watersheds. The habits of the insect, the degree of injury caused by it and a great deal of valuable data, has been obtained. The outbreak subsided noticeably on the Trinity watershed and was completely controlled by the dusting operation at Manicouagan. At Pentecost, however, the outbreak continued to spread and further biological studies are desirable on this area in 1930.

An outbreak of sawfly larvæ on jack pine has spread during the last few years throughout a great part of central Ontario and in western Quebec. In the region of lake Kipawa the injury has been severe. Surveys made by our officers in 1929 have determined that the outbreak is of sufficient importance to require thorough investigations which are being planned for 1930.

In 1929, an outbreak of a defoliating caterpillar, the balsam tip moth, was investigated by our officers in the southern part of Cape Breton Island in con-

junction with the Nova Scotia Department of Lands and Forests. Severe defoliation had occurred over some 200 square miles and our officers plan to conduct a thorough investigation of the outbreak in 1930 directed toward the possibility of control measures and salvage.

The larch case bearer has become a major pest of tamarack throughout a great part of Nova Scotia and New Brunswick during the past two years. The birch sawfly leaf-miner has become a major pest of birch stands throughout New Brunswick and Nova Scotia. The severe defoliation has checked the growth of the trees in many parts of this area, but without, as yet, causing any noticeable mortality. The hemlock borer has become very abundant in the proximity of valuable hemlock stands in Nova Scotia. The progress of these infestations will be watched carefully by our officers in 1930.

The larch sawfly was noticeably less abundant in 1929 than in recent years in the Maritime Provinces. In parts of Ontario outbreaks of the sawfly are still spreading.

The European beech scale and the European balsam woolly aphis are continuing to spread throughout Nova Scotia and in Westmorland and Albert counties in New Brunswick. The European beech scale is widely distributed in Prince Edward Island.

The investigation to fir-killed trees and logs caused by wood-borers was continued in 1929. The new method of control by distributing lime sulphur dust over piles of logs left in the wood exposed to beetle attack throughout the summer was subjected to further tests and as in the past gave satisfactory results.

Investigation on the parasites of certain forest insects, particularly of the larch sawfly, was conducted at the parasite laboratory at Belleville. A further distribution was made of the European parasites of the larch sawfly.

An investigation of insects affecting forest nurseries and forest plantations was undertaken in 1929 in co-operation with the Quebec Forest Service. An officer was appointed for these investigations and stationed at the Forest Nursery at Berthierville, P.Q.

Insects affecting shade trees in Eastern Canada were investigated from the laboratories at Ottawa, Ont., Fredericton, N.B., and similar injuries in British Columbia were investigated from our laboratories at Vancouver and Vernon. Shade tree investigations in the Prairie Provinces were continued as a special project from the Indian Head, Sask., laboratory. One of our officers stationed at this laboratory, working in co-operation with the Tree Planting Division of the Dominion Forest Service, investigates shade tree insect injuries occurring on the prairies and advises owners of shade tree plantations with respect to methods of control.

The satin moth outbreak in British Columbia was surveyed by officers of the Branch last year and was found to have extended northward up the coast of the mainland to Sechelt and Powell rivers; Vancouver island as far north as Campbell river and Port Alberni on the west coast; inland from Vancouver the caterpillars were found as far east as Hope and McGillivray falls and adult moths were taken at North Bend and Lillooet still farther inland.

An important fundamental study of the relation of biologic and climatic conditions to forest insect outbreaks has been in progress for the last two years at the Merivale laboratory near Ottawa with a two-fold object in view. An intensive study is being conducted on insects affecting the sugar maple with special reference to the maple leaf cutter and an attempt is being made toward the development of certain scientific methods in the study of forest insects with special reference to the defoliating species. The investigation is chiefly concerned with the causes underlying the rise and course of great insect outbreaks.

The control operations for bark-beetles affecting yellow pine in southern British Columbia were brought to a successful conclusion two years ago and it

is gratifying to be able to report that the outbreaks have been completely checked, no control work having been required in 1929. An operation for the control of bark-beetles in lodgepole pine was carried out last year with excellent results. In co-operation with the federal and provincial Forest Services forest insect surveys have been conducted by our officers in many parts of the forest. A particularly extensive survey was conducted on the eastern slopes of the Rockies and is being continued in 1930.

Hemlock looper outbreaks have occurred in stands of western hemlock at several places on the southern coast of the mainland in British Columbia, particularly at Indian river, Capilano valley, Seymour valley, Mill creek, Gold creek and at Stanley park in Vancouver. The outbreak at Indian river was treated by airplane dusting in 1929 with very satisfactory results.

The black-headed tip moth occurred last year in outbreak form on several areas in the southern coast of the mainland of British Columbia. The injury has extended somewhat since last year; but has not yet caused any important injury.

The spruce budworm has occurred in outbreak form on five areas in British Columbia during the last few years. In 1929, two of these outbreaks disappeared almost entirely and on the other three areas the injury appeared to be subsiding. In connection with one of these outbreaks in the Barkerville district the balsam bark-beetle has multiplied rapidly and killed a large quantity of timber.

In connection with the Trail Smelter Fumes Investigation, one of our officers spent a considerable part of the summer of 1929 investigating the relation between insect injury and smelter fumes on the area in question in co-operation with the National Research Council.

Investigations on the biology of important forest insects have been continued from our laboratories at Fredericton, N.B.; Ottawa, Ont.; Indian Head, Sask.; Vernon, B.C.; and Vancouver, B.C. Our knowledge of the habits of many species of forest insects and their relations to the health of the trees they attack is being extended each year by the discoveries made in the course of the work.

Studies in taxonomy and morphology of forest insect groups were conducted again as usual by certain of our officers during the winter months.

DIVISION OF FOREIGN PESTS SUPPRESSION

The work of the Division of Foreign Pests Suppression was conducted along the same lines during the year, as had been followed previously, although in many features, expansions added materially to the number of investigations and the volume of work performed. The lines pursued were: the administration of the Destructive Insect and Pest Act and regulations thereunder, the issuance of permits covering all importations of nursery stock, the inspection of such importations, the maintenance of quarantines, the application of control methods of foreign pests which have been found to have obtained a foothold in Canada, and the scouting of various areas in the Dominion for possible new infestations.

PLANT INSPECTION SERVICE

In the report of last year it was noted that four new plant inspection stations had been established, namely, at Halifax, N.S., Windsor, Ont., Winnipeg, Man., and Estevan, Sask. Ottawa was also made a port of importation. At the same time Regulation No. 1 (Foreign) which contains the general conditions governing the importation of nursery stock into Canada from all countries was revised and all importations of nursery stock are subject to reinspection upon entry, irrespective of the country of origin.

For the year of report it might be said that the above new inspection points have functioned very satisfactorily, and have amply demonstrated the need of their establishment in order to handle adequately and promptly the amount of nursery stock entering Canada, which is increasing yearly. Some difficulty was encountered at first, largely owing to the change in regulation as affecting imports from the United States, with regard to character of inspection certificate from the country of origin required under the revised regulation and the requirement that all shipments of nursery stock for Canadian points, must enter through one of the ports of importation as specified in the regulation.

It may be said, however, that United States nurserymen, and indeed those of all other countries have apparently become very generally familiar with our requirements, and little difficulty along the above lines has been experienced during the latter half of the year.

Some idea of the growth of the work in quantity of nursery stock inspected may be obtained from the statement that in 1919, the year the Division was formed, a total of 876,466 plants were examined, whereas in 1929 the total has risen to 48,044,686 plants entering Canada from all other countries, this being an increase of almost five million plants over the preceding year. The value of this stock as given by the report of the Department of Trade and Commerce is \$1,538,103, an increase of almost \$250,000 over the previous year's total valuation.

To cover the above importations 15,806 permits were issued, and the number of inspections of nursery stock carried on amounted in all to 9,316, an increase of 2,797 inspections over the former year. Interceptions of diseased plants or of insect pests amounted to 908. The pests intercepted included caterpillars, scale insects, borers, bulb flies, mites, plant diseases of various kinds, etc. In sixty cases plants were prohibited entry into Canada under some one of the regulations under the Destructive Insect and Pest Act. In 504 cases shipments were returned to the consignor owing to the fact that they were not properly inspected for pests and diseases in the country of origin.

Inspection of mail parcels amounted to 2,966 examinations of 3,515 containers in all. The plants so brought in amounted to 383,244.

As in previous years, passenger boats were visited by an inspector who examined such plants as were found in passengers' baggage. During the year of report 3,967 boats (an increase of 345) were so visited; 182 passengers were found to have plants with them. Among the interceptions made were some twenty-five instances of potatoes being brought in from Europe. These were confiscated under Regulation No. 3 (Foreign).

Ministerial authorization was granted in four cases for the importation of plants for scientific and research purposes, which otherwise would have been prohibited entry.

Exports of nursery stock amounted to 542 shipments, these being sent to twenty-one different countries. These figures represent a small decrease in the number of export certificates issued, but cover an increase of some 300 per cent in the quantity of nursery stock sent out. The material inspected and passed consisted of 245,361 bulbs, 403,661 ornamentals, 130,335 fruit trees, 15,683 conifers, 5,817 pounds of tree seed, 1,000 pounds of onion sets, 1,000 square yards of sod and 97 vegetable roots.

As in former years, the Division of Botany of the Experimental Farms Branch of the Department has co-operated in the identification of plant diseases intercepted by the inspection service, and sent to Ottawa for a report.

As to inspection of imported plant products, every endeavour is made to inspect these as completely as time and staff will permit, and an increase in the number of inspections made is regularly noted. During the year ended March 31, 1929, a total of 11,489 inspections of plant products were made, an increase of 4,935 over those of the year before, consisting of 3,154,463 containers

of commodities of all kinds from different countries, the gain in containers of all sorts examined being 1,173,405. In this work sixty-one interceptions of insects and plant diseases were made.

The total number of inspections during the year, in all projects was 21,451, an increase of 7,627 over the previous year. In addition 63,000 bushels of seed corn were examined in connection with the European corn borer quarantine.

The Brown-Tail Moth.—The inspection of orchard trees and other host plants for the nests of the brown-tail moth was continued in Nova Scotia in the most important districts during February, 1930. The area examined included sections of Yarmouth, Digby, Annapolis and Kings counties. It is a pleasure to report that no outbreaks of this insect were discovered. Scouting for the same pest was also carried on in the St. John river valley in New Brunswick, as well as in certain sections of York and Charlotte counties with the same encouraging results.

The European Apple Sucker.—The distribution of this pest in North America is confined to the Maritime Provinces. In an effort to prevent spread a quarantine is maintained on the movement of host plants. Scouting of areas bordering the known infested territory is carried on each year. Previous to 1929 this pest was confined to the provinces of Nova Scotia and Prince Edward Island and the counties of Westmorland and Albert in New Brunswick, but in that year a local outbreak was discovered at Westfield in Kings county, N.B., resulting in a revision of the quarantine to meet the condition.

The European Beech Scale.—This insect was discovered in Nova Scotia some years ago and has since spread into the counties of Westmorland and Albert in New Brunswick. Serious injury has resulted to the native beech. During 1929 observations were carried on by this Division in co-operation with the Division of Forest Insects to ascertain the spread of this pest in eastern New Brunswick. Slight westward spread and a general increase in the degree of infestation in the previously infested stands were noted.

The Gypsy Moth.—In 1924, the only outbreak of the gypsy moth in Canada was discovered near Henrysburg, P.Q., through organized scouting by officers of this Division in co-operation with the Quebec Department of Lands and Forests. As a result of eradication measures applied that year and the two succeeding years, this very serious outbreak was apparently completely eradicated, as no signs of the insect have been found since 1926.

Realizing the danger of similar outbreaks occurring in southern Quebec, as a result of spread from the areas infested in the New England States, scouting of the most important districts has been carried on each year. In 1929 special attention was given to the examination of tree growth along the major highways, a total of one thousand miles being scouted.

The European Corn Borer.—This insect was first discovered in southwestern Ontario in 1920; since that time it has spread as far west as Sault Ste. Marie in Ontario and eastward in Quebec very nearly to Quebec city. In 1928 an outbreak of the double brooded strain was found at several points in the St. John river valley, New Brunswick, and in 1929 a light but generally scattered infestation was found throughout the Annapolis Valley in Nova Scotia. The infestations in New Brunswick and Nova Scotia are not due to spread from Quebec, but, apparently to spread from the New England states where the double brooded strain occurs. Up to the present time no serious damage has been done to corn in either New Brunswick or Nova Scotia. In so far as Ontario and Quebec are concerned, the provincial Departments of Agriculture are requiring control operations to be carried out in the more heavily infested districts.

A quarantine has been placed on the infested areas, Ontario and Quebec being treated as one area and the three Maritime Provinces as a second area.

Corn and its products may not be moved from one area to another, or to points outside an infested area. Provision is made however, for the movement of shelled corn provided it is cleaned and accompanied by a certificate of inspection.

The Mexican Bean Beetle.—This insect was first found in southwestern Ontario in 1927, having gradually worked its way north from the southern United States. In that year ten local outbreaks were found in Kent, Essex, Elgin, Halton and York counties. In 1928 a comparatively severe outbreak was found in Norfolk county. The severe winters, however, appear to be holding this pest in check at the present time. Scouting carried on in 1929 resulted in one new infestation being found at Guelph, a second in Essex county and a third in Norfolk county.

The European Pine Shoot Moth.—Since the discovery of this pest in 1925, a campaign has been carried on to bring about its control and eradication, if possible. Infestations which occurred in small isolated districts from coast to coast have been kept under observation each year, and infested material destroyed. Satisfactory progress has been made towards eradication and in one or two sections where the outbreak has been exceptionally severe the degree of infestation has been materially reduced.

The Oriental Peach Moth.—This insect first found in the Niagara peninsula in 1925, has now spread over practically the entire peach growing sections of southwestern Ontario. Observations were carried on in co-operation with the Vineland entomological laboratory, to determine the increase or decrease in intensity of infestation in the various districts.

The Dutch Elm Disease.—As reported last year this serious disease of elms was discovered in Europe in 1919. The importation of elms into Canada from Europe has been prohibited since April, 1928. Elms imported in 1928, previous to the passing of the Regulation, have been held in quarantine and examined periodically. It is gratifying to report that no sign of the disease has been found. This work was carried on in co-operation with the Division of Botany.

The Satin Moth.—This European insect was discovered on the coastal section of British Columbia in 1920. It has since spread and is doing serious damage to poplars and willows. In 1928 a quarantine was placed on the infested areas prohibiting the movement of poplars and willows, to uninfested districts. During 1929 scouting was carried on to determine the spread and distribution of the pest. It was found as far east as North bend in the Fraser valley and Lillooet on the Pacific Great Eastern Railway. The most northern infestation on the mainland was found at Powell river, and on Vancouver island at Campbell river. Trains and boats were found to be a factor in distributing the insect.

The Lecanium Scale.—The lecanium scale, *Lecanium coryli*, another European insect was discovered in Vancouver, B.C., in 1910. It causes severe injury to several species of trees, but particularly to horse-chestnuts and maples. It can be controlled by oil sprays. Scouting carried on during 1929 shows it has spread throughout the greater Vancouver district.

During the year the Chief of the Division accepted an invitation to become a member of the Advisory Committee dealing with entomological exhibits for the Century of Progress Exposition to be held in Chicago in 1933.

A considerable number of papers were read and articles prepared for scientific journals, and lectures and talks before various institutions, at conventions, etc., were made by the officers of the Division during the period under report.

DIVISION OF SYSTEMATIC ENTOMOLOGY

The upkeep and maintenance of the Canadian National Collection of Insects is one of the main duties of the officers of this Division. Each year the necessity for maintaining this collection in a thoroughly up-to-date condition

becomes more apparent; field officers of the Branch require quick and accurate determinations of the numerous species in all orders of insects met with in their ecological and applied entomological studies; universities and other institutions, not only in Canada but also in the United States, are applying more and more frequently to us for help in the classification of various groups of insects contained in their collections; private individuals, interested in nature studies, are constantly sending in insect material for determination. Due to the fact that the policy of steadily building up the National Collection of Insects and of keeping it abreast of the times from a classificatory standpoint has been consistently carried out during the past ten years, such work as is above specified can now be handled, in most instances, very satisfactorily.

At the present time the National Collection is housed in thirty-eight steel cabinets each containing a unit of fifty specially constructed drawers which are thus rendered more or less pest-proof. The total number of drawers is, therefore, 1900, apportioned to the various orders as follows:—

	drawers
Hymenoptera (bees, wasps, ants, sawflies, ichneumon flies, etc.).....	225
Lepidoptera (butterflies and moths).....	700
Coleoptera (beetles).....	350
Diptera (crane-flies, mosquitoes, houseflies and all two-winged flies).....	275
Hemiptera (true bugs with sucking mouth-parts).....	100
Orthoptera (crickets, grasshoppers, etc.).....	50
Odonata (dragon and damsel flies).....	100
Ephemeroptera (may flies).....	50
Neuropteroid insects (stone flies, caddis flies, lace winged flies, etc.).....	50

Besides this there are two galvanized iron cabinets containing racks of material preserved in alcohol, ten cabinets of slide material of minute insects, insect-parts, etc., and several hundred cork-lined, tight-closing wooden boxes (so-called Schmitt boxes) with duplicates or unworked material.

As it now stands the National Collection of Insects is the most complete collection of Canadian insects in existence and ranks, in fact, as one of the leading collections of North American insects on the continent; in some groups, notably the may-flies, certain families of beetles, butterflies and moths, and aquatic bugs, to which special study has been given, the collections can not be surpassed anywhere.

Research work and taxonomic studies, based on the material in the National Collection, have been continued with marked success during the past year; not only has such work been carried on by divisional officers but considerable material has been loaned on request for study to taxonomists in various museums and institutions in the United States. As a result approximately one hundred species of insects new to science have been discovered amongst this material and described; the resulting type-series have been deposited in the National Collection, thus adding materially to its value. Furthermore, through exchange or co-operation with other institutions, another hundred types have been added during the year. At the present time there are over 3,100 species of North American insects represented by type material in the Canadian National Collection; such type material is of vast assistance in determination work and, where the type-series is an extended one, can be very profitably used as a basis for exchange with other museums.

One of the most profitable sources of material for the National Collection have been the Insect Faunal Surveys conducted by divisional officers in various sections of the Dominion during the past six or seven years; not only is interesting data concerning the distribution and habits of known Canadian insect-species accumulated, but many new records of insects heretofore unknown to our fauna are obtained. During the past year three such surveys have been undertaken as follows:—

(1) Along the north shore of the gulf of St. Lawrence from Trinity bay on the west to Bradore bay at the western entrance to the straits of Belle

Isle. The insect fauna of this rather desolate region has been very imperfectly known and has proved to be most interesting, forming a connecting link between the typical Arctic zone occurring on the coast of Labrador and the Canadian and Hudsonian zones of central Quebec. Many species, described half a century ago and since then practically unknown to science, were secured in numbers.

(2) In the Knowlton and Brome lake region of southern Quebec. This survey was a continuation of work done in 1927 and 1928 and was especially directed to securing a further knowledge of the aquatic forms of insect life; the diversified topographical conditions existing in this region made it most suitable for such studies and a large amount of material was secured which will form the basis for detailed investigations.

(3) In the southwest section of Alberta. This was also a continuation of work carried on in 1923 and 1928 and was under the supervision of the officer in charge of the Lethbridge field laboratory. Considerable work in the semi-arid regions along the international boundary was undertaken as well as in the vicinity of Medicine Hat, the main efforts being directed toward securing a knowledge of the aquatic insects inhabiting the streams of this region.

Through purchases from second-hand entomological book-dealers many valuable additions to the taxonomic section of the Branch library have been made.

DESTRUCTIVE INSECT AND PEST ACT ADVISORY BOARD

The Destructive Insect and Pest Act Advisory Board was constituted in 1922, for the purpose of recommending to the Minister such changes in the regulations under the Destructive Insect and Pest Act as may be deemed necessary. During the year several meetings were held by the board, to consider questions in connection with preventing the introduction into Canada or spreading therein of pests or diseases destructive to vegetation, and relative matters. The secretary of the board is empowered to issue permits for the importation of plants from all countries, details in connection therewith will be found under the report of the Division of Foreign Pests Suppression. The following regulations were approved by Order in Council:—

Regulation No. 1 (Foreign) 2nd Revision. P.C. 772, May 8, 1929.

Governing the admission of nursery stock into Canada.

This regulation was amended by making Ottawa a port of importation for all classes of nursery stock, previously only shipments for "scientific purposes" could enter through this port.

Regulation No. 2 (Domestic) 8th Revision. P.C. 772, May 8, 1929.

Restricting the movement of corn, etc. from the province of Quebec and certain sections of the province of Ontario.

This regulation was amended by including in the quarantined area the entire province of Quebec and certain sections of Ontario, on account of the spread of the European corn borer.

Regulation No. 4 (Foreign) 2nd Revision. P.C. 1146, July 2, 1929.

Restricting the importation of plants and plant products from Florida and the Hawaiian islands.

On account of the severe outbreak of the Mediterranean fruit fly in the state of Florida, this regulation was amended by requiring that all plants and plant products imported into Canada from that state shall be accompanied by a certificate of inspection.

Regulation No. 4 (Foreign) 3rd Revision. P.C. 368, February 17, 1930

Restricting the importation of plants from the Hawaiian islands.

In view of the stringent quarantines placed on the areas infested by the Mediterranean fruit fly, by both the United States and Florida Departments of Agriculture, the restrictions with regard to certification of plants etc. were removed. This regulation was further amended by permitting the importation of ginger root, and taro under certification from the Hawaiian islands.

Regulation No. 18 (Foreign). P.C. 368, February 17, 1930.

Prohibiting the importation of wheat from Australia and Asia.

This is a new regulation. On account of the disease known as flag smut, which is not known to occur in Canada, the importation of wheat, including straw, bran and chaff from Australia and Asia is prohibited, unless accompanied by a certificate to the effect that the material was harvested in a district free from this disease.

Regulation No. 1 (Domestic) 4th Revision. P.C. 368, February 17, 1930.

Restricting the movement of apple, pear, quince and European mountain ash stock, in the provinces of Nova Scotia, Prince Edward Island and New Brunswick.

This regulation was revised by placing under restriction only the host plants of the European apple sucker instead of all nursery stock. It was also amended to include additional territory found infested by the pest.

Regulation No. 2 (Domestic) 9th Revision, P.C. 368, February 17, 1930.

Restricting the movement of corn, etc., from the Maritime Provinces, Quebec and certain portions of Ontario.

This regulation was amended by placing a quarantine on the Maritime Provinces, the European corn borer having been found in Nova Scotia and New Brunswick.

General Regulations, Section V. P.C. 557, March 12, 1930.

This section of the General Regulations was amended to the effect that all seed potatoes offered for sale must be certified. Provision was also made to certify a small sized grade.

FRUIT INSECT INVESTIGATIONS

In Nova Scotia, Quebec, Ontario and British Columbia, progress was made during the year, in life-history and control studies of insects affecting fruit trees. Reference to the more important insects studied during 1929 will be found under the chapter on "Field Laboratories."

INSECTICIDE INVESTIGATIONS

During 1929, work was continued on the development of a combined insecticide and fungicide spray, for fruit trees, more effective and at the same time less harmful than the spray materials used at present. This project, undertaken co-operatively with the Division of Botany, has been under investigation for several years, and involves extensive field experiments and extensive laboratory work both biological and chemical. Work with the aluminium sulphate mixture was continued. This mixture is now in extensive practical use. Conclusions of former years were corroborated, the mixture found to be an effective one with decided points of superiority over previous standard materials, but possessing some undesirable features. Very extensive experiments were conducted with the iron sulphate mixtures covering a wide range of formulae. From these, together with the work of previous years, very promising formulae were found.

Certain of these mixtures were very effective as insecticides and fungicides and were much safer to fruit and foliage than other standard materials. These mixtures are being tentatively recommended for experimental trial by growers. The iron sulphate mixture will be very satisfactory, provided that its effectiveness is corroborated in the future, as it is superior to the aluminium mixture in that there is no poisonous gas developed, no tendency to corrode the spray valves, and apparently no delayed "yellow leaf" effect. Some investigational work was done with calcium monosulphide combined with several insecticides, as a result of which this material is regarded as decidedly promising.

Further work was done with oil sprays, with particular reference to the European red mite. Several proprietary miscible oils gave poorer results than lubricating oils. Using a modern spray outfit quite satisfactory results were obtained by pouring the lubricating oil into the Bordeaux mixture with no attempt to make an emulsion. One particular oil was of distinct success in this connection. This corroborates results of the previous year and this method is being recommended.

Extensive tests were made with dipyrityls as a substitute for nicotine. These involved numerous field tests on various insects and considerable work in the insectary. The dipyrityls, which were in the form of sulphate, were, however, not very successful. Certain sulphonated oils were used for the purpose of increasing the effectiveness of contact insecticides, but with only indifferent success. Much work was done with pyrethrum and pyrethrum extracts, also derris and derris extracts, and with many proprietary materials, which, particularly the former, may lead to economic developments later.

As in recent years, an officer of the Division of Chemistry has been stationed at the Annapolis Royal laboratory during the summer months to assist in co-operative work on which chemical investigations are particularly necessary.

PARASITE INVESTIGATIONS

During the year the parasite work was established in permanent quarters at Belleville, Ont., with a view to the more efficient development and expansion of this important phase of insect control.

The major project of the laboratory continues to be the European Corn Borer and from European material received through the United States Corn Borer laboratory at Arlington, Mass., augmented by parasites bred at our laboratory, the following parasites were liberated at points in Ontario and Quebec: *Microgaster tibialis*, 8,123 individuals; *Eulimneria crassifemur*, 893 individuals; *Exeristes roborator*, 29,440 individuals, and *Microbracon bervicornis*, 207,000 individuals. Two imported species, *Macrocentrus gifuensis* and *Microgaster tibialis* were recovered from overwintered corn stalks at Chatham, Ont., in numbers sufficient to indicate their successful establishment at that place.

The parasite work against Oriental peach moth was developed on a much larger scale than in 1928. Liberations of *Trichogramma minutum* were greatly increased, reaching a total of 719,600 individuals, and the results produced were very encouraging, giving a parasitism of over 70 per cent of the eggs of the moth obtained in one orchard at the peak of the third generation. The larval parasite, *Macrocentrus ancylovora*, which is so important as a control factor in New Jersey, was imported from that district and colonized at two points in the Niagara district. The successful establishment of this parasite is indicated by the recovery of several hundred specimens from larvae of the peach moth collected during the fall.

Forest insect control also received more attention, with special emphasis upon the control of the larch sawfly. Sixty individuals of the parasite *Mesoleius tenthredinis* were liberated at North Bay, Ont., and recoveries indicate the successful establishment of this parasite at St. Williams, Ont., and Point Platon,

P.Q., as a result of previous liberations. Through the courtesy of the United States Gipsy Moth Laboratory at Melrose Highlands, Mass., 635 individuals of *Compsilura concinnata* were liberated near Vancouver, B.C., to aid in controlling the satin moth, which is now a very serious pest. Through the offices of the Imperial Bureau of Entomology we were able to liberate 1,153 individuals of *Blastothrix sericea*, a parasite of the Lecanium scale, in North Vancouver, B.C. Recoveries of the pine shoot moth parasites, *Orgilus obscurator* and *Cremastus interruptor*, were made at Hamilton, Ont., indicating their successful establishment in the district.

Other parasite introductions included the earwig parasite, *Digonochaeta setipennis*, received from England, and 190 adults were liberated at New Westminster, B.C. The transfer of *Aphelinus mali* from Ontario to British Columbia was also accomplished to aid in the control of the woolly apple aphid. Five hundred and sixteen individuals of this parasite were liberated in the Okanagan valley, and specimens were later recovered working on aphids.

Experiments are being continued in connection with the technique of breeding, storing, colonization and biology of the various species of parasites. Methods of shipping live insects are being thoroughly investigated, and this past year several species were carried across the continent with very little mortality, which greatly enlarges our field of possibilities.

MOSQUITO INVESTIGATIONS

Investigations relating to mosquitoes and their control were continued during 1929, and yielded results of scientific and practical interest of value to the public. Much data were collected regarding the life-histories, biology and distribution of these noxious insects in Canada, and the relation of river floods, rainfall and temperature to their seasonal occurrence and abundance. The effects of the blood-sucking habits of mosquitoes on live stock were also studied. Under the advice and direction of our officers, various organizations were encouraged to combat these pests with zest and increasing public support, and during 1929, as a result of the success of the organizations already in existence, the number of localities engaged in such efforts showed a decided increase. To meet the growing demand for information regarding these insects it has been necessary to publish a revised edition of Entomological Branch Circular No. 62, entitled "Mosquito Control in Canada."

HOUSEHOLD AND STORED PRODUCT INSECTS

Observations on various species of this important group of insects have been continued to augment the information already made available to the public in Department of Agriculture Bulletin No. 112—new series, published in June, 1929, under the title "Household Insects and Their Control." This publication was prepared to meet an urgent and increasing public demand for information regarding the identity, habits and methods of control of the various insect and other animal pests, including rats and other rodents, that frequently cause considerable annoyance to the occupants of dwellings and damage to their property. This publication is extremely well illustrated and contains chapters on the control of insects and other pests by the use of insecticides, fumigants and temperature; on such insects as house flies, bed bugs and fleas; on clothes moths and carpet beetles that damage clothing and furniture; on species that infest foodstuffs such as cockroaches, meal moths, larder beetles, ants, etc.; on pests of house plants; and on insects that occur in fruits and vegetables for the table.

INSECT PEST SURVEY

With the co-operation of entomologists in all parts of Canada, the Insect Pest Survey continued to make satisfactory progress during 1929. The reports from collaborators of the survey, dealing with insect outbreaks and occurrence, distribution and destructiveness of various species, together with the large volume of data accumulated from entomological literature since the survey was inception in 1922, have resulted in the creation of a record of insect pests, of considerable value to the cause of applied entomology in the Dominion. In 1929, volume 7 of the *Insect Pest Review* was issued at monthly intervals, during the growing season, to entomologists throughout Canada. Co-operation with the United States Insect Pest Survey, at Washington, was continued by the periodic exchange of summaries of current entomological conditions in the respective countries.

EXHIBITIONS

This part of the work of the Entomological Branch was quite in keeping with the high standard of previous years and the preparation and presentation of the various exhibits were of an order which was very creditable. While no increase was made in the number of exhibitions over that of 1928, those arranged for presented departures in construction, etc., which were very creditable.

As on former occasions, large and important assemblages were made at the Canadian National Exhibition at Toronto, at the Central Canada Exhibition at Ottawa, and at the Royal Winter Fair at Toronto. Besides these, prominent displays were made at London, Ont., Sherbrooke, P.Q., Regina, Sask., and at Vancouver, B.C., as well as at a number of the smaller provincial fairs both in Eastern and Western Canada.

At these exhibitions many of the more important insects that infest the farm, garden, orchard and home were on display. In some instances a special feature was made of fruit insects, while in others it was insects that affect vegetables or live stock.

It is both gratifying and encouraging to record that the public at large continue to show a sincere appreciation for these displays, and their general interest and response have been quite marked; in fact, it may be stated that the number of inquiries this year received from farmers, fruit growers and others has been increased considerably over that of any previous year. This would seem to indicate that these exhibitions are not only of educational value, but of real and practical benefit.

At all these events an officer of the Branch was in constant attendance to answer questions, offer advice and lend any assistance that was possible.

INDIAN ORCHARD WORK

During 1929, as in previous years, the Dominion Entomologist has co-operated with the Department of Indian Affairs, by directing the work of the Supervisor of Indian Orchards in British Columbia. The officer in charge of the work reports that each year a greater number of Indians, especially those resident in the interior, are taking a greater interest in the cultivation of fruits, both large and small. The Department of Indian Affairs are providing fruit trees, in certain sections, and during 1930 it is planned to set out some new orchards. During 1929 visits were paid to the various reservations and instructions given regarding pruning, control of pests, etc. Where necessary, spray pumps have been provided.

ADVISORY BOARD ON WILD LIFE PROTECTION

The Dominion Entomologist, representing the Department of Agriculture, attended meetings of the board held during the year. At these meetings import-

ant matters associated with the conservation of wild life are considered. Other Departments represented at these meetings are Indian Affairs, Interior, Mines, Fisheries and Mounted Police.

ADVISORY BOARD UNDER THE AGRICULTURAL PESTS CONTROL ACT

As in other years, the Dominion Entomologist, who is a member of this board, has had conferences with the officer in charge of the administration of the regulations under the Act, particularly with regard to insecticides offered for sale.

INTER-DEPARTMENTAL COMMITTEE ON AIR OPERATIONS

The Entomological Branch co-operated with the Civil Government Air Operations of the Dominion Air Service in conducting two extensive experiments in forest dusting for the control of insect outbreaks. One of these was conducted on a spruce budworm outbreak at Westree, Ont., and the other on a hemlock looper outbreak at the mouth of the Manicouagan river on the north shore of the gulf of St. Lawrence. In both of these operations the Air Service provided a Ford trimotor plane equipped for dusting, with the personnel and all plane supplies; the Entomological Branch provided the entomological staff and directed the experiment. Excellent results were obtained.

NATIONAL MUSEUM OF CANADA

In 1929, under the direction of the Dominion Entomologist, who is Honorary Curator of Entomology, National Museum of Canada, an interesting exhibit was brought together and placed on display, showing the silk worm of commerce in its various stages, as well as the raw silk and samples of material in various stages of process. During the year, conferences were held with the director of the museum regarding the preparation of permanent displays of insects and their work and it is expected that further exhibition material will be available in 1930.

FIELD LABORATORIES

ANNAPOLIS ROYAL, N.S.

The staff of this laboratory has been, as usual, concerned particularly with investigations of insecticides, but a study of some of the more prominent pests of the province was continued.

Extensive studies were made of the bionomics of three insects of the leaf-roller type. These were *Pandemis limitata* Rob., *Recurvaria nanella* Hb., and *Amorbia humerosana* Clem. The "leaf-rollers" as a class cause important injury to fruit trees. Experiments relating to the control of the gray-banded leaf-roller, *Eulia mariana*, were conducted. Fair results were obtained with spray applications of either lead arsenate or nicotine sulphate to the under surface of the foliage, at the time of the hatching of the eggs.

Extensive experiments were conducted against the European red mite with a view to obtaining the best control methods applicable to the prevailing local conditions. Lubricating oil sprays of a certain type, combined with Bordeaux mixture, were found effective, applied at the delayed dormant period.

Studies were continued of ovicides against the apple sucker, *Psylla mali* Schmidb. Further investigations relating to new control measures for the apple maggot were undertaken.

Spray and dust calendars were prepared in co-operation with other services; assistance was given in a "spray service," numerous lectures were delivered and articles prepared, and a comprehensive and attractive exhibit was displayed at several of the more important local fairs.

FREDERICTON, N.B.

Studies of the biology of eastern bark-beetles was continued and nine species were investigated. Information has been obtained regarding their life histories and habits, and the effect on development of moisture and sun. This has given a new understanding of the potential destructiveness of the species and the effectiveness of control methods in the protection of coniferous forests. Experiments on the damage done to the trees by defoliating insects such as larch sawfly and spruce budworm have been continued. Surveys of forested areas showed that the larch sawfly had practically disappeared, but the European beech scale continued to spread. A new budworm in the East, *Peronea variana*, was found to have attacked some two hundred square miles of spruce and balsam in Cape Breton. A potential outbreak of a bark borer in hemlock was found in Nova Scotia. These two insects will be investigated in 1930.

The life-history, abundance, and injury of the following insects were studied: the bronze cutworm, the black cutworm, the potato stem-borer, the European corn borer and certain other cutworms. Control experiments were carried out on the carrot rust fly, the seedcorn maggot, the zebra caterpillar and the bronze cutworm; 177 plots were treated with good results.

The bronze cutworm infestation was less intense but of greater extent than in 1928. The life history is now known and some of the natural control factors have been studied. The black cutworm infested about 1,000 acres of potatoes in York county and the loss was estimated at 27 bushels per acre. Experiments on the control of the carrot rust fly showed clearly the importance of early treatment in the spring. The European corn borer was found to have been eradicated, by clean-up methods, from the farms on which it was found in 1928. It was discovered, however, on five other farms this year.

Radio papers, farm circulars, technical papers and press notices were prepared, public and classroom addresses were given and circulars and bulletins distributed.

HEMMINGFORD, P.Q.

The work of this laboratory has been concerned chiefly with insects affecting fruit, field crops and shade trees. The studies of the round-headed apple-tree borer have been almost completed and have been partly published in Circular No. 73, issued by the Branch. The bionomics of the carpenter worm in maple have been studied and its control with calcium cyanide-raw linseed oil mixture demonstrated. The control of the cherry case-bearer on apple, with sodium polysulphide dusts and sprays did not give satisfactory results. Considerable publicity was given regarding the control of the apple maggot and the round-headed apple-tree borer. This resulted in much good. In collaboration with the Provincial authorities a spray service was operated, which resulted in a vast improvement in the quality of the apple crop. The study of the biology and control of white grubs progressed favourably during the year. The data on the habits of white grubs and their parasites have been materially added to, both in the field and in the laboratory. White grubs were abundant and the farmers were informed through the press as to the control practices to adopt. Other insects receiving attention were the European corn-borer, the lesser peach-tree borer and the poplar borer. Experiments with apple orchard sprays were undertaken and valuable data obtained. Through publications, lectures, fair exhibits and correspondence, farmers and fruit-growers have been assisted in controlling insect pests.

OTTAWA, ONT.

The field staff employed at the Ottawa laboratory continued the studies of control of the onion maggot and the tarnished plant bug. An investigation for the control of the cyclamen mite upon strawberries with particular regard

to preventing the distribution of the insect in establishing new plantations was incepted. The home made oil-emulsion spray for the control of the onion maggot continues to prove effective in reducing losses from this pest. The relationship between type of soil and the degree of infestation by this insect has been clearly demonstrated, and the utilization of this fact will be made in further studies to reduce the cost of control. No control for the tarnished plant bug has yet been found; much progress, however, has been made in other respects of the study of this problem. Valuable information upon the life-history and the rate and manner of distribution of the cyclamen mite has been secured, with promising progress towards a practicable control. The officers continue to keep in closest touch with the local vegetable growers, participating in their organized activities and maintaining a seasonably timed insect pest control information service by circular letters to the growers.

The Merivale laboratory directed from Ottawa was maintained during the summer and autumn of 1929. Valuable data were obtained regarding the conditions which govern the abundance of certain insects, particularly the maple leaf cutter. Here and at Ottawa, too, further information of value was obtained on a number of shade tree insect pests.

VINELAND STATION, ONT.

The Oriental peach moth investigation was continued during 1929. Life-history studies similar to those of 1928 were carried on under insectary and orchard conditions. Special attention was given to the mortality and habits of newly hatched larvæ, seasonal variations in type of injury to peaches, temperature requirements for egg laying, etc. Extensive small scale control experiments were conducted with spray materials with the object of determining what immediate and "residual" effects they had in preventing oviposition and in destroying the eggs and newly hatched larvæ. Control experiments were also carried on in badly infested orchards, but it is to be regretted that none of this work produced a satisfactory remedy. There was an increase in the infestation of peach moth, and, particularly east of St. Catharines, the insect was responsible for serious losses.

An investigation on leaf-rollers attacking the apple was initiated in Norfolk county, Ont., and good progress was made. Biological and control studies on the grape berry moth were also commenced at the Vineland Station laboratory. A partial life-history was worked out and some observations were made on the ecology of the insect.

Orchard experiments with oil and other sprays were conducted and the investigation of pyrethrum culture was continued. A very considerable amount of time was devoted to extension work, such as addressing fruit growers meetings, answering inquiries, visiting orchardists with special problems, publishing articles and assisting the Niagara Spray Service in an advisory capacity.

As usual, observations were made on insects of the season. Generally speaking, 1929 was not characterized by the appearance in severe outbreak form of many fruit insects. The only two species which caused serious concern among the fruit growers, were the green apple aphid and the Oriental peach moth.

STRATHROY, ONT.

The study of the control of field crop cutworms in southwestern Ontario as they affect mixed farming, particularly on sandy land, have been continued and definite progress can be reported. The direct relation between certain crop and cutworm abundance has been shown, and the importance of certain weeds as food plants for known species of cutworm moths demonstrated, knowledge of both of which will be utilized in future control work. Armyworms and Hessian fly have been kept under close observation in anticipation of possible out-

breaks, in order that advance information may be given to the farmers in time to avert crop damage. The preparation of excellent natural and wax exhibition mounts of insects and their damage continues to be a distinctive activity of this laboratory. These form a most useful and attractive part of departmental educational exhibits at important agricultural exhibitions and fairs.

CHATHAM, ONT.

Investigations for the control of the European corn borer and the Mexican bean beetle were continued by the officers of this laboratory as their chief study. However, an increasing amount of attention was given to studies of control of general field crop and vegetable insects, particularly those of tobacco. The European corn borer studies have clearly indicated that certain farm practices are the most efficient for use on the ordinary farm with the normal farm tools. Studies were also made to determine the importance of climatic and other factors in the normal abundance of the insect as bearing upon the margin of safety allowed by the present control program and the possibility of serious increase of infestation in a favourable year. This involves studies of winter mortality throughout the infested area and the normal summer mortality in relation to the weather at the point of greatest danger in the corn area. Further studies showed that Ontario conditions continue to seem unfavourable to the development of an injurious infestation of the Mexican corn beetle.

TREESBANK, MAN.

Field crop insect studies of the eastern prairies are carried on from this laboratory. Situated as it is on the margin of the prairies and set in the poplar bluff area makes it a particularly interesting centre for general studies. Studies, for identification purposes, of Canadian grasshoppers in their immature stages were continued and sixty-four species have now been reared and are recognizable in any stage. These should be of the greatest value in the next grasshopper outbreak. Studies of insects infesting native legumes and cruciferae (mustard) have been continued. These were undertaken owing to the increase of mixed farming on the prairies, with a view to determining in advance the potential importance of these insects as pests of botanically related farm crops.

Careful studies for the control of bertha armyworm were carried on during the year from which a method of protecting sweet clover by cultural practice was suggested.

The general insect situation in the province was surveyed so that advance information of probable outbreaks could be distributed to the threatened areas. The laboratory continues to increase as a centre of public interest and source of information, 1,174 visitors were recorded upon the laboratory registration book during the year.

SASKATOON, SASK.

Field crop insect problems of the central prairie area are studied from the Saskatoon laboratory and as the chief insects under investigation extend into the neighbouring provinces to some extent, the results of the work are applicable to a wide area outside of the Saskatchewan borders. The control of prairie wireworms and a study of the relation between crop rotation and abundance of injurious insects was given greatest attention. A special survey with a view to the control of mosquitoes in the Prince Albert National Park was made at the request of the Parks Branch of the Department of the Interior. Cutworms in general, the red-backed cutworm and the pale western cutworm in particular, bertha armyworm, wheat stem sawfly and grasshoppers were kept under careful observation and general study in order to anticipate possible outbreaks and to distribute warnings and control recommendations to local government officers and farmers in anticipation of trouble.

The wireworm studies were carried on in co-operation with the Experimental Farms Branch and local farmers by whom field scale tests were made of our recommendations. Both the wireworm control and crop rotation studies have progressed excellently and though final conclusions are impossible by the nature of the problems at so early a date in their prosecution, many most valuable results were secured indicating the progress of the study and their great value ultimately.

The closest co-operation was enjoyed with the University of Saskatchewan and the local Department of Agriculture. The co-operation with the Statistics Branch of the latter department makes possible a joint annual survey of the losses due to the major insects for the year which has proven of the very greatest interest and value to both organizations.

INDIAN HEAD, SASK.

The officers of this laboratory have continued their investigations of the insect injuries to native woodlands and plantations in the prairie region. Thorough investigations of the major insect infestations are in progress, and experiments are being conducted for determining the most efficient methods of control of the injurious species as they occur. Nurseries and plantations were inspected and numerous inquiries concerning the control of shade tree insects were dealt with.

LETHBRIDGE, ALTA

The far western prairie field crop insect problems of both irrigated and dry farming are carried on from the Lethbridge laboratory. A general study for the identification of cutworms from eggs was continued and this shows promise of being extremely useful. The annual study in co-operation with the Experimental Farms System, at Manyberries, with regard to the effect of grazing rotations, on prairie range, on insect abundance, particularly with reference to grasshopper outbreaks, was also continued. As minor studies, the status of such important insects as the pale western cutworm, the army cutworm and grasshoppers, was kept under close observation in order to forecast outbreaks and to anticipate loss by timely advice.

Excellent progress was made of the wheat stem sawfly control work which was considerably extended during the year. The value of trap crops and their practicability in the protection of the general wheat crop was clearly demonstrated on a field scale, and the increase of the efficiency of the natural parasites by certain simple cultural practices indicates that this may be a factor in reducing losses from this insect.

A destructive outbreak of bertha armyworm occurred upon certain areas where irrigation is practised. The crop damage from this outbreak, however, was reduced to a minimum by control activities following prompt organization of the growers.

VERNON, B.C.

The fruit insect investigations conducted from this laboratory related, as in 1928, to the life-history and control of the woolly aphis. As the control of this pest was of major importance no detailed studies of other fruit pests were made, although preliminary work was started in connection with the life-history and control of the oyster-shell scale. A great deal of work was done in connection with the control of the woolly aphis in relation to its spread of perennial canker of apple trees. Experiments were undertaken with soil treatments, trunk banding, canker paints, and winter and summer spraying for the control of this insect. Many of these showed great promise and will be further tested out in 1930.

On the whole the fruit crops of the province were singularly free from insect injury in 1929.

Grasshoppers increased throughout the Nicola and Chilcotin districts and did considerable damage and root maggot and wireworm injury was severe throughout the province.

The potato beetle work in the Kootenays continued successfully under the direction of the Provincial Department of Agriculture, this laboratory co-operating by making a survey of the situation in late summer and advising the provincial department as to the same and the amounts of poisoned dust necessary to continue the work in 1930.

The Forest Insect laboratory at Vernon during 1929-30 carried out a series of investigations on forest insect outbreaks, certain important forest insect surveys and biological studies of important forest insects. The yellow pine area was still free from bark-beetle outbreaks, except on one small section where a small amount of control work will be required in 1930.

Investigations on the spruce budworm were carried out on Vancouver island and near Barkerville in the Caribou district.

An investigation of a hemlock looper outbreak was conducted at Wigwam Inn and near Vancouver. At Wigwam Inn an airplane dusting operation was conducted in co-operation with the Provincial Forest Service with complete success.

A general forest insect reconnaissance was made of Stanley park, the Vancouver watershed, and Howe sound. The black-headed tip moth and the hemlock looper are becoming abundant in that area.

The survey of the eastern Rockies was continued, this being the third year that this work has been conducted. No extensive epidemics of forest insects have been discovered thus far in that area. This survey will be continued during the summer of 1930 north of the Canadian National Railway and including the Jasper park region.

A hemlock looper outbreak in Stanley park was investigated and recommendations made for airplane dusting control in 1930.

At the request of the National Research Council an intensive study of reported damage by smelter fumes was made on the Columbia river, below Trail, and situated in the northern part of Stephens county, Washington state.

A series of biologic studies of forest insects of the coast region was carried out in our field station at Pender harbour.

A branch sub-laboratory in Vancouver is conducted in co-operation with the Forest Products Laboratory of the Dominion Department of the Interior. Various forest insect investigations in the coastal region are conducted from this laboratory.

Our officers made the usual inspections of reported infestations and recommended action where necessary.

Correspondence with timber owners and the general public with reference to forest insect injuries is constantly increasing.

KAMLOOPS, B.C.

During 1929 very satisfactory progress can be reported on all projects and investigations undertaken. In connection with one or our two major projects—a study of the tick population of British Columbia, with especial reference to disease transmission by *Dermacentor venustus*—much information was obtained, both as to the rodent hosts of ticks, the ticks themselves and cases of tick paralysis in man and sheep.

Valuable data were secured in our other major project—investigations with a view to eliminating the warble fly pest from the main dairy districts of the province. The losses occasioned by warble flies were investigated, both in the

Lower Fraser valley and interior points, and statistics were compiled dealing with these. Some 520 animals were critically examined. In the former district 56 per cent were infested in February and in the latter 71 per cent in March. The total loss in the province through warble fly damage was calculated to be in excess of one quarter of a million dollars annually. An extensive survey was conducted early in 1930, with the co-operation of the leading dairymen in the province to ascertain the earliest appearance of grubs in different districts, since this point is of vital importance in outlining control measures.

A serious and rather unusual outbreak of sheep wool maggots in flocks in the Dry Belt was investigated. In some cases owners of small bands of several hundred head lost as many as fifty lambs. Suitable measures of control were brought to the attention of flock owners through personal visits and press notices.

A survey was taken to ascertain the main poultry parasites occurring in the province and valuable data were accumulated as to these pests and the measures in use to combat them.

Studies of the black flies of British Columbia were continued and the information secured in 1928 was considerably augmented.

When time could be spared from other investigations, attention was given to mosquito surveys requested in connection with various control projects. Mosquito control work undertaken by the Kamloops city authorities was supervised and almost 100 per cent control was realized. Assistance was given to the Kelowna and other mosquito control leagues and about half a dozen surveys were conducted.

Exhibits illustrating the control of live stock insects were shown at the six most important exhibitions and fairs in the province and a considerable amount of lecturing and other extension work was undertaken.

AGASSIZ, B.C.

Two control campaigns against the European earwig were planned and supervised in 1929, one in Vancouver and one in Ioco. In New Westminster a further study was made of certain phases of the bionomics of this insect. Much valuable data was collected bearing on more efficient control measures.

Efforts towards the natural control of this insect and of the Lecanium scale were continued by the liberation of parasitic flies received from the Belleville laboratory.

Experiments with copper sulphate dust to control slugs were made, and promising results obtained from the small number of tests possible.

The collection of data regarding the wheat midge was commenced this season with a view of determining the correct data for sowing to avoid this pest. These data are being correlated with phenological phenomena to avoid seasonal variations.

An extensive survey to determine the present area of infestation of the European satin moth was directed from this laboratory in 1929. The two scouts employed in this work located a considerable extension of the known area of infestation. The natural control of this insect was also commenced this year by the establishment of a colony of parasitic flies in the Lower Fraser valley. These flies were sent from the Belleville laboratory.

Mosquito control work was supervised again at Harrison Hot Springs, with excellent results. Observations on injury to nursery stock by the tarnished plant bug were made at Sumas, B.C., and preliminary observations and experiments in control of the raspberry *Byturus*, first reported as a pest of loganberries in 1928, were conducted at Sardis, B.C.

The Parks Board of Vancouver were advised and assisted with control work against the Lecanium scale and other insect pests on the park and boulevard trees in that city.

VICTORIA, B.C.

The investigation on the cherry fruit worm was practically completed this season and a satisfactory method of control discovered. A light petroleum oil emulsion combined with nicotine sulphate was found to give very satisfactory control, the infestation on sprayed trees being 2.36 per cent as compared to 19 per cent on the checks. Points in the life-history not covered by last year's investigations were cleared up this season.

A study of the holly leaf miner, which seriously disfigures holly trees and injures foliage intended for export, was commenced this season and satisfactory progress made in the study. A method of control by dusting with lime-nicotine dust was found to destroy practically 100 per cent of the adult flies, and further investigations along this line will be made during the coming season.

The control of earwigs in the city of Victoria and neighbouring municipalities was supervised by our officers. The original infestations have been kept well within bounds by the poisoning operations carried on from year to year, and while fresh infestations continue to be reported, these are occasioned by the accidental introduction of earwigs from outside points.

The new raisin-shorts bait for strawberry root weevil which was devised at this laboratory has proved a complete success and is well reported on by growers in this district and in Washington state.

A method for control of flea beetles which infest cruciferous crops was discovered this season and may be used as an alternative to the nicotine dust method previously advocated. This is by means of a light petroleum emulsion spray combined with nicotine sulphate. This insecticide gave good control and further trials are to be made during the coming season.

The exhibits of the Entomological Branch at the fall fairs at Vancouver and Victoria attracted considerable attention and interest. The officers at this laboratory continue to co-operate closely with the provincial Department of Agriculture.

PUBLICATIONS

The following publications were issued by the Entomological Branch during the fiscal year ended March 31, 1930:—

Circulars

- 44. "The Rose Chafer"—by W. A. Ross and J. A. Hall. (Revised edition.)
- 62. "Mosquito Control in Canada"—by Eric Hearle and C. R. Twinn. (Revised edition.)
- 73. "The Round-headed Apple-tree Borer and its Control"—by C. E. Petch.

Pamphlets

- 50. "The Satin Moth in British Columbia"—by R. Glendenning. (Revised edition.)
- 71. "The Pale Western Cutworm"—by H. L. Seamans. (Reprinted.)

Bulletin

- 112. "Household Insects and Their Control"—by Arthur Gibson and C. R. Twinn.

In addition to the above, officers of the Entomological Branch have contributed important papers to technical journals as well as to agricultural, horticultural, and other publications.

THE FRUIT BRANCH

The commercial apple crop for 1929 is estimated at 3,939,915 barrels. As compared with 3,235,970 barrels in 1928 or 124 per cent of the five-year average.

COMMERCIAL PRODUCTION OF APPLES BY PROVINCES

—	Nova Scotia	New Brunswick	Quebec	Ontario	British Columbia	Canada
	Barrels	Barrels	Barrels	Barrels	Barrels	Barrels
1925.....	956,060	40,000	70,900	950,140	932,673	2,949,767

POTATO PRODUCTION

The total potato production for Canada in 1929, amounted to 39,930,000 cwt., as compared with 50,195,000 cwt. in 1928

The following shows the acreage and yield by provinces for 1929:—

—	Area	Total yield	Merchant- able yield
	acres	cwt.	cwt.
Prince Edward Island.....	42,500	3,820,000	3,209,000
Nova Scotia.....	30,783	2,872,000	2,441,000
New Brunswick.....	45,215	4,646,000	4,042,000
Quebec.....	162,411	15,429,000	12,497,000
Ontario.....	148,435	8,484,000	7,042,000
Manitoba.....	30,436	1,161,000	1,033,000
Saskatchewan.....	41,637	1,149,000	919,000
Alberta.....	27,822	1,022,000	858,000

Canada.....	543,727	39,930,000	33,186,000

ONION PRODUCTION

The total onion production for Canada last year amounted to 29,530 tons as compared with 23,273 tons in 1928.

The following table shows the acreage, yield per acre, and total yield by provinces for 1929:—

	Area	Yield per acre	Total yield
	acres	tons	tons
Quebec.....	495	5.0	2,475
Ontario.....	1,383	10.53	14,565
British Columbia.....	1,393	8.96	12,490
Canada.....	3,271	9.03	29,530

INSPECTION OF FRUITS AND VEGETABLES

The work of the Fruit Branch in connection with the administration of the Fruit Act and Root Vegetables Act has shown considerable expansion over previous years. A new feature has been the administration of the Potato Export Regulations included in the Root Vegetables Act revised 1929, and this work has entailed a considerable increase in the inspection staff in the provinces of New Brunswick and Prince Edward Island to which the export regulations applied. The inspection of fruit and vegetable packages has been an important duty and factories or plants manufacturing containers have been systematically examined.

Inspections under the Fruit Export Regulations show an increase of 10 per cent over last year, but the requested inspection service shows a reduction of approximately 5 per cent, caused by the transfer of a large number of inspections of potatoes under the Export Regulations to the Administrative Service. A great expansion in the inspection of fruits and vegetables generally has taken place and the total number of inspection certificates issued is approximately 26 per cent in excess of the previous year.

The following table shows the number and kind of inspections made, by provinces, during the fiscal year ending March 31, 1930:—

Province	Grading and marking regulations	Fruit export regulations	Potato export regulations	Standard package regulations	Requested inspection service	Total inspections
British Columbia.....	6,354	1,285		47	6,236	13,922
Prairie Provinces.....	904				394	1,298
Western Ontario.....	5,495	317		92	2,812	8,716
Eastern Ontario and Quebec	2,333	423		52	1,450	4,258
Nova Scotia.....	3,141			655	1,032	4,828
New Brunswick.....	269	4	7,080	12	13	7,378
Prince Edward Island.....	5		5,398			5,403
Total.....	18,501	2,029	12,478	858	11,937	45,803

The total number of inspections made during the year under review as compared with the two previous years is shown in the following table:—

Inspection	1927-28	1928-29	1929-30
Administration.....	19,140	23,570	33,866
Requested Inspection Service.....	12,603	12,546	11,937
Total.....	31,643	36,116	45,803

THE FRUIT ACT

The following table shows the number of packages of various kinds of fruits inspected during the year ending March 31, 1930. The number of packages examined shows an increase of 28 per cent over the previous year:—

Product		Number of packages in lot	Number of packages inspected	Bulk
Apples.....	barrels	661,034	72,379	
Apples.....	boxes	2,781,113	159,156

Mixed fruit and vegetables.....	packages	2,834,218	188,331	
Frozen raspberries.....	barrels	491	53	
Total.....		7,852,169	576,164	194

The number of violations reported under the Fruit Act and the number of convictions as compared with 1928-29 are as follows:—

Year	Number of violations	Number of convictions	
		Domestic fruit	Imported fruit
1928-29.....	1,527	43	8
1929-30.....	1,355	21	1

FRUIT EXPORT REGULATIONS

Under these regulations all apples, pears and plums intended for export, except to the United States, are required to be inspected before shipment and a certificate issued stating the grade and condition of the product. As in previous years these regulations did not apply to fruit exported from Nova Scotia.

At the commencement of the season a reduction in the inspection fee from \$5 to \$3 per carload was made and this reduction accounts for a loss in revenue of 18.5 per cent, while the number of inspections increased 10 per cent as compared with last year.

The following table shows the number of export certificates and release permits issued, and the revenue collected, by provinces, for the year under review:—

Province	Export certificates	Release permits	Revenue
			\$
British Columbia.....	1,285	60	3,807 50
Western Ontario.....	317	293	1,329 80
Eastern Ontario and Quebec.....	423	5	1,670 00
New Brunswick.....	4		10 60
Total.....	2,029	358	6,817 90

The total number of certificates and permits issued and revenue received as compared with the two previous years are as follows:—

Year	Export certificates	Release permits	Revenue
			\$
1927-28.....	1,510	689	6,890 40
1928-29.....	1,827	106	8,393 45
1929-30.....	2,029	358	6,817 90

STANDARD PACKAGE REGULATIONS

Under these regulations factories and plants manufacturing barrels, boxes, baskets, crates, berry boxes and other fruit and vegetable containers were systematically inspected and the following table shows the number of inspections made as compared with the two previous seasons:—

	1927-28	1928-29	1929-30
Inspections.....	943	1,109	858

ROOT VEGETABLES ACT

Considerable expansion has taken place in the inspection of vegetables. At the request of the potato industry in New Brunswick and Prince Edward Island regulations concerning compulsory inspection of all carlots and cargoes of potatoes exported from these provinces were included in the Root Vegetables Act amended 1929. The amended Act also included grades for table turnips and celery and these products were inspected for administrative purposes. During the season a demand arose for the inspection of table turnips at shipping point and a great many cars, mostly intended for export, were shipped under Government inspection. There was also a marked improvement in the quality of table stock potatoes from certain areas in Quebec and Ontario.

The following table shows the number of packages of various vegetables inspected during the year ending March 31, 1930, which is an increase of 66 per cent over the previous year:—

Product	Number of packages in lot	Number of packages inspected	Bulk
Potatoes..... bags	4,313,937	278,380
Potatoes..... 15 lb. bags	298,750	12,589
Potatoes..... barrels	153,534	21,944
Potatoes..... bulk	4,095
Sweet potatoes..... hampers	569	80
Sweet potatoes..... barrels	926	67
Onions in bags.....	436,533	23,503
Onions in crates.....	16,803	2,352
Miscellaneous vegetables.....	1,425	1,425
Total.....	5,222,377	340,340	4,095

The number of violations reported under this Act and the number of convictions during the year, as compared with the previous year, are as follows:—

Year	Number of violations	Convictions
1928-29.....	429	7
1929-30.....	531	7

POTATO EXPORT REGULATIONS

These regulations were put into effect at the beginning of the 1929 shipping season and applied only to the provinces of New Brunswick and Prince Edward Island. In accordance therewith all carloads and cargoes of potatoes originating in these provinces and intended for shipment to points outside the respective provinces were inspected prior to shipment and certificates issued stating the grade and condition. In instances where it was found impracticable to inspect a shipment destined to a domestic market it was permitted to move under release permit, but arrangements were made to inspect the shipment at destination. For this service a fee of \$3 per carload was levied and the number of inspection certificates and release permits issued and revenue collected were as follows:—

Province	Inspection certificates	Release permits	Revenue
			\$
New Brunswick.....	7,080	16	22,180 00
Prince Edward Island.....	5,398	8	16,194 00
Total.....	12,478	24	38,374 00

REQUESTED INSPECTION SERVICE

This service has maintained its important position in the fruit and vegetable industry and may be now considered a permanent factor, but while the use of this service is optional on the part of the industry, it has evolved, as in Prince Edward Island and New Brunswick, into a compulsory service for potatoes and turnips by regulation, on request of growers and shippers, while in British Columbia a voluntary request for the inspection of all carloads of fruits and vegetables originating in the province was received prior to the commencement of the shipping season. In Nova Scotia, Quebec, and Ontario, marketing fruits and vegetables under a certificate of quality is also increasing. This service has also been extensively used with respect to imported products and a very wide range in commodities have been inspected on request.

With respect to the inspection fee, any district or province requesting the inspection at shipping point of 90 per cent or more of its entire carlot movement was granted a reduction from \$5 to \$3 per carload.

Where the request for inspection covered the entire carlot movement, provision was made to permit cars found impracticable to inspect, to move under release permit in order not to interfere with the normal movement to market.

The total number of certificates and permits issued and the revenue collected under this service, by provinces, during the year ending March 31, 1930, are as follows:—

Inspection District	Inspection certificates	Release permits	Revenue
			\$
British Columbia.....	6,236	29	18,861 17
Prairie Provinces.....	394		1,686 00
Western Ontario.....	2,812		9,719 00
Eastern Ontario and Quebec.....	1,450		6,674 00
Nova Scotia.....	1,032		2,552 50
New Brunswick.....	13		65 00
Prince Edward Island.....			
Total.....	11,937	29	39,557 67

The following table shows the number of requested inspection certificates issued by provinces as compared with the two previous years:—

Inspection District	1927-28	1928-29	1929-30
British Columbia.....	4,475	1,835	6,236
Prairie Provinces.....	614	412	394

Eastern Ontario and Quebec.....	706	839	1,450
New Brunswick.....	3,086	4,407	13*
Prince Edward Island.....	2,568	3,019	*
Nova Scotia.....	152	453	1,032
Total.....	12,603	12,546	11,937

* See Potato Export Regulations.

In the administration of the Fruit Act and Root Vegetables Act, inspections made under the fruit and potato export regulations are revenue bearing. Revenue also is obtained from inspections under the requested inspection service, a service purely optional on the part of the industry. Total revenue received during the year as compared with previous years is as follows:—

REVENUE BEARING INSPECTIONS

Year	Requested inspections	Fruit export regulations	Potato export regulations	Total inspections	Total revenue
					\$
1924-25.....	2,839			2,839	14,190 00
1925-26.....	4,060			4,060	19,819 50
1926-27.....	9,044			9,044	43,471 00

1928-29.....	12,546	1,933		14,479	65,852 95
1929-30.....	11,937	2,029	12,478	26,444	86,242 07

ONION STORAGE WAREHOUSE

The demonstration frost-proof storage warehouse provided by the Department and operated by this Branch, at Leamington, Ont., during the seasons of 1926-27, 1927-28 and 1928-29, proved of so great value in facilitating the proper marketing of the onion crop of that district, that the co-operative organization undertook to operate the warehouse under lease during the season of 1929-30, and it was again patronized to full capacity.

The use of this warehouse has enabled the growers, through the co-operative organization, to develop a more orderly marketing condition. The onions are placed in crates and go into storage in October, the period of distribution being from February to May, with a minimum of shrinkage.

NOTES

In accordance with recommendations made by the industry, changes were made in the Fruit Act as follows:—

P.C. 731 of May 1, 1929, authorized the use of a registered number to indicate the importer under the Imported Fruit Regulations.

P.C. 771 of May 8, 1929, provided slight changes in the dimensions of the tomato lug and six-basket crate, and standardized the two-quart basket, a three-basket container and the twenty-quart field or orchard basket.

P.C. 1158 of July 2, 1929, provided some changes in regard to tomato grades and ungraded fruit in baskets.

A. Fulton, B.S.A., Chief of the Markets Extension Division, resigned during the summer to accept a position as Commercial Representative for the Ontario Fruit Growers' Association in Great Britain. This position was filled by the promotion of Mr. W. B. Gornall, formerly employed as Assistant to the Fruit Commissioner.

There has been an increasing demand by the growers and distributors for standards of quality for various kinds of fruit and vegetables. Educational work along this line was undertaken by issuing branch recommended grades for strawberries and apricots, also for cabbage and cauliflower. This has proven very successful and will undoubtedly result in a consumer demand which will eventually require established grades by legislation.

Educational work in respect to blueberry marketing was continued in the province of Quebec; also in the marketing of long-haul shipments of green peas under refrigeration, in which there has been a marked growth of interest.

Officers of the Branch attended and addressed various provincial and local fruit and vegetable growers' meetings, and in several instances acted as judges at fairs and exhibitions.

MARKETS DIVISION

The final estimates for the 1929 Canadian fruit crop indicate a shipping point value of \$19,767,935, and compares very favourably with the final estimate for 1928, \$19,824,333, a reduction of \$56,398, or less than half of one per cent. Nova Scotia and Quebec experienced about the largest apple crops on record, Ontario and New Brunswick had the largest yields in years, while the British Columbia apple crop showed a decrease of 24 per cent from the yield of the year previous. While boxed apples brought good returns, Eastern Canada, shipping largely in barrels, suffered greatly through world conditions. The crop in England was double that of the year previous, while Continental European producing sections had yields much larger than normal, which resulted in a very draggy European market throughout the season with low price levels prevailing. The condition of the European markets had a corresponding effect on our domestic markets. The quality of the apple crop was not of the best, with the result that growers and shippers experienced a bad year. As an example, Nova Scotia had the heaviest commercial crop in recent years, 1,737,846 barrels, and received the lowest average shipping point returns on record. Pears, peaches, strawberries, raspberries, and other berries were produced in greater abundance than in 1928, while plums and prunes, apricots, cherries, and grapes returned lighter yields. Cherries and grapes obtained approximately the same average returns as the year before, while all other tender fruits sold at slightly higher levels.

The following table is a final estimate of production and shipping point value of fruits in 1929, as compared with 1928:—

	Year	Total quantity	Average price	Total value
		brl.	\$	\$
Apples.....	1928	3,235,970	3.49	11,297,867
	1929	3,939,915	2.70	10,637,770
Pears.....	1928	255,430	1.85	473,246
	1929	348,688	1.88	654,501
Plums and prunes.....	1928	480,010	1.28	615,890
	1929	285,460	2.05	584,261
Peaches.....	1928	605,770	1.98	1,200,345
	1929	672,541	2.51	1,684,746
Apricots.....	1928	36,210	2.48	89,800
	1929	33,341	3.47	115,693
Cherries.....	1928	271,250	3.08	836,137
	1929	253,799	3.38	856,912
Strawberries.....	1928	11,364,740	0.13	1,426,990
	1929	14,415,344	0.12	1,796,528
Raspberries.....	1928	4,306,860	0.17	728,641
	1929	5,021,424	0.18	886,620
Other berries.....	1928	3,324,340	0.12	390,617
	1929	4,603,703	0.12	533,864
Grapes.....	1928	69,120,000	0.04	2,764,800
	1929	50,426,000	0.04	2,017,040
Total value.....	1928			19,824,333
	1929			19,767,935

VEGETABLES

The potato crop returned a yield considerably under that of the year previous, the final estimate being 39,930,000 cwt. as compared with 50,195,000 cwt. in 1928. All provinces, with the exception of Quebec, reported a much lower yield. This condition was most noticeable in the Prairie Provinces where, as a result of extremely dry weather conditions, the crop was under 50 per cent that of 1928. The Quebec yield was 18 per cent in excess of that of 1928, and comprised 38.6 per cent of the total Canadian crop. The following table indicates the 1929 acreage and production for Canada, and by provinces, as compared with 1928:—

	Year	Acreage	Production
			cwt.
Canada.....	1928	599,063	50,195,000
	1929	543,727	39,930,000
Prince Edward Island.....	1928	51,890	5,708,000
	1929	42,500	3,820,000
Nova Scotia.....	1928	30,685	3,280,000
	1929	30,783	2,872,000
New Brunswick.....	1928	52,239	6,776,000
	1929	45,215	4,646,000
Quebec.....	1928	164,000	13,071,000
	1929	162,411	15,429,000
Ontario.....	1928	181,241	11,875,000
	1929	148,435	8,484,000
Manitoba.....	1928	31,054	2,585,000
	1929	30,436	1,161,000
Saskatchewan.....	1928	42,800	3,052,000
	1929	41,637	1,149,000
Alberta.....	1928	28,366	2,220,000
	1929	27,822	1,022,000
British Columbia.....	1928	16,788	1,628,000
	1929	14,488	1,347,000

Marketing conditions were quite favourable, particularly as the season advanced, quotations being very much higher than the year before. Maritime growers received for Canada No. 1 grade, delivered at warehouse or siding, \$1.75 to \$3 per barrel of 165 pounds, mostly \$2.25 to \$2.50. During the past season cars rolled from the Maritimes and Quebec in comparatively large numbers to the Prairies and a few cars were shipped as far as the Pacific coast. Exports to the United States were comparatively heavy during the winter and spring months.

Onion production amounted to 29,530 tons as compared with 23,273 tons in 1928, an increase of 26.9 per cent. Resulting from plentiful supplies, onion prices throughout the season were poor to fair.

EXPORTS

Apple exports show a large increase during the 1929-30 shipping season as compared with the 1928-29 season; 1,727,089 barrels were exported during the season just over, while 1,021,490 barrels were exported the year before. This is an increase of 69 per cent. The following table shows the apple exports by provinces for the last two seasons:—

Province	1928-29	1929-30	Per cent
	barrels	barrels	
Nova Scotia.....	680,840	1,396,251	205
Ontario.....	42,200	103,379	245
	boxes	boxes	
British Columbia.....	895,350	682,378	76
Total in barrels.....	1,021,490	1,727,089	169

It will be observed from the above table that Nova Scotia exports increased 205 per cent and Ontario 245 per cent, while British Columbia showed a decrease of 24 per cent. While exports showed a very large increase over the year before, returns were very disappointing. English and European crops were much heavier than in 1928, which lessened the demand for apples from this continent. The Nova Scotia crop was exceptionally large but of indifferent quality, and some English markets, notably Cardiff, were constantly flooded with exports from the Annapolis Valley.

EXTENSION OF FOREIGN MARKETS

CERTIFIED SEED POTATOES

In co-operation with the Botany Division and Trade Commissioners of the Department of Trade and Commerce, considerable work was done with a view to establishing Canadian certified seed potatoes on foreign markets. Several small shipments were made between September and December, which were assembled in Montreal and Saint John, N.B., and which consisted of Green Mountain, Irish Cobbler, Spaulding Rose, Bliss Triumph, Dooley, Early Rose and Burbank varieties. Efforts were made to include in these shipments, seed from the various provinces producing certified stock, but it is felt that in the event of good results obtaining from these shipments, that it will be necessary to confine further developments to those provinces which are best able to care for this market. In addition to the above, a shipment of Burbanks was made direct from British Columbia. Unfortunately, direct shipment from the West coast takes forty to 45 days, and it would appear to be doubtful if any substantial business could be built up with British Columbia, although the Burbank is seemingly most suited to the demands of the Argentine trade. Efforts are presently being made to introduce Canadian certified seed potatoes into other South American countries, and to the East Indies.

APPLES

A small test shipment of apples, comprising four boxes each of Newtown, Winesap, Jonathan, and Grimes Golden, financed by the Fruit Branch was sent to Shanghai, China, in co-operation with the Trade Commissioner at that place, to find out how Canadian apples would be received on that market. Co-operating with enterprising shippers, barrelled apple shipments to the Argentine, and boxed apple shipments to the Netherland East Indies were made.

APPLE SLACKS

Experimental Shipments of Nova Scotia Barrelled Apples

Early in 1928 three experimental consignments of Nova Scotia Stark apples were shipped to Liverpool by the Fruit Branch, with the object of comparing four methods of packing barrels for long distance delivery with the least possible loss from slackness. It was felt, however, that a more satisfactory comparison might be obtained by employing certain varieties which appeared from an analysis to be particularly susceptible to slackness. Accordingly a scheme for a second experiment was drawn up, and, in co-operation with the National Research Council and the province of Nova Scotia, a further series of shipments was made in the autumn of 1928, with Gravenstein, Golden Russet and Blenheim Orange—150 barrels in each shipment of each variety, varying the method of packing, and shipping at the same time as controls 50 barrels of each variety packed under regular packing house methods.

In the fall of 1929 further investigations were carried out on certain factors which appeared to have a bearing on the condition of pack at destination. The experiment was limited to Gravenstein, Golden Russet and Blenheim Orange—60 barrels for each variety and sub-divided into six lots of ten barrels each, under different methods of packing and at different periods of shipping for each variety, the first shipment of Gravensteins leaving Halifax for Liverpool on September 17.

Arrangements were made to have all the experimental barrels carefully inspected before shipment, and again on arrival in England.

Information was compiled on the loss and weight of different varieties from packing until arrival in England, namely, the percentages of slacks found, the percentages of slacks in regular shipments from the various packing houses, the satisfaction given by the different makes of barrels, and other information likely to be of use in solving this problem.

MARKET NEWS

The Markets Extension Division during the fiscal year ended March 31, 1930, disseminated crop and market information of interest to growers and dealers through the medium of crop reports and market bulletins. The crop reports dealt with estimated production and condition of leading commercial fruits and vegetables and were issued monthly, June to October inclusive, with a special potato crop review issued in January. In the spring of 1929 it was decided to revise the form of the market bulletin. The bulletin as published did not allow a ready comparison between commodities on the various markets and it was felt that if the report was by commodities showing price range on the principal markets it would be of more value to the industry, and to that end the Canadian Fruit and Vegetable Market Bulletin was devised and published, the first issue being distributed on Friday, August 9. From the favourable comments that have been received from all sections of the country it is evident that the change in form of this publication has met with the approval of the entire industry.

PUBLICITY

The Markets Extension Division has during the past years prepared information suitable for broadcasting, which reports have been broadcast over the Eastern Chain of the C.N. Radio Stations. Three broadcast speeches over the Fredericton, N.B., Station, were made under the direction of this Division. Late in the year in co-operation with the Publications Branch, arrangements were made whereby every Friday an article dealing with crops or markets is prepared and released through the Canadian press.

Exhibition work was carried on during the past year. Exhibits were placed at all the Class A Fairs in the Prairie Provinces, including Brandon, Calgary, Edmonton, Saskatoon and Regina; at the Canadian National Exhibition and Royal Winter Fair, Toronto, and at the Central Canada Exhibition, Ottawa. In view of the fact that the Fruit Branch has taken over the work of administering the Meat and Canned Foods Act as it applies to fruits and vegetables, the canning phase of the industry was emphasized in each of these exhibits. An exhibit was also placed at the Imperial Fruit Show at Birmingham, England, supervised by the Canadian Fruit Trade Commissioner in co-operation with the Empire Marketing Board. A display was staged of the principal varieties of apples from the main producing provinces. Apples were also purchased for free distribution to visitors at the show, the Empire Marketing Board providing an appropriation to meet the expenses incurred in this distribution.

The educational film "Growing and Marketing Canadian Apples" has been loaned to various fruit-growing and co-operative societies for showing at members' meetings.

The lecturer and demonstrator has attended various exhibitions and given demonstrations in canning, has lectured and demonstrated at women's meetings, and in short courses in home economics and has written three bulletins "Home Canning," "Commercially Canned Products," and "The Cooking of Vegetables." The Demonstrator's work during the year has emphasized the variety and quality of canned products, and has covered six provinces. A result of the work in this connection is that it has been shown that women desire and need authentic information regarding all phases of the use of fruits and vegetables in the home.

CANNING DIVISION

The inspectors of this Division visit, from time to time, the canning and jam factories and apple evaporators operating under permit from this Branch, also the wholesale warehouses and various customs points where import shipments of canned fruits and vegetables and their products are presented for entry into Canada.

In 1929 there were 414 plants operating under permit from this Branch whose products entered into interprovincial or export trade. Of these, 262 are canning factories, 71 are jam factories and 78 are apple evaporators or dehydrators.

The following shows the distribution of the plants for the year ending March 31, 1930, compared with those in operation during the year ending March 31, 1929:—

	1929-30	1928-29
Prince Edward Island.....	4	4
Nova Scotia.....	27	27
New Brunswick.....	10	11
Quebec.....	49	36
Ontario.....	271	249
Manitoba.....	7	7
Saskatchewan.....	1
Alberta.....	2	3
British Columbia.....	43	43
Total.....	414	380

The twelve canning inspectors, assisted by various Fruit Inspectors, made 3,300 visits to these plants during the year 1929.

Two thousand four hundred certificates were issued covering products from which 694 samples were taken, including shipments of the following:—

	cases
Tomatoes.....	477,000
Tomato products.....	477,842
Peas.....	22,100
Corn.....	11,410
Pears.....	64,700
Evaporated and dehydrated apples.....	40,830

During the past year over 2,000 samples of canned fruits and vegetables were inspected and graded by the inspectors at the various plants, and 3,000 samples were submitted to head office for check-grading.

Inspectors are located at the principal import points, such as Halifax, Saint John, Montreal, Toronto, Winnipeg, Regina, Saskatoon, Edmonton, Calgary, and Vancouver. Samples are taken from import shipments of canned and evaporated fruits and vegetables and, with the exception of those taken at Vancouver which numbered 1,181, are submitted to head office, and some 5,224 samples have been examined at Ottawa during the past year. A permanent Inspector is stationed in Vancouver for the purpose of grading samples from import shipments, as well as inspecting and grading samples of goods packed in British Columbia.

During the past fiscal year, 8,988 reports covering samples graded at Ottawa and at Vancouver were sent to the interested parties, this being an increase of 3,800 over the previous year. In addition, reports in letter form were forwarded on special lots; 385 samples of jams, jellies, glace cherries, catsup, etc., were submitted to the Dominion Chemist for analysis; 300 samples of tomato paste to the Pathologist for examination, and 325 samples of evaporated apples and waste were also submitted to the Chemist at Ottawa for moisture testing, and many others were tested in Nova Scotia and British Columbia.

When samples are found to be incorrectly labelled as to grade, steps are immediately taken whereby an Inspector places the entire lot under detention until such time as further samples are taken and graded. If the second samples are found similar to the first, then the packer or importer is required to relabel the goods to meet with the grade found.

Certain changes have been made in the regulations under the Meat and Canned Foods Act with respect to preserved fruits and vegetables and fruit and vegetable products as follows:—

Order in Council P.C. 852 of May 23, 1929. To facilitate the export movement of these products, the regulations were amended to permit of established brands in export markets receiving recognition so long as the Canadian products are purchased on a basis of quality.

Order in Council P.C. 920 of May 29, 1929. Defining standard containers for jams, jellies and marmalades and setting forth limit of time when such non-standard containers may be used.

Ministerial Order of March 17, 1930. Adding to present list of standard containers for canned fruits and vegetables which may be used without declaration of net weight and drained weight.

QUALITY STANDARDS FOR JAM, MARMALADE, JELLY AND PRESERVE

During the year standards of quality were set for jam, marmalade, jelly and preserve by Order in Council under the Food and Drugs Act, this regulation being administered by the Fruit Branch.

Under this legislation three standards of quality are established, a pure jam designated as such consisting of fruit and sugar only; for the second grade a named fruit with other fruit juice or pectin may be used; and for the third quality two or more fruits may be used and may or may not contain colour, preservative, glucose, corn syrup or other sweetening.

TRANSPORTATION DIVISION

The Transportation Division has had a very full year in its work relating to (a) traffic or costs of transportation and (b) facilities and practices for transportation of fresh fruits and vegetables. Principal among its traffic subjects were the following:—

The 1923 Express Rates Case, revived in the winter of 1928-29, was withdrawn definitely in January, 1930, leaving room for negotiations for local adjustments, of which a number are presently in hand.

Partial failure of the potato crop in the Prairie Provinces led to an application by potato shippers in the Maritime Provinces for freight rates sufficiently lower than the normal class basis in order that their potatoes could move into the Canadian Northwest in fair competition with potatoes from North Dakota and Minnesota, whose combined cost of freight and duty to Winnipeg, for instance, is 63 cents to 69 cents per 100 pounds. The high price ruling and expected for potatoes and the short crop in North Dakota and Minnesota disposed the railways to believe that Maritime potatoes needed no aid this season. Some reduction was granted after lengthy negotiations, but not enough to put maritime potatoes on a level footing with the imports which met considerable demand.

Assistance was given the provinces of British Columbia, Alberta, and Saskatchewan, on solicitation, in the preparation of a comparison of freight rates on fruit from British Columbia, in connection with their appeal for removal of the Mountain Differential.

Assistance was given the apple exporters of Nova Scotia in preparation of an application to the Board of Railway Commissioners for relief from the top wharfage charge assessed by the Halifax Harbour Commission on apples and potatoes for export through that port, it being held that this new cost, post-dating the Maritimes Freight Rates Act and reducing its benefit, should be recoverable by the Dominion Atlantic Railway under the Act instead of being assessed against the traffic. Recent favourable decision by the board will relieve the traffic of this charge for the future, and retroactive application will result in cash rebates and waiving of deferred collections totalling, it is estimated, over \$10,000 in the Annapolis valley.

Among questions of facilities and practices of the shippers and carriers, we are continuing our practical assistance in precooling-by-fanning methods for loaded cars. A marked advance was made at Haney, B.C., the past season, by reversing the direction of the fans, now pulling cold air off the ice and pouring it over the load. In the coming season an improved type of fan is to be tried out. Precooling apparatus purchased last season by shippers at Oliver, B.C., is being leased for practical demonstration at a point where volume of traffic and convenience in re-icing are more favourable than at Oliver. The car precooling principle is to be embodied in a carlot assembly plant to be constructed at Matsqui, B.C., south of the Fraser river, where an effort is being made to secure a refrigerator car body to be built into the plant and equipped with portable fans for precooling assembled and held-over lots of berries, with the same fans available for precooling straight carlots on track. The possibilities in carlot precooling instead of investment in expensive building and equipment for the purpose have attracted considerable attention in British Columbia.

During the past season the only temperature tests conducted in divided basket vs. brine tank refrigerator cars were with heated traffic. Unusual temperature and crop conditions gave few opportunities for tests with refrigerated fruits and vegetables, and the Canadian meat packers offered no opportunities for further tests with their traffic. The packers' objections to adoption of the divided basket bunker type of refrigerator car have eased off considerably, also the railways' orders for new equipment for 1930 delivery are for the basket type entirely, and it is intended that refrigerated and ventilated tests will be conducted during the 1930 movement.

From British Columbia we have a request to look into the benefits of controlled ventilation, i.e., ventilating with night air only vs. continuous ventilation, for those products which do not take kindly to refrigeration. We entirely agree with what is contended, that the insulated refrigerator car body could retain considerable of the night cooling effect, and that to close the ventilators against the sometimes excessive mid-day temperatures would prevent much of the over-maturity found in products moved under continuous or standard ventilation. Some shippers contend that they could more than double the sale of tomatoes in the Prairie Provinces if shipped better flavoured and coloured. The railways hold that the trainmen, through their organization, will resist any effort to have them made responsible for transit opening and closing of ventilators, and, of course, the practice would have little value if this were done at divisional points only. We propose, however, and will have co-operation of the railways, to look into the practical value of the practice, leaving operating difficulties for adjustment if or when the service proves worthy of negotiations or even of a special charge. Density of traffic justifying attendants, i.e., five or more cars per train, would solve the obstacle in question.

CANADIAN HORTICULTURAL COUNCIL

Many matters of interest to the fruit and vegetable industry have been given consideration by the Canadian Horticultural Council during the past year and full information with respect to its activities may be secured from its annual report. The Department continued to give this organization financial support to the extent of a grant of \$8,000 for the year 1929-30.

PUBLICATIONS BRANCH

The work of the Publications Branch during the fiscal year 1929-30 included the distribution of 4,442,918 bulletins, pamphlets, circulars, reports, press notices and special articles, involving the addressing of 3,282,850 envelopes from 107 mailing lists. This represents an increase of upwards of 15 per cent in the volume of work handled by the Branch as compared with the preceding fiscal year. Large as this distribution was it would have been much greater had it been possible more fully to acquaint farmers and others interested with the nature and extent of the published material available on request and without charge.

The ultimate value of the work done by the several branches of the Department of Agriculture throughout the Dominion depends directly upon the extent to which the results of research and experimentation are made available to those concerned in the agricultural industry, including not only farmers, dairy, live stock and poultrymen, but also the service organizations connecting the farm with the consumer, and the ultimate consumers of farm products.

It is as the connecting link between the Department and the public that the Publications Branch functions, and each year sees an increase in the practical range and extent of its operations.

The principal work of the Branch is the distribution of bulletins, pamphlets, circulars and reports containing information useful to those concerned with or engaged in the agricultural industry. This is supplemented and extended through a news and features service to the daily and weekly newspapers, the farm publications and other magazines in Canada.

At the present time 95 per cent of the distribution is made direct to individuals. The key to direct mailing of bulletins and other publications is Seasonable Hints, and of these 2,054,854 were sent out during the year under review. With each copy of "Hints" is included a reply-card carrying a list of some ten of the more recent publications. The return of these cards and special requests provided for the direct mailing of 767,317 publications during the year, as indicated below:—

PUBLICATIONS SENT OUT BY SPECIAL REQUEST

April, 1929.....	64,998
May, 1929.....	79,027
June, 1929.....	77,826
July, 1929.....	11,159
August, 1929.....	67,207
September, 1929.....	63,792
October, 1929.....	116,161
November, 1929.....	44,803
December, 1929.....	38,274
January, 1930.....	44,823
February, 1930.....	100,854
March, 1930.....	58,393
Total.....	767,317

DISTRIBUTION DIVISION

The work of the Distribution Division is summarized as follows:—

Item	1929-30	1928-29	Increase or Decrease
Seasonable Hints.....	2,054,854	1,360,143	694,711
Market Reports, etc.....	1,013,570	1,307,237	-293,667
Publications—New.....	604,132	889,097	-284,965
Publications—Old.....	688,814	211,240	477,574
Total.....	4,361,370	3,767,717	593,653
Press Items (256).....	70,010	42,470	27,540
Other Articles (193).....	6,978	4,392	2,586
Slip Lists.....			
Total.....	4,438,358	3,814,579	623,779

From this it will be seen that there was an increase of 15 per cent in total distribution, largely in connection with Seasonable Hints, Publications—old, and press items. Seasonable Hints now issues quarterly instead of three times a year, and the news service developed in the preceding year has been materially extended.

The decrease in market reports, etc., distribution comes through the withdrawal from circulation from June to October of the Seed, Feed and Fertilizer Market Report, accounting for a decrease of 130,000 copies, and the issuing of the Fruit and Vegetable Market Bulletin on a weekly instead of a twice-a-week basis, accounting for a further 80,000 copies. The increase in the slip-sheet item comes through the revision of mailing lists by the branches for whom they are maintained.

The "reply card" issued with Seasonable Hints and also included with each bulletin or pamphlet supplied on special request, continues to prove a useful medium in extending circulation, as is indicated by the following statement:—

PUBLICATIONS SENT ON REPLY CARDS

Reply Cards Received			Publications sent
Month	Year	Number	
April.....	1929	9,589	46,968
May.....	1929	2,137	23,644
June.....	1929	725	9,914
July.....	1929	10,048	24,907
August.....	1929	7,113	28,023
September.....	1929	2,773	5,721
October.....	1929	19,847	58,098
November.....	1929	12,137	36,412
December.....	1929	5,490	37,312
January.....	1930	12,129	28,205
February.....	1930	3,425	9,247
March.....	1930	12,528	31,000
Totals.....		98,031	339,451

An average of 3.4 publications are mailed for each reply card received.

PUBLICATIONS AVAILABLE

At the end of the fiscal year under review there were available for distribution in the Publications Branch 361 publications as listed below:—

Subject	Number available
<i>Reports—</i>	
Departmental.....	8
Dominion Experimental Farm.....	15
Branch Farms and Stations.....	25
<i>Bulletins, Pamphlets and Circulars—</i>	
Field Crops Division.....	55
Field Crops Reports.....	7
Livestock.....	50
Dairying.....	37
Orchard and Gardens.....	27
Insects and Plant Diseases.....	50
Poultry.....	27
Miscellaneous.....	44
Acts, Orders and Regulations.....	16
	361

Of these 361 publications available for distribution it is interesting to note that 138 were issued and distributed during the fiscal year 1929-30. Of a total of 1,115,842 copies received 604,132 were sent out.

MAILING LISTS DIVISION

In the Mailing Lists Division 107 separate mailing lists are maintained from which envelopes are addressed as required. The work of this Division is summarized as follows:—

MAILING LIST MAINTENANCE

	1929-30	1928-29	Increase or Decrease
Seasonable Hints.....	400,482	400,205	277
Address plates stamped.....	51,744	44,247	7,497
Addresses on special lists.....	3,466	3,462	4
Address lists.....	107	103	4
Special applications.....	45,996	54,201	-8,205
Addresses cancelled.....	35,315	20,459	14,856
Total address plates.....	477,580	473,582	3,998
Addresses changed.....	1,831	1,370	461

Constant revision is required to keep mailing lists up-to-date. One item alone is the revision of addresses occasioned by postal changes in new offices opened, offices closed, and old offices reopened—over 360 of these changes, an average of 30 per month, necessitated the revision of portions of all the lists during the year. New names are constantly being added, and of course much "dead wood" is constantly being weeded out. New names come from three principal sources—Dominion Experimental Farms and Stations, reply cards, the banks and similar large organizations dealing directly with farmers.

The work done by the Mailing Lists Division is summarized as follows:—

ENVELOPES ADDRESSED

For use in Mailing	1929-30	1928-29	Increase or Decrease
Bulletins and other printed matter.....	1,983,867	1,334,412	649,455
Market reports, etc.....	1,145,813	1,352,844	-207,031
Circulars, press items, etc.....	72,966	42,470	30,496
For other branch use.....	73,226	54,935	18,291
For Slip-List use.....	6,978	4,392	2,586
Totals.....	3,282,850	2,789,053	493,797

The increase in the distribution of Seasonable Hints and the decrease in the distribution of certain market reports noted in connection with the work of the Distribution Division, is also apparent in the number of envelopes addressed. The difference of 1,160,068 between the total items distributed and the total of envelopes addressed is interesting in that it shows rather conclusively the practical use to which envelopes are put.

In connection with the Mailing Lists Division it is interesting to note that there were 51,744 new address plates stamped in connection with 45,996 new applications and 37,146 address changes, an increase of 7,497 in the number of new plates made, and of 15,317 in the number of addresses changed, compared with the preceding fiscal year.

Mailing lists are maintained in this Division as follows:—

Branch	Number of lists	Number of address plates
Dairy and Cold Storage.....	4	10,131
Entomological.....	17	9,946
Experimental Farms.....	28	120,511
Library.....	3	3,744
Live Stock.....	17	20,481
Seed.....	15	14,340
Fruit.....	9	12,615
Publications.....	8	284,472
International Institute.....	4	284
World's Grain Exhibition and Conference.....	2	1,056
Totals.....	107	477,580

NEWS SERVICES

There has been a marked increase during the fiscal year 1929-30 in the volume and range of news material issued by the Publications Branch. A growing appreciation on the part of the press for the news value of service information is apparent and this important end of the work has been enlarged and completely reorganized to include the entire range of Canadian daily and weekly newspapers and farm publications. Material used by the Canadian press has increased in volume, and toward the close of the year this was extended to include a weekly summary of the live stock market reports.

A Clip-sheet service was inaugurated in March, with a distribution of 493 publications, including 100 daily newspapers, 35 farm publications, 323 self-print weekly newspapers printed in Toronto and Winnipeg respectively. The Clip-sheet service carries in the average of ten topical paragraphs relating to the work of the Department and farm interest, prepared in news style, embodying the departmental identification, and intended to develop and maintain interest in the Department and its work.

The Clip-sheet service is supplemented by a regular service of news material mailed direct to daily and weekly newspapers, and a special article service for farm publications and magazines.

NEW PUBLICATIONS

During the fiscal year the Publications Branch received 1,115,842 copies of new publications, of which 849,843 were printed in English and 265,999 were printed in French. Of these new publications 604,132 copies were distributed during the period, and of those distributed 469,380 were English and 134,752 were French. Complete detail with respect to the new publications received and their distribution is given in the following statement:—

AGRICULTURAL ECONOMICS BRANCH

Provision was made during 1929 for the establishment of a new Branch in the Department to deal with the subject of Agricultural Economics. For a number of years work in this field has been carried on by different branches. An instance of this is the assistance and encouragement given to co-operative marketing activities by certain branches, details of which have appeared in these reports in years past. It was felt however that much of this work, which necessarily lacked co-ordination, might well be brought together in a new Branch and given added emphasis. By so doing new phases of work for which there has grown a demand in recent years, might be undertaken. This decision is directly in line with the requests of producers and farm organizations as well as provincial departments of agriculture and educational institutions throughout Canada and is in keeping with progressive agricultural development in other countries.

PROVINCIAL ACTIVITIES

In most of the provinces divisions of marketing or of economics have now been organized. In a few instances these divisions or branches had their inception ten or more years ago. Similarly, in all of the agricultural colleges in Canada, courses in agricultural economics are now taught and in most instances a separate department of agricultural economics exists. In view of this development, which reflects public interest in the subject, it was considered opportune and desirable to establish in this Department a Branch which would in a measure co-ordinate the work of federal and provincial authorities and undertake work of an inter-provincial nature or of a type which provincial bodies were not prepared to handle. In doing this and in the establishment of the services of this new Branch the intention is to recognize agricultural economics, embracing such divisions as co-operative marketing, farm management, agricultural history and so forth, as a distinct entity carrying on its research, service and educational activities in the closest co-operation with other Branches of this Department and with individuals and institutions in all parts of Canada. The establishment of this new service is the culmination of several years of effort and a further evidence of the desire of this Department to be of service to Canadian agriculture and the public generally.

BRANCH FORMALLY ORGANIZED

The Agricultural Economics Branch was formally organized October 1, 1929, although provision for its establishment had been made a few months earlier. The order creating the Branch called for the appointment of a Commissioner, an Assistant Commissioner, an assistant to the Commissioner and two stenographers. The Commissioner and one stenographer reported for duty October 1 and the Assistant to the Commissioner on November 1. Later a second stenographer was appointed and on April 1, 1930, the Assistant Commissioner assumed office.

During their first six months of operations which were the latter six months of the fiscal year now closed, officials of the new Branch were engaged largely in establishing offices, acquiring equipment and familiarizing themselves with the work of the Department generally. During this period too the Commissioner attended and addressed ten conventions and meetings in connection with the work of the new Branch. In addition several projects were started which will be referred to in more detail.

CO-OPERATIVE ACTIVITIES BEING SURVEYED

There are a large number of co-operative associations in Canada engaged in marketing farm products, buying farm supplies or providing other services

for farmers and others along co-operative lines. In several provinces co-operative activities have reached a very high stage of development, but while a great deal is known about a few of the very large associations little information is available on others and particularly the hundreds of smaller associations which are scattered throughout all of the provinces. As it is the intention of the Branch to do considerable research work with the associations and to be of service to officials and membership generally it was felt that the approach to the subject should be by way of an inventory of what is being done. With this in mind a detailed questionnaire was drawn up designed to bring out information on the operations of these organizations. These have been addressed to the associations and when the returns are in the results will be tabulated. The outcome should be a fairly good picture of co-operative activities in Canada. This sort of survey will have to be carried on at frequent intervals to keep our records up-to-date and to provide a source of data which can be drawn upon with reliability by persons interested in the subject. This survey, supplemented by personal study of the larger associations will start our statistical storehouse, so to speak, in which we expect to accumulate as years go by a worthwhile fund of information on an activity which represents several hundred thousand farmers and handles a turnover of between a quarter and a half billion dollars annually. This survey however, is but the start of a program which it is hoped to build upon and enlarge in the course of the next few years.

ECONOMIC SURVEYS

At the request of the Canadian Horticultural Council and other interested parties the Agricultural Economics Branch is undertaking a survey of conditions under which apples are being produced and marketed. This is part of a general program of research on behalf of the Horticultural industry.

The request for such a study was originally made sometime prior to the organization of this Branch and called for a survey of all phases of the horticultural industry. However a little consideration of the nature of the problem thus involved indicated the impossibility of including all or even several phases of the business in one study. It was decided therefore to start with a survey of the production and marketing of apples which represents one of the important phases of the horticultural industry, and to follow this with such other surveys as funds and personnel would permit.

With this in mind preliminary plans were drafted in co-operation with the Fruit Branch and with other interested bodies. Survey forms have been prepared and all of the necessary details worked out to enable a start on the survey being made as soon as the roads are fit for travel. It is intended to make a detailed study of orchard farming on a total of several hundred representative farms in the several fruit producing regions. From a somewhat larger number of producers as much information as possible will be obtained by questionnaire. This survey will embrace a complete study of business operations and will relate the profitability of farming to the production and marketing practices carried on. Following the survey of production conditions an analysis of marketing practices and results will be undertaken. This survey is but one of many such which will be initiated during the next few years to obtain basic data on actual farm operations.

EDUCATIONAL AND SERVICE

The staff of the Branch, as already stated, has been represented at ten conventions or meetings for the purpose of presenting discussions on agricultural economics and the activities of the Branch. In preparation for these addresses, agricultural production, consumption and foreign trade statistics were assembled and analyzed. There is a very keen interest in this type of information at the

present time due to the competition for markets, both domestic and foreign, and in presenting such data the Branch appears to be rendering a very timely and much appreciated service.

A very keen demand for information on economic subjects by government departments, associations and individuals has been experienced. In acting as a clearing house for information and as a co-ordinating body for provincial agencies interested in economic matters pertaining to agriculture the Branch has already been of considerable service. Indeed the major portion of the time of the staff during the past year has been occupied in assembling and preparing information for those requesting such.

SUPERVISION OF RACE TRACK BETTING

With the assistance and co-operation of the Royal Canadian Mounted Police, the Department of Agriculture supervised betting on all race tracks in Canada during the year 1929.

Race meetings were held on the race tracks of thirty racing associations, with a total of three hundred and thirty-five days racing. The total wagered on all tracks was \$45,580,845, while the total amount retained by associations as their legal percentage was \$3,104,455.65, while \$1,886,800 was paid as prize money.

The following table gives by provinces Canadian race track statistics of betting for the year 1929:—

Province	Number of asso- ciations	Number of days racing	Amounts wagered	Pari-Mutuel receipts retained	Prize money
			\$	\$	\$
Quebec.....	7	87	7,177,709 00	521,176 60	402,700 00
Ontario.....	8	112	27,028,076 00	1,759,561 90	994,100 00
Manitoba.....	3	33	4,691,441 00	334,608 55	175,800 00

PRINTER TO THE KING'S MOST EXCELLENT MAJESTY
1930

*To His Excellency the Right Honourable Viscount Willingdon, G.C.S.I.,
G.C.M.G., G.C.I.E., G.B.E., Governor General and Commander in Chief
of the Dominion of Canada.*

MAY IT PLEASE YOUR EXCELLENCY:

The undersigned has the honour to present to Your Excellency the report
of the Department of National Defence (Militia and Air Services) for the fiscal
year ending March 31, 1930.

Respectfully submitted,

J. L. RALSTON,
Minister of National Defence.

DEPARTMENT OF NATIONAL DEFENCE,
OTTAWA, July 1, 1930.

OTTAWA, July 1, 1930.

The Honourable the Minister,
Department of National Defence,
Ottawa.

SIR,—I have the honour to submit for your consideration, to be laid on the Table of the House, this, the Annual Report of the Department of National Defence (Militia and Air Services) for the fiscal year 1929-30.

I have the honour to be, sir,

Your obedient servant,

G. J. DESBARATS,
Deputy Minister.

REPORT OF THE DEPARTMENT OF NATIONAL DEFENCE, CANADA (Militia and Air Services)

FOR THE FISCAL YEAR ENDING MARCH 31, 1929

REPORT OF THE CHIEF OF THE GENERAL STAFF

The report of the several directorates and branches under the Chief of the General Staff are shown in the following order:—

(a) Militia Service

- (1) Military Operations and Intelligence.
- (2) Military Training and Staff Duties.
- (3) Armament.
- (4) Operation of Wireless Systems.
- (5) Physical Training and Cadet Services.
- (6) Historical Section.

(b) Royal Canadian Air Force

(1) Military Operations and Intelligence

Operations

Attention continues to be given to questions and problems in relation to defence.

Intelligence

The work of collecting, collating and disseminating military intelligence has been well maintained.

Geographical Section, General Staff

General

One control party was employed during the summer of 1929 in the province of Ontario, and topography was carried out in both Ontario and Quebec.

The Annual Course of Instruction in Surveying was held during the period January 7 to October 31, 1929. Seven candidates were authorized to take the course, and one qualified as a Skilled Topographical Surveyor, three were granted "Fair" certificates, and three, found unsuitable, were returned to their units. As part of their instruction this class ran, under supervision, one hundred miles of transit line and two hundred and ten miles of levels.

	square miles
Up to March 31, 1930, the total area surveyed, for which map sheets have been published was.....	43,050
Area fully surveyed (map sheets not published).....	2,000
Area controlled and photographed.....	1,940
Area controlled only.....	500
Total.....	47,490

The above figures include the following new work performed during 1929-30:—

	square miles
New 1" sheets published.....	1,529
Topography.....	1,370
Control.....	1,440
Aerial photography.....	3,250

Aerial Photography

Vertical aerial photographs for the Geographical Section were taken by the Royal Canadian Air Force, during the summer of 1929, over the following areas:—

	square miles
Portions of Peterborough, Rice Lake, Campbellford, Trenton, Tweed, Belleville and Wellington (Ontario).....	2,080
St. Evariste, Armstrong and part of Disraeli (Quebec).....	1,170

Field Work

Control.—The control party was in the field from May 1 to November 16, a period of 27½ weeks. This party ran 840 miles of transit line and 1,500 miles of levels, which completed the control in the Campbellford, Trenton, Belleville, and Wellington sheets.

Magnetic declinations were determined for the following four sheets: Peterborough, Rice Lake, Port Hope, and Belleville.

All computations have now been completed and show a satisfactory degree of accuracy in the field work.

Topography was completed for four standard sheets—Disraeli, Lindsay, Rice Lake, and Port Hope. In addition, the topography for a new 4-inch map of Trenton Air Station and vicinity was completed. The total amount of topography carried out was 1,370 square miles.

Photo Control and Photo Plotting was carried out during the winter of 1929-30, as follows:—

Sheet	Control	Plotting
St. Evariste, Armstrong.....	Nearly completed.....	68 square miles
Peterborough, Belleville and Trenton.....	Completed.....	420 "

Office Work

During the year the compiling, drawing, and publishing of air-route strip maps were undertaken and two strips—No. 1 Montreal to Morrisburg and No. 2 Morrisburg to Kingston—were published, while a further strip—Toronto to Windsor—was taken in hand.

The details of the work accomplished by the Reproduction and Publication Subsections follow:—

Printing—

(a) *For Department of National Defence—*

Four new 1" sheets were published, namely: Carleton Place, Beaverton, Newmarket, Arnprior.....	3,397
One new ½" sheet, Woburn, was published.....	455
Two new air-route strip maps, Nos. 1 and 2, were published.....	812
Fourteen 1" sheets and one ½" sheet were reprinted.....	7,983
Six 2" and 1/20,000 map sheets were reprinted.....	5,518
Two reprints of the Index Map for 1" and ½" sheets were made.....	510
Twenty-six forms and miscellaneous diagrams, etc., were printed.....	3,814
One confidential map was proved.....	20
Miniature targets, printed.....	36,738
Departmental cheques.....	240,145
Three maps for Civil Aviation Report.....	13,963
Two Regimental Colours were reproduced and printed.....	29
A new edition of the Western Front Map was printed.....	475
Grids were overprinted on three special maps.....	360
Co-ordinate cards.....	1,578

(b) *For other Government Departments—*

Twelve sheets of the map of London, Ontario, for the Geodetic Survey, reproduced and printed.....	6,058
Ten sheets for the Geological Survey, printed.....	32,151

Photography—

Wet plate negatives, 10" x 12" to 30" x 40".....	361
Photo-Litho zinc plates, 20" x 26" to 34" x 41".....	321
*Dry plate negatives, 3½" x 4½" to 5" x 7".....	116
*Photographic prints, 3½" x 4½" to 10" x 12".....	503
Blue and black prints, various sizes.....	123
Lantern slides.....	104
Roll films developed.....	11

*Included in these figures are reproductions of 21 Regimental Badges with 213 prints.

Maps Issued—

1" and ½" Topographic map sheets, air-route strip maps and miscellaneous maps sold to public.....	8,262
1" and ½" Topographic map sheets, air-route strip maps and miscellaneous maps issued free—	
National Defence Headquarters.....	2,978
Military Districts.....	4,532
Other Federal Government Departments.....	1,441
Provincial Government Departments.....	178
Educational institutions.....	359
Miscellaneous.....	2,472
	<hr/> 11,960

Total issued..... 20,222

During the period under review maps sold show an increase of 21·4 per cent, while free issues to educational institutions, reference libraries, etc., decreased 10·6 per cent. The total number issued, however, remains practically the same.

The proceeds from sale of maps show an increase of 36 per cent over those for the preceding year.

General Staff and Departmental Library

Volumes presented.....	4
Volumes purchased.....	278
Volumes bound periodicals.....	48
	<hr/>
Total (exclusive of statistics and general data received from other Branches and Departments of the Government).....	330
Volumes accessioned.....	560

Subscriptions to eighty-four weekly, monthly, and quarterly periodicals and eight daily newspapers were continued, the former of which are circulated throughout the Department.

All the books and binding orders placed during the period under review were delivered or completed before the end of the fiscal year.

(2) Military Training and Staff Duties

1. The money available in the N.P.A.M. Vote did not permit of any material change in the program of training during 1929-30. Therefore the policy of concentrating attention and effort towards the tactical training of units and sub-units combined with instruction in the use of weapons was continued.

2. In the N.P.A.M. approximately the same numbers trained as in 1928-29; there was a slight increase in camp training and a corresponding decrease in training at local headquarters.

PERMANENT FORCE

3. It was again considered that the best results would be obtained by assembling as far as possible Permanent Force units at central camps for training with the object of concentrating this year on individual rather than collec-

tive training. This was carried out in the form of instructional courses. Units attended camps as under:—

Petawawa Camp—July 24 to August 24—

Royal Canadian Dragoons.

Royal Canadian Regiment.

Royal 22e Regiment.

Royal Canadian Army Service Corps (from Military Districts 1 to 7).

Sarcee Camp—July 29 to August 29—

Lord Strathcona's Horse (Royal Canadians).

Princess Patricia's Canadian Light Infantry.

Royal Canadian Army Service Corps (from Military Districts 10 to 13).

4. In the case of units other than those above mentioned training was carried out locally.

NON-PERMANENT ACTIVE MILITIA

1. Training was divided generally into unit training at local headquarters or in camp and individual training at schools and courses of instruction.

2. Detachments of mobile artillery were authorized to carry out four days' training at local headquarters and eight days at practice camp. At Petawawa Camp, medium artillery for the first time in Canada trained as mechanized units, using lorries issued to the 3rd Medium Battery, R.C.A. This proved a decided success.

Heavy Artillery (Coast Defence units) trained for eight days at local headquarters and four days in gun practice at the forts.

3. In addition to unit training, Camp Schools not exceeding sixteen days' duration were held at various centres for the qualification of N.P.A.M. personnel.

The following table shows the training completed by units of the Non-Permanent Active Militia:—

SCHOOLS OF INSTRUCTION

The program for Schools of Instruction was based on that which obtained in 1928-29. The results compare favourably with those of last year.

Again Permanent Force personnel rendered all assistance possible within the limitations imposed by the restricted strength of the force. The efficiency of the Instructional Cadre and the very satisfactory assistance its personnel has rendered to the N.P.A.M. at Courses and Schools of Instruction is again brought to notice.

Courses for the Permanent and Non-Permanent Active Militia were held as follows:—

COURSES ABROAD

*Permanent Force**Imperial Defence College*

Lt.-Col. W. G. Beeman, D.S.O., R.C.A., January, 1930, to January, 1931.

Staff College, Camberley

Captain R. O. G. Morton, R.C.A., January, 1928, to December, 1929.

Lieut. (Bvt. Capt.) R. G. Whitelaw, R.C.R., January, 1928, to December, 1929.

Captain M. H. S. Penhale, R.C.A., January, 1929, to December, 1930.

Captain J. C. Murchie, R.C.A., January, 1929, to December, 1930.

Lieut. (bvt. Major) H. L. N. Salmon, M.C., R.C.R., January, 1930, to December, 1931.

Staff College, Quetta

Major E. L. M. Burns, M.C., R.C.E., February, 1928, to December, 1929.

Lieut. (bvt. Capt.) G. R. Bradbrooke, M.C., L.S.H. (R.C.), February, 1928, to December, 1930.

Senior Officers' School

Lt.-Col. W. G. Hagarty, D.S.O., R.C.A., May, 1929, to August, 1929.

Major (bvt. Lt.-Col.) A. E. Harris, R.C.A., September, 1929, to December, 1929.

Major H. O. Lawson, R.C.A.S.C., January, 1930, to April, 1930.

R.A.M.C. College

Captain J. V. Williams, M.C., R.C.A.M.C., February, 1929, to September, 1929.

GUNNERY STAFF COURSE

Captain (bvt. Major) C. V. Bishop, M.C., R.C.H.A., September, 1928, to August, 1929.

Captain (bvt. Major) W. H. Dobbie, D.S.O., R.C.A., September, 1929, to August, 1930.

Lieut. (bvt. Capt.) A. E. Routier, M.C., R.C.A., September, 1929, to August, 1930.

School of Military Engineering

Lieut. A. J. Kerry, R.C.E., August, 1929, to October, 1930.

Advanced Class Military College of Science

Captain G. B. Howard, R.C.O.C., November, 1928, to February, 1931.

Junior Officers' Course, R.A.S.C. College

Lieut. G. E. R. Smith, R.C.A.S.C., March, 1928, to April, 1930.

Ordnance Officers' Course

Lieut. E. H. Parsons, R.C.O.C., February, 1930, to December, 1930.

Equitation

Captain N. A. Gianelli, L.S.H. (R.C.), January, 1929, to May, 1929.

No. 783 A/Sgt. F. A. Green, R.C.D., July, 1928, to May, 1929.

No. 2754 Sgt. G. E. Reade, L.S.H. (R.C.), July, 1928, to May, 1929.

Small Arms Courses

Lieut. G. L. Foster, R.C.R., April, 1929, to September, 1929.

No. 20792 Sgt.-Instr. K. C. McCulloch, P.P.C.L.I., April, 1929, to September, 1929.

Chemical Warfare School

Captain W. G. Colquhoun, M.C., P.P.C.L.I., October, 1929, to November, 1929.

Attachments and Exchanges

Major P. Earnshaw, D.S.O., R.C.C.S., April, 1929, to May, 1929.

Major (bvt. Lt.-Col.) W. G. Hagarty, D.S.O., R.C.A., September, 1929, to October, 1929.

Major (bvt. Lt.-Col.) A. E. Harris, R.C.A., January, 1930, to February, 1930.

Captain J. V. Williams, M.C., R.C.A.M.C., October, 1928, to February, 1929.

Captain W. G. Colquhoun, M.C., P.P.C.L.I., July, 1929, to September, 1929.

Lt.-Col. S. Tamblyn, D.S.O., O.B.E., R.C.A.V.C., November, 1929, to February, 1930.

Captain G. P. Morrison, R.C.A., October, 1929, to April, 1930.

Lieut. and Captain (local Major) J. K. Lawson, R.C.R., April, 1929, to April, 1931.

Captain W. J. Home, M.C., R.C.R., September, 1928, to August, 1930.

Lieut. J. R. Sparling, R.C.A.S.C., October, 1928, to September, 1930.

Lieut. (bvt. Capt.) J. H. Carvosso, M.C., P.P.C.L.I., September, 1928, to August, 1930.

COURSES IN CANADA

Staff College Preparatory Course

A course for officers preparing for the examination for admission to the Staff Colleges at Camberley and Quetta was held at the Royal Military College, Kingston, from October 1, 1929, to February 28, 1930. This course was attended by seven officers, all of whom competed at the examination for the three vacancies allotted to Canada. In addition, four officers of the Royal Canadian Air Force attended for instruction until the end of December, 1929.

Long Course

This course is held at the Royal Military College, Kingston, and is designed to qualify officers of the Non-Permanent Active Militia for commissions in the Permanent Force. Two candidates qualified at the course which commenced in February, 1929, and concluded in May, 1929. Three candidates attended the course which commenced in February, 1930.

Refresher Course

In conjunction with the Long Course, a Refresher Course was held for junior officers of the Permanent Force, which was attended by one officer of the Royal Canadian Signals.

Royal Canadian School of Military Engineering

Courses for Field Works Instructors and Military Foreman of Works were held for personnel of the Royal Canadian Engineers. A total of five non-commissioned officers attended.

Signal and Small Arms Courses

See under "Signal Training" (page 29) and "Small Arms Training" (page 31), respectively.

Militia Staff Course

The Militia Staff Course is designed to train officers of the Non-Permanent Active Militia for employment in appointments on the Staff of Formations in the Field.

The Practical Portion of the seventh post-war course of twelve days' duration was held at the Royal Military College, Kingston, Ont., for candidates from Eastern Canada, and at Sarcee Camp, Alberta, for candidates from Western Canada, during the summer of 1929. Fifty-eight officers qualified at the former and fifteen at the latter. In addition, three officers attended in the East and six in the West as a Refresher Course.

The Theoretical Portion of the eighth post-war course, which consists of a series of lectures, was carried out in the several districts during the winter months; 163 officers attended the written examinations and many others attended the lectures from time to time.

Examination for Promotion to Rank of Colonel, Non-Permanent Active Militia

A special practical examination of three days' duration was held following the Practical Portion of the Militia Staff Course at Kingston, Ont., and Sarcee Camp in order to qualify Lieutenant-Colonels of the Non-Permanent Active Militia for promotion to the rank of Colonel. Nine candidates attended the examination at Kingston and three attended at Sarcee, all of whom qualified.

Cookery Course

A course in cookery for personnel of the Permanent Force was held at Winnipeg, Man. This course was of six weeks' duration and was attended by six candidates.

Qualifying and Specialists' Courses

Courses were held for personnel of the Non-Permanent Active Militia at Royal and Permanent Schools as follows:—

(For Signals and Small Arms see under reports of these respective branches.)

The number of officers and other ranks who obtained certificates at these schools and at Camp Schools is shown in statements appearing on pages 22 and 24.

Staff Tours and Tactical Exercises

Staff Tours and Tactical Exercises were carried out throughout the year under arrangements made by District Officers Commanding.

Promotion Examinations (P.F.)

A total of eleven officers presented themselves at the written examination held in October, 1929; of this number two qualified in one or more subjects for the rank of Major and five qualified for the rank of Captain. Twenty-four candidates sat at the March, 1930, examination; of this number nine qualified in one or more subjects for the rank of Major and seven qualified for the rank of Captain.

Foreign Languages

Interpretership Examinations in French for officers and Gentlemen Cadets, Royal Military College, were held under the regulations of the British Civil Service Commissioners at centres in Canada in June, 1929, and January, 1930, at which two officers and four Gentlemen Cadets qualified as interpreters as follows:—

1st Class, 1; 2nd Class, 5.

Canadian Officers' Training Corps

In addition to the annual training of C.O.T.C. Contingents as shown under "Training" above, there was a very satisfactory attendance of Cadets at the half-yearly examination for Certificates "A" and "B," as shown in the summary of results given on page 26.

The former certificate qualifies a candidate for a commission in the Non-Permanent Active Militia and the latter is equivalent to a certificate for the rank of Captain, Non-Permanent Active Militia, and exempts the holder from the Test Examination for entrance to the Long Course.

SIGNALS

General

Continued progress during the year in signal training of personnel of the Royal Canadian Signals and regimental signallers of the Permanent Force and Non-Permanent Active Militia has been made.

With two exceptions each Military District has now an officer of the Royal Canadian Signals on its staff as District Signal Officer. Due to the shortage of officers it has been necessary to combine the duties of District Signal Officer in Military Districts No. 4 and No. 5, and Military Districts No. 6 and No. 7 under one officer for each of the two districts.

No increase in the Instructional Cadre (Signals) has been effected during the year under review, but the need of further assistant instructors in signalling in all districts is apparent.

Royal Canadian Signals

The limited establishment of the Corps at the end of the fiscal year was 39 officers and 264 other ranks. The strength of the Corps on that date was 27 officers and 226 other ranks, whose duties are distributed as follows:—

	Officers	Other Ranks
District Signal Officers and Instructional Cadre (Signals).....	9	20
Permanent Force—		
M.D. Signals Office and S.I. & T.D.	3	6
R.C. Signals Depot.....	5	51
Royal Canadian School of Signals.....	1	2
Northwest Territories and Yukon Radio System.....	2	34
Royal Canadian Air Force.....		9
Civil Government Air Operations.....	6	62
Air Mail Routes.....	1	42
Total.....	27	226

Regimental Signallers of Permanent Force Units

The Annual Technical Inspection and Classification of Signallers of Permanent Force units were, on the whole, satisfactory. The results for the year under report are tabulated below. There is still a great need of junior officers being trained in units in order that they may supervise and encourage signal training within their units.

Unit	Classified		Under Training	
	Officers	Other Ranks	Officers	Other Ranks

Totals.....	6	6	6

Royal Canadian School of Signals

The Royal Canadian School of Signals operated a summer school at Camp Borden, Ont., during the summer of 1929. Royal Military College and Canadian Officers Training Corps Cadets were attached for training in visual, line and wireless telegraphy, qualifying courses were held for officers and non-commissioned officers of Canadian Signals and courses were held for Permanent Force and Non-Permanent Active Militia personnel qualifying for Instructors and Assistant Instructors certificates in visual telegraphy.

The following table shows the attendance and results of these classes:—

	Officers	Other Ranks
(a) Attendance—		
Permanent Force.....		5
Non-Permanent Active Militia.....	8	66
R.M.C. and C.O.T.C. Cadets.....	18	
Totals.....	26	71
(b) Qualifications Obtained—		
Instructors and Assistant Instructors, Visual Telegraphy.....	4	33
Qualifying—		
Captain.....	2	
Lieutenant.....	1	
Sergeants.....		16
R.M.C. and C.O.T.C. cadets—		
Operator Visual Class I.....	10	
Operator Line Class I.....	4	
Operator Wireless Class I (Partial).....	4	
Totals.....	25	49

Provisional Schools of Signals

During the year the following provisional schools were conducted:—

Visual Telegraphy.....	81
Line Telegraphy.....	12

The number of certificates awarded as a result of above schools is as follows:—

	Officers	Other Ranks
(a) Visual Telegraphy—		
Class I Special.....	1	21
Class I.....	41	581
Class II.....	2	262
Class III.....		84
Total Visual Telegraphy.....	44	948
(b) Line Telegraphy—		
Class I.....	9	46
Class II.....	3	27
Total Line Telegraphy.....	12	73

At local headquarters, when an evening provisional school of signals is conducted, instruction in signalling is arranged for cadets who are twelve years of age or over and are enrolled members of an authorized Cadet Corps.

Boys who undergo this training make particularly desirable recruits for units of the Canadian Signals and are joining the non-permanent signal service in increasing numbers each year.

During the year under report the following number of cadets were awarded certificates:—

1st year (Semaphore).....	2,384
2nd year (Morse).....	277
3rd year (advanced).....	61
Total.....	2,722

Award of Trophies

The Signallers Challenge Cup, for annual competition between regimental signal sections of non-permanent cavalry and infantry units, was won for the year 1929 by The Toronto Regiment, Military District No. 2. This is the second year in succession that this unit has won the Cup.

The Cavalry Signallers Challenge Cup, presented by the Canadian Cavalry Association for annual competition between regimental signal sections of the non-permanent cavalry, was won for the year 1929 by the Manitoba Mounted Rifles, Military District No. 10.

SMALL ARMS SCHOOL

During the period under review, training in the rifle, bayonet, light automatic, machine gun, revolver, section leader training and anti-gas measures was carried out in the Permanent and Non-Permanent Active Militia.

The following annual range courses were fired:—

Permanent Active Militia

Recruits of cavalry and infantry fired an elementary course in the rifle and light automatic. Recruits of other units fired a modified course.

Trained soldiers of cavalry and infantry fired the advanced classification course with rifle, light automatic and Vickers machine gun, machine gun practices being introduced for the first time into the range course of cavalry units. Recruits and trained soldiers of other units fired a shorter course more suitable to their requirements.

The results obtained in the foregoing range course maintained the satisfactory standard of the previous year.

Non-Permanent Active Militia

The program of weapon training is published in "Memorandum for Camps of Instruction, Part I," the various courses being based on those laid down for the British Territorial Army.

The proportion of N.P.A.M. exercised in range practices, in relation to the total of all ranks actually trained and eligible to fire, was 59 per cent, an increase of 3 per cent over the percentage for 1928.

The total number of firers represented by the above proportion was 18,665 (an increase of 1,767), and includes the following arms of the service: Cavalry, Engineers, Signals, C.O.T.C., Infantry, Machine Gun Corps, and C.A.S.C.

The weapons used were the rifle, Vickers machine gun and light automatic, the greatest relative improvement being shown in the last named.

BEST SHOT BADGES

Best Shot Badges for the year 1929 were awarded to the best shot in the Royal Military College and in each squadron, battery, company, independent troop or headquarters wing of cavalry, artillery, engineers, corps of signals, officers' training corps, infantry, machine gun corps and army service corps of the Non-Permanent Active Militia.

The badge is awarded to the non-commissioned officer or man obtaining the highest score in the classification practices of the annual rifle course and the names of winners are published in Militia Orders. Six hundred and seven such badges were awarded for 1929, being an increase of ninety-nine over the number awarded the previous year.

CAMBRIDGE CHALLENGE BOWL COMPETITION

The Cambridge Challenge Bowl was won for the second year in succession by Headquarters, the Royal Canadian Regiment, London, with an average score of 110·7.

This trophy was donated by officers of His Majesty's Regular Army on leaving Canada in 1904, and is awarded to the squadron, battery, company, headquarters or detachment of any unit of the Permanent Force having a strength of thirty all ranks or over obtaining the highest average in the annual rifle course. To be eligible 80 per cent of the competing unit must take part in the competition.

KING'S MEDAL, 1929

The King's Medal for the champion shot of the Military Forces of the Dominion of Canada was won by Lieutenant D. T. Burke, the Governor General's Foot Guards.

RIFLE ASSOCIATIONS

On March 31, 1929, there were in existence 188 military rifle associations and 83 civilian rifle associations.

The Dominion of Canada Rifle Association and all Provincial Rifle Associations held prize meetings during the period under review.

CANADIAN RIFLE TEAM

The team which represented Canada at the National Rifle Association meeting at Bisley, England, in 1929, was an outstanding success. The premier team competition, the Kolapore Cup, was won, and in addition individual members won the Prince of Wales Trophy, the Corporation of London Cup, and the Elkington Aggregate. The greatest achievement was the winning of the King's Prize and the Grand Aggregate by Lt.-Col. R. M. Blair, V.D., the Seaforth Highlanders of Canada, who in each competition had to shoot off a tie with another Canadian.

NOTE.—1. Expenditure shown is for services now covered in N.P.A.M. Sub-Votes "A" and "B".

2. From 1926 to 1929 the M.S.C. and C.S.A.S. have been included under Royal Schools. Certificates to Cadet Instructors, or to Cadets other than C.O.T.C., not included.

(3) Armament

1. Existing armament has been maintained in a serviceable condition as far as limited funds permitted, but a considerable amount of service equipment is becoming much worn due to use at annual training, and additional expenditure in this connection must be contemplated in the near future. This is particularly applicable to expensive technical stores such as dial sights, directors, etc.

2. The reserves of Coast Defence and Field Army Artillery ammunition are lower than a year ago. Provision has been made for the replacement of a large proportion of the year's expenditure, but the funds allotted are not sufficient to permit of replacement being carried out in full.

3. The anti-aircraft equipment in use in this country is obsolete in the British service, and the training possible is such as will, only in a limited degree, maintain the organization and efficiency of Anti-Aircraft Sections. Up to the present it has not been possible to consider purchase of modern equipment owing to the limited funds available.

4. The 3rd Medium Battery, R.C.A., has been issued with lorries to replace horses for training. These lorries, which have a chassis of commercial type, were used at Petawawa Camp during the training season of 1929-30 for the training of Medium Batteries, Non-Permanent Artillery. The change proved to be a decided success, as it enabled a greater amount of training to be carried out than was possible with the limited number of horses on Permanent Force charge. Mechanized traction is considered to be a saving in the long run as compared with the maintenance of horsed batteries. So organized, a battery also requires less personnel.

(4) Operation of Wireless Systems

During the fiscal year 1929-30 a total of twenty-five (25) Radio Stations were operated throughout the Dominion of Canada by the Royal Canadian Signals.

Three new stations were established during this period—two in Manitoba and one in Saskatchewan—while the station operated in conjunction with the Hudson Strait expedition was dismantled upon the cessation of operations in that vicinity.

The following list shows the distribution of the twenty-five Radio Stations:

1. *Northwest Territories and Yukon*

Aklavik, N.W.T.
Dawson, Y.T.
Edmonton, Alta.
Herschel Island, Y.T.
Mayo, Y.T.
Fort Resolution, N.W.T.
Fort Simpson, N.W.T.
Fort Smith, N.W.T.

2. *Alberta*

Grand Prairie, Alta.
High River, Alta.

3. *Saskatchewan*

Ile a la Crosse.
Lac la Ronge.
Ladder Lake.
Pelican Narrows.
Prince Albert.
Waskesiu.

4. *Manitoba*

Berens River.
Cormorant Lake.
Norway House.
Thicket Portage.
Winnipeg.
Winnipegosis.

5. *Ontario*

Camp Borden.
Ottawa.

6. *Air Mail Service.*

St. Hubert.

The Northwest Territories and Yukon Radio System

This system served to link up the Northwest Territories and the Yukon with the Dominion's chain of communications.

The Canadian National Telegraphs and the Canadian Pacific Telegraph at Edmonton are both connected by direct wires to the wireless station at West Edmonton, the southern terminal station of the system.

In addition to providing intercommunication channels between posts in the Northwest Territories and Yukon, this system transmitted a daily news bulletin from Edmonton to all stations in the Mackenzie valley. Aircraft weather reports, air mail reports, stock quotations, and similar services of vital interest to isolated posts were transmitted as requested.

By arrangement, the motorship *Baymaud* belonging to the Hudson's Bay Company, which wintered at Cambridge Bay, and the *St. Roch* belonging to the Royal Canadian Mounted Police were kept in constant touch with the main arteries of communication at Edmonton.

All stations of this system forwarded weather reports twice daily to the Meteorological Services at Toronto.

The Alberta System

The radio stations at High River, Alta., and at Grand Prairie in the Peace River country were operated during the flying season in connection with forestry patrol work. These stations maintained ground to ground communication while planes equipped with R.C.S. built aircraft transmitters provided air to ground communication during flight.

The Saskatchewan System

Owing to the extension of the forestry patrol work along with important mining activities in the northern portions of the province, it was necessary to establish an additional radio station at Pelican Narrows during the spring of 1929. Three of these stations were operated during the flying season only.

The Manitoba System

Two additional low power radio stations were added to the Manitoba chain during the year, one at Berens River, and the other at Thicket Portage (mile 185 Hudson's Bay Railway). Traffic was handled by the Manitoba and Saskatchewan System chiefly for various government departments, in par-

ticular the Forestry Branch, the Parks Board, The R.C.A.F. and the Civil Government Air Operations. In addition a fair amount of commercial revenue traffic was handled between the Canadian National and the Canadian Pacific Telegraphs and outlying points in these provinces served by the radio stations.

The following table shows the amount of traffic handled during the year:—

TABLE II.—R.C.A.F. TRAFFIC REPORT, SASKATCHEWAN RADIO SYSTEM, 1929

The Ontario System

The Radio stations at Camp Borden and Ottawa, in addition to being used as training stations, handled communications between the Depot R.C.S., the R.C.A.F. Training Centre Camp Borden, and N.D.H.Q. Ottawa.

The Ottawa station was also in communication with St. Hubert, P.Q., these stations being used in connection with the air mail services from Rimouski, P.Q.

TABLE VII.—TRAFFIC REPORT, OTTAWA-BORDEN-ST. HUBERT SYSTEM

Totals.....	6,086	6,086	156,600	156,600

AIR MAIL SERVICES

The Royal Canadian Signals are responsible for the installation and operation of radio aids to air navigation for all air mail routes in Canada. The collection and dissemination of weather reports for air mail pilots is an important feature of this work.

The small transmitter originally installed at St. Hubert was replaced during July with a 4½ KVA transmitter designed for both telegraph and telephone transmission. By means of this station pilots using St. Hubert aerodrome are in touch with the latest radio advices concerning the weather on the Ottawa-Montreal, Montreal-Toronto, Montreal-Rimouski and Montreal-New York air mail routes. Some of the air mail planes working from St. Hubert have already been equipped with receiving sets and are carrying operators for the purpose of receiving special weather broadcasts emanating for this station.

The radio operators at St. Hubert copy the regular radio weather broadcasts from Arlington, Va., and, with the assistance of radio and teletype, advices from Rimouski, Montreal, Kingston, Toronto, London and Windsor and Albany, N.Y.

Arrangements are being made for the installation of radio beacon stations at Forest Man., Regina, Sask., Maple Creek, Sask., Lethbridge, Alta., Red Deer, Alta., and London, Ont. The radio aids to air navigation afforded by these stations should prove valuable to lighter-than-air aircraft in the future.

SHORT WAVE COMMUNICATION

During the year a small amount of service traffic has been handled with England via Australia. Owing to the skip distance effect it has frequently happened that direct communication has been interrupted between Canada and England.

Short wave experimental equipment is being despatched to certain stations of the North West Territories and Yukon Radio System. Fort Simpson installation was effected during the winter and encouraging reports of their signal strength in Dawson, Mayo, Aklavik and Edmonton have been received.

A fair percentage of departmental traffic has been handled between Ottawa and Military District No. 6, Halifax, and Military District No. 11, Victoria, B.C., in co-operation with the naval stations at Halifax and Esquimalt. This service has given satisfaction for general routine business.

Short wave communications were maintained with units of the Canadian Signals. Schedules were conducted with the following non-permanent active militia Signal units in Canada:—

- | | | |
|--------|----------|-------------------------|
| No. 22 | Company— | Edmonton, Alta. |

| No. 10 | “ | —Winnipeg, Man. |
| No. 17 | “ | —Port Arthur, Ont. |

(5) Physical Training and Cadet Services

PHYSICAL TRAINING

In fulfilment of the agreement with provincial educational authorities to co-operate in the physical instruction of student teachers at Normal schools and other centres, the department now maintains a staff of twenty-nine assistant instructors of the Permanent Force, who during the year under review instructed 9,841 candidates. Of these, 4,659 after completing the required course and passing an examination received certificates of competency to instruct in the exercises and games contained in the official “Syllabus of Physical Training for Schools.”

Classes are held under the supervision of the District Cadet Officers, who usually conduct the examinations and issue the certificates.

In order that these officers and assistant instructors should be kept informed as to the most recent developments in physical education, a refresher course of six weeks' duration was held at the Royal Military College during the summer months, with nine officers and twenty-one W.O's and N.C.O's in attendance.

CADET TRAINING

1. Cadet training generally continues to receive the support of educational authorities. Numbers have constantly increased until there is now a total of 947 active units with a strength of over 130,000 Cadets, distributed by provinces as under:—

Alberta.....	5,806
British Columbia.....	6,109
Manitoba.....	3,020
New Brunswick.....	2,915
Nova Scotia.....	3,347
Ontario.....	37,496
Prince Edward Island.....	701
Quebec.....	66,499
Saskatchewan.....	4,414
	<hr/>
	130,307

The Earl Grey Trophy, awarded annually to the province having the largest number of Cadets in proportion to boys attending school, continues to be held by the province of Quebec.

2 In the training of cadets importance is attached to instruction in first aid to the injured. District Medical Officers are, wherever possible, forming classes of instruction in this important subject; the Canadian Branch of the St. John Ambulance Association assists in this training by organizing competitions for which it offers trophies and medals, and also by donating this year one thousand copies of the official text-book, which is supplied in either English or French as required.

3. Signalling is also popular with Cadets, and each year several hundred boys are instructed in this subject.

4. Miniature rifle practice also receives attention, and interest in this branch of training is well maintained. In the matches conducted during the winter months by the Dominion of Canada Rifle Association 305 Cadet teams fired, while in the Empire-wide match for His Majesty the King's Trophy 5,751 Canadian boys took part. The Canadian team of 3,000 boys lost His Majesty's Trophy by a small margin to South Africa, with the British Isles in third place. In all 40,510 boys, representing all parts of the Empire, competed in this match.

In this event a shield awarded to the best Senior Cadet Corps of the Empire was won by the Christian Brothers College Cadets, No. 98, Kimberley, South Africa, with Hamilton Central Collegiate Institute in second place. A similar shield for the best Junior Cadet Corps was won by the Royal Marine Volunteer Cadet Corps, Deal, with No. 134, Calgary Public Schools Cadet Regiment (Central School), Calgary, in second place.

Other trophies are the Earl Jellicoe Sword and the Earl Haig Sword. The first was won by No. 403, Millbrook Cadet Corps, Millbrook, Ont., with No. 819, Portland Cadet Corps, Saint John, N.B., third. The Earl Haig Sword was won by the Streete Court School, Westgate-on-Sea, Kent, with No. 134, Calgary Public Schools Cadet Regiment (Upper Hillhurst School), Calgary, Alta., second, and No. 134, Calgary Public Schools Cadet Regiment (Sunnyside Bungalow School), Calgary, third.

In these competitions, Canadian boys had the distinction of winning more medals than the competitors from all other parts of the Empire combined. The figures follow:—

	Canada	Rest of Empire
Silver Medals.....	72	35
Bronze Medals.....	172	134

Visiting Cadets

During the summer of 1929 a party of fifteen Cadets of O.T.C. contingents from England and Scotland visited Canada and took part in the matches of the D.C.R.A. It is understood that a similar detachment will come out in 1930.

(6) Historical Section

COLLECTION, CLASSIFICATION AND DISPOSAL OF DOCUMENTS

During the year a number of wooden shelves on which many of the records have hitherto been accommodated were replaced by steel cabinets and the erection of a fire-proof vault made it possible to remove the original copies of War Diaries and the more valuable records into a place of safety.

A large amount of historical material relating to the Great War, consisting of reports, operation orders, maps, aeroplane photographs, correspondence and other matter dealing with operations in the field, mobilization, equipment and embarkation of the C.E.F., has been received from ex-officers of the Canadian Expeditionary Force.

A large quantity of C.E.F. documents have been sorted and classified, 2,289 new files opened, contents indexed and made available for reference.

A block of 1,855 files which originated in the office of the Overseas Minister, London, England, during the war was taken over from the Directorate of Records and precised and indexed for reference purposes.

The triplicate copies of the War Diaries of five C.E.F. units have been checked, and completed for the use of regimental historians; 670 missing folios were copied from originals; the diaries were transferred to the custody of the perpetuating Militia units.

PERPETUATION OF C.E.F. UNITS AND AWARDS OF BATTLE HONOURS

Two hundred and forty-five lists of Battle Honours covering 82 regiments of the Canadian Permanent and Non-Permanent Active Militia and 163 units of the C.E.F. were prepared for submission to His Majesty the King for approval. Claims for Battle Honours, not provided for under the regulations, were investigated and reported upon. The services of Canadian Pioneer, Labour, Infantry Works and Railway Battalions in the C.E.F. were investigated with a view to determining eligibility for honours. Minutes and reports of the Battle Honours Committee were drafted and detailed information supplied as called for by the Committee.

COMPILATION OF AN HISTORICAL ACCOUNT OF THE CANADIAN FORCES IN THE GREAT WAR

The preparation of material and maps for the first general volume of the official history has been continued.

Assistance has been given to regimental historians; the typescript of the history of the 20th Battalion, C.E.F. has been checked and comments forwarded to the Historian; material has also been copied and information

supplied to the Historians of the 24th, 44th, 46th, 78th Infantry Battalions, 2nd C.M.R. Battalion, No. 1 Canadian General Hospital and 8th Battalion, Canadian Railway Troops.

The compilation of a precis and chronological record and index of documents and events relating to the participation of Canada in the Great War, has been undertaken; this when completed will be an encyclopaedia of outstanding events and legislation passed in connection with the War.

Four maps were compiled to illustrate the four principal phases of the operations of the Canadian Corps at Passchendaele, October and November, 1917.

Progress has been made in indexing, checking and consolidating statistics compiled in the Record Office covering all enlistments and casualties in the C.E.F.

PREPARATION OF HISTORICAL MONOGRAPHS, NARRATIVES, ETC., IN CONNECTION WITH THE MILITARY HISTORY OF CANADA

Short histories of five units of the Canadian Militia were compiled and forwarded to the regiments concerned.

A record of service of all Canadian Veterinary Officers who served with the Canadian Contingents in South Africa together with a short history of the Canadian Army Veterinary Services, was prepared.

A report on Arnold's march from Cambridge, Mass., to Quebec in 1775 was compiled.

Statements have been prepared and research carried out in connection with the alliance of Canadian Militia regiments with regiments of the British and Dominion armies. Proposed designs of badges and devices for various militia regiments have been examined as to historical significance, and reported upon.

THE COMPILATION OF HISTORICAL DATA RELATING TO THE WAR FOR THE HISTORICAL SECTION (MILITARY BRANCH) COMMITTEE OF IMPERIAL DEFENCE, LONDON

Draft chapters of the British Official History covering the Actions of St. Eloi Craters and Mount Sorrel and Hooge were read, and comments were collected from over fifty senior officers of the Canadian Corps who were present at these operations. The comments were checked and collated, important extracts copied and sent with the notated draft chapters to the British Official Historian. Maps were prepared to illustrate the positions of Canadian units at the battle of Mount Sorrel, and 72 Operation Orders and Reports on Operations were selected, copied and sent to the British Historian.

In addition to the above, and for the further information of the British Historian, a monograph on the Growth and Control of the Overseas Military Forces of Canada was compiled; outlining the various phases in the evolution of the C.E.F.; covering all Arms and Services, Commands and Appointments; showing strengths, distribution, organization and administration of Canada's contribution during the Great War.

SUPPLY OF INFORMATION TO HISTORICAL INVESTIGATORS AND THE FACILITATION OF THEIR RESEARCHES

Historical data supplied under this heading included:—

Biographical accounts of Sir Edward Kemp, General Sir William Otter and Brigadier-General R. J. F. Hayter.

Notes in connection with the tenth anniversary of the Alcock-Brown flight from Newfoundland to Ireland.

Historical notes on Canadian competition in rifle shooting at Bisley.

A comparative statement of figures relating to the cost in lives and money of the Great War and ten other recent wars.

Statistics regarding allied armies from July to November, 1918, including combatant and ration strength, maximum advance in miles, captures in men and guns.

A statement showing extent of participation in the Great War by all nations.

Data on official action taken in Canada on announcement of war made by Great Britain in 1914.

Notes and published statements relating to the Armistice, November, 1918.

Memorandum relating to university students in the Great War.

A complete list of Canadian Highland battalions raised during the war which proceeded to England.

A monograph with quotations from authorities on "The reasons for undertaking and continuing the Flanders Offensive, July-November, 1917."

Statement of ammunition, explosives, food and other supplies used by the Canadian forces during the war.

A list of senior officers serving in France with the Canadian Corps during period July to November, 1918, showing, rank, decorations, and appointments held.

A list of all Canadian units which served on the Western Front. Prepared for the Canadian War Memorial being erected on Vimy Ridge.

(b) The Royal Canadian Air Force

The direction and control of aeronautics in Canada, both civil and military, come under the jurisdiction of the Department of National Defence. The powers and duties involved are exercised under the direction of the Minister by four separate branches of the Air Services, namely, the Directorate of Civil Government Air Operations, the Controller of Civil Aviation, the Aeronautical Engineering Division, and the Royal Canadian Air Force.

The first three of these branches are responsible directly to the Deputy Minister, and information regarding them may be found in the "Civil Aviation" section of this report, and also in the separate "Report on Civil Aviation, 1929," which can be obtained by application to the Secretary, Department of National Defence, Ottawa.

The Royal Canadian Air Force

The Royal Canadian Air Force is the Military Branch of the Air Services. The Chief of the General Staff, through the Director, R.C.A.F., administers and controls all military air operations.

The Royal Canadian Air Force has the following composition:--

(a) The Active Air Force.

(b) The Reserve.

(a) The Active Air Force

The establishment of the Permanent Active Air Force of Canada consists of 204 officers and 732 airmen permanently embodied for continuous service, and available for general service, including training and operations for civil government departments. The strength of the Royal Canadian Air Force was 175 officers and 669 airmen on March 31, 1930. Out of this total about half were attached for duty with the other branches of the Air Services.

(b) The Reserve

The policy of the department is to create a reserve list consisting of personnel qualified in the several branches of Air Force duties.

The Reserve will be inactive except for such special courses as may be authorized by the Honourable the Minister, though personnel on the Reserve will be liable to call for duty with the Active Air Force.

Headquarters, R.C.A.F.

R.C.A.F. Headquarters is organized as follows:—

- Director, R.C.A.F.
- Assistant Director, R.C.A.F.
- Staff Officer Personnel.
- Staff Officer Equipment.
- Staff Officer Organization.
- Staff Officer Training.
- Staff Officer Operations and Intelligence.
- Staff Officer Regulations.

R.C.A.F. Station, Vancouver

R.C.A.F. Station, Vancouver, B.C.—The station is well equipped in regard to hangars, shops, and slipways. Barrack accommodation and housing for the personnel are required.

R.C.A.F. duties:—

- (1) Seaplane flying training for personnel of the R.C.A.F., and Civil Government Air Services (*ab initio*).
- (2) Winter training—Officers and airmen.
- (3) Combined operations and training with Naval and Military Forces.
- (4) Training of Commercial Pilots.

During 1929 *ab initio* seaplane training was carried out, at which 41 officers and 10 N.C.O.'s attended, all of whom qualified as seaplane pilots.

R.C.A.F. Station, Camp Borden

The Air Station at Camp Borden carries out training of personnel for all the branches of the Air Service. During the fiscal year 1929-30 training was carried out as follows:—

(a) Refresher flying courses were given to two Permanent Officers and one N.C.O. Pilot and twenty-six Non-Permanent Officers.

(b) Training for Provisional Pilot Officers.—Forty-two Provisional Pilot Officers underwent their first term *ab initio* flying training, thirty-four of whom passed their examinations at the completion of the term.

Twenty-eight Provisional Pilot Officers attended for the second term of *ab initio* flying training, twenty-five of them successfully completing their second term.

Ten third term Provisional Pilot Officers attended, all of whom successfully passed their examinations upon the completion of the course and qualified as pilots. Four of the successful candidates were given further flying instruction and granted Non-Permanent Commissions in the R.C.A.F. It is expected that one more of this term will be given a commission in the near future.

(c) Three Commercial Pilots received flying training and they all passed their tests.

(d) An N.C.O. Pilots' Course was given, ten airmen attending, nine of whom qualified as N.C.O. Pilots (*ab initio*).

(e) A Parachute Course was given, at which seventeen officers and airmen attended. All qualified.

(f) A Flying Instructors' Course was given, at which twenty-two officers attended. These officers were classified, or, in the case of former instructors, reclassified, at the completion of the course.

(g) A Technical Training Course for boys was carried out, and forty boys attended, thirty-eight of whom qualified.

(h) Twenty-five Flying Club Instructors received a Flying Instructors' Course, fourteen of whom qualified.

R.C.A.F. Training—Generally

R.C.A.F. training may be divided into two categories: training for officers and for airmen.

The training for officers and airmen at Vancouver and Camp Borden during the year has been most successful, both as regards service personnel and those attached to other Government Air Services.

R.C.A.F. officers have been attached for courses of instruction at the Royal Military College, Kingston, and elsewhere throughout the country.

Officers of the Royal Canadian Air Force attached for training with the Royal Air Force in England:—

	Officers Attending

(e) Armament Course, Eastchurch.....	1
(f) Aeronautical Engineering, Imperial College of Science.....	1
(g) War Staff Course—Royal Naval Staff College, Greenwich.....	1

Provisional Pilot Officers' Training

The idea underlying the present scheme of the R.C.A.F. Provisional Pilot Officers' training is to obtain, with the minimum of expense, a class of young officer having, in addition to his knowledge of flying, a thorough all-round education, with special qualifications on the technical side. With this in view, arrangements have been made with the Canadian universities to accept for Air Force training a number of students in their first year from the Applied Science and Engineering Faculties, and train them at Camp Borden during the summer vacations each year of their university course. A satisfactory response has been made, and numbers greatly in excess of the vacancies apply each year. A number of Gentlemen Cadets from the Royal Military College are accepted each year in the same way. The scheme of training is shown in a pamphlet issued on the subject, which can be obtained by application to the Secretary, Department of National Defence, Ottawa.

*Training for Airmen**Technical Training of Boys and Airmen at Camp Borden*

This scheme of training was approved on November 5, 1925, and was inaugurated on July 4, 1927. During the fiscal year 1929-30, forty boys from all parts of Canada reported at R.C.A.F. Station, Camp Borden, for two months' training. In order to make available a supply of well-trained air mechanics for civil aviation it is intended to increase the numbers attending this course. A pamphlet containing information regarding the plan of training for airmen is available and can be obtained on application to the Secretary, Department of National Defence, Ottawa.

Combined Operations with the Naval and Military Forces

Six operations were carried out in conjunction with the military forces, consisting of reconnaissance flights, transportation, and tactical exercises, with a total of 173 hours' flying time. One operation of five hours' duration was carried out for transportation of naval officers.

REPORT OF THE ADJUTANT-GENERAL

(1) Organization

(A) PERMANENT ACTIVE MILITIA

The vote for the fiscal year 1929-30 remained the same as for the previous year, and allowed only slight changes in establishments.

Recruiting

On 1st April, 1929, the strength in warrant officers, non-commissioned officers and men was 2,852.

During the year there were 840 enlistments and 583 discharges.

On 31st March, 1930, the strength in warrant officers, non-commissioned officers and men was 3,109.

Establishment and Strength

The following table shows the Peace Establishment, Limited Establishment, and actual strength of units of the Permanent Active Militia, on March 31, 1930:—

PERMANENT ACTIVE MILITIA

Unit	Peace Establishment			Limited Establishment

Organization

"A" and "B" Batteries, Royal Canadian Horse Artillery, and the 3rd Medium Battery, Royal Canadian Artillery, have been placed on establishments for mechanized batteries, under which horse drawn vehicles are re-placed by tractor drawn vehicles.

Alliance

His Majesty the King has authorized the alliance of The Royal Canadian Army Veterinary Corps to the Royal Army Veterinary Corps of the British Army.

(B) NON-PERMANENT ACTIVE MILITIA

Organization

The following changes in organization have been authorized:—

Cavalry—

The Queen's Own Canadian Hussars has been included with units in the Corps of Hussars.

Artillery—

The 62nd Field Battery (How.), Canadian Artillery, has been authorized to organize at Duncan, B.C.

Signals—

Signal Battalions, Canadian Corps of Signals, have been re-organized into 11 Divisional Signals, each consisting of a Headquarters and three companies.

Organization of the 8th Divisional Signals in Military District No. 2 and the 11th Divisional Signals in Military District No. 11, is restricted to one company.

Canadian Officers' Training Corps—

The University of Western Ontario Contingent has been increased by one company of four platoons.

Queen's University Contingent has been decreased by one platoon.

The University of New Brunswick Contingent has been increased from one company (four platoons), to a Battalion Headquarters and two companies (three platoons each).

British Columbia University Contingent has two companies of two platoons each, in place of two companies of four platoons.

Universite de Montreal Contingent has been increased by a Battalion Headquarters and one company of four platoons.

La Salle Contingent at Quebec, P.Q., has been disbanded.

Infantry—

The 1st British Columbia Regiment (Duke of Connaught's Own) has been converted into a Rifle Regiment.

The 3rd (Reserve) Battalion (195th Bn., C.E.F.), has been authorized as an additional unit of The Regina Rifle Regiment.

The 4th (Reserve) Battalion (138th Bn., C.E.F.), has been authorized as an additional unit of The Edmonton Fusiliers.

1st Bn., Les Franc-Tireurs du Saguenay, is now attached to the 13th Infantry Brigade instead of to the 15th Infantry Brigade.

The 1st Bn., The St. John Fusiliers has been attached to the 16th Infantry Brigade.

The infantry units in Military District No. 3 have been rebrigaded as under:—

7th Inf. Bde.	8th Inf. Bde.	9th Inf. Bde.
1st Bn. The Princess of Wales' Own Regt.	1st Bn. The Lanark and Renfrew Scottish Regt.	1st Bn. The Hastings and Prince Edward Regt.
1st Bn. The Argyll Light Infantry.	1st Bn. The Grenville Regt. (Lisgar Rifles).	1st Bn. The Northumberland Regt.
1st Bn. The Victoria and Haliburton Regt.	1st Bn. The Stormont, Dundas and Glengarry Highlanders.	1st Bn. The Durham Regiment.
1st Bn. The Peterborough Rangers	1st Bn. The Ottawa Highlanders.	1st Bn. The Frontenac Regiment.
1st Bn. The Brockville Rifles (attached).	1st Bn. Le Regiment de Hull (attached).	

Unbrigaded

1st Battn. The Governor General's Foot Guards.

Medical—

The Canadian Army Medical Corps has been reorganized as set forth in General Order 132 of 1929.

The detail of Cavalry Field Ambulances and Field Ambulances remains the same, except that No. 33 Field Ambulance at Edmonton, Alta., has been authorized to organize.

Chief changes made are—

- General Hospitals have been reconstituted as "Reserve" units.
- Reserve Casualty Clearing Stations have been reconstituted as active units.
- All officers of the C.A.M.C. other than those serving with reserve units are carried on General List, C.A.M.C.

C.A.M.C. officers posted to reserve units and as Medical Officers of reserve units of other arms of the service, are carried on a reserve General List, C.A.M.C.

Peace Establishments

Revised Peace Establishments have been authorized as referred to hereunder:—

Artillery—

A Field Brigade, Canadian Artillery (Mechanized), and a Medium Battery, Canadian Artillery (Mechanized), as published in the Appendix to General Order 42 of 1930.

Signals—

A Divisional Signals, Canadian Corps of Signals, as published in General Order 83 of 1929.

Medical—

Canadian Army Medical Corps as published in the Appendix to General Order 133 of 1929.

Nomenclature

The following units have been redesignated as stated:—

<i>Old Title</i>	<i>New Title</i>
3rd (New Brunswick) Medium Brigade, Canadian Artillery.	3rd (New Brunswick) Medium Brigade, Canadian Artillery (The Loyal Company of Artillery).
The Royal Highlanders of Canada.	The Black Watch (Royal Highlanders) of Canada.
1st British Columbia Regiment (Duke of Connaught's Own).	The British Columbia Regiment (Duke of Connaught's Own Rifles).

Localization

The localization of certain units has been changed with due regard to local conditions and population.

Battle Honours

His Majesty the King has approved the award of battle honours as under:—
The North West Campaign, 1885—

The Governor General's Body Guard.. ..	"North West Canada, 1885."
The Governor General's Foot Guards.. ..	"North West Canada, 1885."
The Queen's Own Rifles of Canada.. ..	"North West Canada, 1885."
The Halifax Rifles.. .. .	"North West Canada, 1885."
Les Voltigeurs de Quebec.. .. .	"North West Canada, 1885."
The Royal Grenadiers.. .. .	{ "Batoche."
	{ "North West Canada, 1885."
The Canadian Fusiliers.. .. .	"North West Canada, 1885."
The York Rangers.. .. .	"North West Canada, 1885."
The Simcoe Foresters.. .. .	"North West Canada, 1885."
The Durham Regiment.. .. .	"North West Canada, 1885."
Les Carabiniers Mont-Royal.. .. .	"North West Canada, 1885."
The Princess Louise Fusiliers.. .. .	"North West Canada, 1885."
	{ "Fish Creek."
The Winnipeg Rifles.. .. .	{ "Batoche."
	{ "North West Canada, 1885."

The above award of battle honours supersedes the award of battle honours in respect of the North West Campaign, 1885, published in General Orders (11) dated June 1, 1888; 2 of 1912 and 69 of 1919.

The Great War—

The award of Great War Battle Honours for regiments and corps of the Permanent and Non-Permanent Active Militia of Canada, and units of the Canadian Expeditionary Force, as shown in lists, numbers 1 and 2, published as appendices to General Orders 110 and 123 respectively of 1929.

Further lists of awards when approved by His Majesty will be published in due course.

Alliances

During the past year His Majesty the King has granted authority for several units to be allied as follows:—

<i>Canadian Regiment</i>	<i>Regiment with which allied, British</i>
The Governor General's Body Guard.	The Queen's Bays (2nd Dragoon Guards).
1st Hussars.	11th Hussars (Prince Albert's Own).
The Saskatchewan Mounted Rifles.	9th Queen's Royal Lancers.
The Governor General's Foot Guards.	Coldstream Guards.
The Victoria Rifles of Canada.	The King's Royal Rifle Corps.
The Elgin Regiment.	The Northumberland Fusiliers.
The Perth Regiment.	The Cameronians (Scottish Rifles).
The Peel and Dufferin Regiment.	The Lancashire Fusiliers.
The York Regiment.	The East Yorkshire Regiment.
The Annapolis Regiment.	The Prince of Wales's Volunteers (South Lancashire).
The Manitoba Rangers.	The Sherwood Foresters (Nottinghamshire and Derbyshire Regiment).
The Vancouver Regiment.	The Buffs (East Kent Regiment).
Canadian Army Veterinary Corps.	Royal Army Veterinary Corps.
	<i>Australian</i>
The Royal Montreal Regiment.	The 14th Battalion.
	<i>New Zealand</i>
The Royal Montreal Regiment.	The Waikato Regiment.

Perpetuations

The perpetuation of the undermentioned units of the Canadian Expeditionary Force has been authorized as follows:—

<i>Unit of Canadian Expeditionary Force</i>	<i>Unit of Canadian Militia by which perpetuated</i>
1st Canadian Mounted Rifles Battalion.	1st Regiment, The Manitoba Mounted Rifles, and 1st Regiment, The Saskatchewan Mounted Rifles.
12th Battalion.	1st Battalion, The Royal Rifles of Canada.
171st Battalion.	2nd (Reserve) Battalion, The Royal Rifles of Canada.
209th Battalion.	1st Regiment, 14th Canadian Light Horse.
216th Battalion.	3rd (Reserve) Regiment, The Mississauga Horse.

Discipline

The discipline of the Permanent and Non-Permanent Active Militia during the past year has been satisfactory. The number of convictions by District Court Martial for the year was 47.

Regimental Facings

The Peel and Dufferin Regiment has been authorized to adopt white as the colour of its regimental facings.

(2) Personal Services

The various establishments authorized for the officer personnel of units of the Active Militia have been generally well maintained, and the endeavours of Commanding Officers to obtain young gentlemen of high educational standard to accept appointments to commissions in the Non-Permanent Active Militia, and the keen interest manifest throughout have been productive of excellent results.

The introduction of regulations making the rank of 2nd Lieutenant the junior commissioned rank for officers of combatant arms of the service, which was brought into effect during the year under review, is considered an improve-

ment, and increased efficiency may now be expected in the case of young officers, who will, in the initiatory stage of their military career, receive a longer period of military training, and become better qualified to fit themselves for promotion. Commanding Officers generally were eager for this change in the regulations, as it will afford them the opportunity of judging whether new officers are likely to become capable and worthy of advancement, prior to establishing their seniority in the higher rank of Lieutenant.

Changes in commands of Brigades, Regiments, Battalions, and units generally, of which there have been 67 during the year, have been regularly administered as they became due. In a few cases where recommended, and where it was considered to be in the best interests of the service, limited extensions were granted.

District Officers Commanding have rendered the regulation returns respecting officers who are carried on the Reserve of Officers list, and the general list of all such officers which is maintained at Defence Headquarters has therefore been kept under proper revision.

The number of new appointments to commissions in the Non-Permanent Active Militia during the twelve months ended March 31, 1930, is 911.

The total number of document commissions prepared and issued during the same period is 1,436.

Fifty-four document warrants were also prepared and distributed.

Appointments and Retirements, Permanent Active Militia

The number of resignations and retirements in the Permanent Active Militia, which were authorized during the year, amounted to 19, while 12 new appointments were authorized.

List of Officers, Canadian Defence Forces

A revised list of officers of the Canadian Defence Forces (Part I) has been completed, and this new edition, which includes references respecting officers of the three arms (Naval, Military and Air Service) should be available from the printers for distribution very shortly.

The current issue of Part II, which contains the war service of officers, list of officers carried on the Reserve of Officers, as well as other special reference information, was produced in December, 1927. Work in connection with having this volume revised is now in progress, with a view to having a new edition made available during the present year.

(3) Medical

During the year 23 Medical Units trained at Camps of Instruction, and 10 at local Headquarters; 11 Provisional Schools were held, and 3 Correspondence Schools. In addition to these 5 District Camp Schools were held. From these Schools, the total number of Officers and Nursing Sisters qualifying for promotion, is 80. The number of Other Ranks qualifying for promotion is 36.

The R.C.A.M.C. has also provided medical attendance to the Royal Canadian Air Force; 2 Officers and 7 Other Ranks being detailed especially for that work. Two R.C.A.M.C. Officers are also detailed to work with the Naval Services.

The health of the Permanent Force Troops has been good throughout the year; the total number of patients treated in hospital, or quarters, being 3,185. This was made up as follows:—

Royal Military College.....	225
Permanent Force.....	1,766
Non-Permanent Active Militia.....	394
Royal Canadian Air Force.....	393
Royal Air Force.....	1
Royal Canadian Navy.....	381
Royal Navy.....	15
Canadian Officers' Training Corps.....	8
Civilians.....	2
	<hr/>
	3,185

These figures show a decrease of 131 in the number of patients treated, as compared to the previous year.

There were 20 deaths during the year, caused as follows:—

Pneumonia.....	(P.F.)	2
Nephritis.....	"	1
Aneurism of aorta.....	"	1
Angina pectoris.....	"	1
D.A.H. (heart).....	"	1
Cerebro spinal syphilis.....	"	1
Acute hepatitis.....	"	1
Rheumatic fever.....	"	1
Paraphlegia.....	"	1
Carcinoma (stomach).....	"	1
Pneumonia.....	(R.C.A.F.)	2
General injuries (aeroplane crashes).....	"	3
Suicide.....	"	1
Pneumonia.....	(Cadet R.M.C.)	1
Intestinal obstruction.....	(N.P.A.M.)	1
General injuries (aeroplane crash) (Civilian).....		1
		<hr/>
		20

Medical Boards and Medical Examinations during the year amounted to 8,015.

In addition to the ordinary Military Medical Training, the Medical Department conducts a Centre of Training for the St. John Ambulance Association, giving special attention to First Aid Training for the Cadet Services, the Regimental Medical Services and the Field Medical Units. During the year the awards made to the Military Services, of St. John Ambulance Certificates, totalled 346. In the various Districts 18 Teams entered for competition for the District Shields. Eight of these District Shields were awarded, and a competition was held among these 8 Teams for the Mary Otter Dominion Trophy, for St. John Ambulance work. The Trophy was won by a Team from No. 3 Detachment R.C.A.M.C., at Kingston.

Pay Services

The functions of this directorate during the fiscal year were much the same as during the previous one. The issue of pay and allowances to the Permanent and Non-Permanent Active Militia and the Royal Canadian Air Force, (including the payment of troops and local accounts for supplies, maintenance, repairs, etc., and accounting in the various Military Districts), is carried out by detachments of the Royal Canadian Army Pay Corps at National Defence Headquarters and at the headquarters of each Military District. The expansion of Air Services has been responsible to some extent for an increase of work in the Pay Services.

The strength of the Royal Canadian Army Pay Corps as at March 31, 1930, consisted of 19 officers and 65 other ranks, two of the latter being detached for duty at the Royal Military College.

All detachments of the R.C.A.P.C. and District Pay Offices were inspected by the District Officers Commanding during the year. The Director of Pay Services also inspected these offices, with the exception of four which he had inspected during the previous year. Reports received in this connection were all favourable.

The undermentioned financial statements, comprising Appendix "B," cover the fiscal year ending March 31, 1930, and show the expenditure on account of Pay and Allowances for the Permanent Active Militia and the Royal Canadian Air Force:—

No. 1.—Statement of expenditure by Stations on account of pay and allowances of the Permanent Active Militia for the fiscal year 1929-30.

No. 2.—Statement of expenditure by Districts on account of pay and allowances of the Royal Canadian Air Force for the fiscal year 1929-30.

The Pay Services is also responsible for the disbursements on claims received from ex-members of the Canadian Expeditionary Force, or their dependents, in regard to adjustments of Pay, Separation Allowance and War Service Gratuity. During the year under review, the following amounts payable out of Adjustment of War Claims Vote, in respect of claims coming under the headings mentioned, have been authorized for payment:—

Pay and allowances.....	\$ 3,254 63
Separation allowance.....	17,109 00
War service gratuity.....	17,346 21
Total.....	\$37,709 84

5. Records

During the year ending March 31, 1930, the military staff of the Record Office was reduced by three, and the civil staff by one. The Director of Records was transferred to Military District No. 10, and the appointment of Director of Records abolished. The volume of work accomplished by the office shows no decrease as compared with the previous fiscal year.

Documents Section

Requests received from the Department of National Defence, other Government departments, the British Empire Service League and the general public necessitated the withdrawal and research of 200,657 sets of documents.

The machine work in connection with the compilation of C.E.F. statistics has been completed, and the task of compiling these figures into permanent ledger form is being proceeded with. A return showing casualties, for each and every day of the war, for each and every unit of the C.E.F. is being compiled for the department's official history and it is expected that this work will be completed during the fiscal year 1930-31. Satisfactory progress has been made on the work in connection with the Book of Remembrance.

In addition to the routine work of the C.E.F. Registry, the volume of which indicates no decrease, steps were taken to transfer to the custody of Public Archives three-quarters of a million overseas files.

The task of assembling and rearranging Paylists of C.E.F. units in Canada, and Non-Permanent Active Militia units mobilized for active service, has been completed and a card index compiled. Cancelled pay cheques issued to personnel of the C.E.F. and Non-Permanent Active Militia during the war period have been filed in proper sequence and are readily accessible for reference. The routine work in connection with the verification of pay matters indicates an increase in enquiries.

Graves Registration

Notification of the death in Canada of 2,289 ex-members of the forces has been received and of these 1,129 graves have been, to date, officially recorded in the department. In 364 cases arrangements have been made to mark the graves permanently with the regulation headstone.

The draughting work in connection with the Vimy Memorial has been completed, and all necessary material is now in the hands of the draughtsmen overseas.

The usual identification work in connection with effects recovered with bodies found in battle areas has been carried out and definite identification was made in 32 cases.

Considerable correspondence was received from relatives of deceased soldiers buried overseas requesting advice as to the location of graves and the best method of reaching same.

Honours and Awards

It is of interest to note that the work of granting and replacing war medals has increased over the previous year. This indicates that returned men are still vitally interested in their awards. During the year an effort was made to get in touch with recipients whose medals were not issued, and good results followed.

Many cases have been submitted to the Awards Board from the Permanent and Non-Permanent Active Militia for the award of Long Service Decorations and Medals.

Applications for Memorials granted to the next-of-kin of those who died on service or whose subsequent death has been attributed to service, show no diminution, and the correspondence received by the department indicates the extent to which these Memorials are appreciated.

Veterans of previous campaigns are still interested in their service medals as shown by the fact that during the year 19 Fenian Raid and Northwest Rebellion Medals were granted.

Estates

A further attempt has been made by the Estates Branch during the past year to dispose of estates which have been held in abeyance on account of the fact that the heirs could not be located. Every possible clue was followed up, and the enquiries instituted have, in every instance, brought satisfactory results, thus enabling the Department to close the estates.

Arrangements have also been made whereby the department, with the assistance of the Russian Red Cross Society in Moscow, is able to effect distribution of military estates to beneficiaries residing in Russia, which action it was previously impossible to take, owing to the conditions existing in that country.

Some 85 new ledger sheets were opened, for credits received on account of ex-soldiers who have died while receiving treatment through the Department of Pensions and National Health. All of these funds have been distributed except in certain involved cases where the delay has been unavoidable; or where difficulty has been experienced in locating the heirs.

A total disbursement of \$11,533.24 has been made, covering 133 estates. In addition the sum of \$2,704.96 was paid out of the Trust Account, to 20 minor beneficiaries who have attained the age of fifteen years during the fiscal year which has just terminated.

(6) Extracts From Report of the Commandant Royal Military College of Canada for the Year Ending June 18, 1930

Strength

The College opened on August 28, 1929, with a Cadet strength as follows:—

Recruits joined at beginning of term 1929-30.....	63
First Class returned.....	40
Second Class returned.....	45
Third Class returned.....	43
Fourth Class returned.....	9
Strength at beginning of term.....	200

During the year 1 Cadet has died and 6 have been withdrawn for various reasons.

Distribution of Cadets by Provinces—

The distribution of Gentlemen Cadets by provinces at the beginning of the term 1929-30 was:—

Ontario.....	100
Quebec.....	50
British Columbia.....	16
New Brunswick.....	8
Nova Scotia.....	7
Manitoba.....	4
Saskatchewan.....	5
Alberta.....	7
Abroad.....	3

Educational

(a) *Results.*—Of the 40 Gentlemen Cadets in the First Class, 25 obtained Diplomas (including 5 who graduated with honours), 14 will be required to write supplementary examinations, and one has failed.

In the Second Class 22 Gentlemen Cadets have passed, 19 will be required to write supplementary examinations, and two have failed.

In the Third Class 24 Gentlemen Cadets have passed, 12 will be required to write supplementary examinations, and 5 have failed.

In the Fourth Class 30 Gentlemen Cadets have passed, 23 will be required to write supplementary examinations, 15 have failed, and one Gentleman Cadet is still to take his examinations, having been unable to take them at the usual time owing to illness.

(b) *General.*—The general working of the teaching organization has been excellent once more, and the standards aimed at for the year have been reached. All classes have worked well.

Commissions

The following commissions have been applied for by gentlemen cadets:—

Regular Army.....	1
Royal Air Force.....	1
Canadian Permanent Forces—	
Lord Strathcona's Horse (R.C.).....	1
Royal Canadian Engineers.....	3
Royal Canadian Corps of Signals.....	2
Royal Canadian Air Force.....	3

Discipline

Discipline throughout the year has been satisfactory.

Medical

The general health of the gentlemen cadets during the period covered by this report has been excellent.

Accommodation

The preliminary plans for the new Mess and Recreation Block have been drawn up and, if funds permit, it is hoped that it will be possible to commence work on the building during the summer. The necessity of this building becomes more apparent every day and its completion will place the College in a very much better position from the point of view of messing accommodation and library and class-room accommodation.

Riding Establishment

The standard obtained in equitation in the various classes has been up to the average.

Administration

(a) *Messing*.—The standard of messing for gentlemen cadets has been considerably improved during the past year without any increase in cost.

(b) *Kitchen Equipment*.—A few minor additions have been made to the kitchen equipment.

(c) *Clothing*.—One thousand one hundred and five articles of clothing were turned out from the Tailor's Shop during the year.

Grounds and Buildings

(a) *General Repairs to Buildings*.—The buildings have all been kept in a good state of repair. Periodical repairs and painting have been carried out.

(b) *Water Supply*.—The quality of the water after treatment and purification has been very good. The weekly tests made by the Public Health Department have shown the water to be pure and fit for consumption at all times.

(c) *Roads*.—Provision is being made for all roads to be kept in good condition.

(d) *Boundary Fences and Walls*.—These have been maintained in a state of good repair.

(e) *Dormitory Buildings*.—The walls of all rooms in Fort Frederick Dormitory were calcimined.

(f) *Heating Systems*.—The Administration building and the Educational building have been connected for heating purposes; as also have the Gymnasium and the Staff Adjutant's Quarters. For the heating of these buildings, automatic coal burners (iron firemen) have been installed, and these have proved both economical and efficient. A considerable saving in fuel has been effected by this new system of heating.

(g) *Grounds*.—The grounds have been well maintained.

General Staff

(a) In addition to instruction given to gentlemen cadets, the General Staff Branch of the Royal Military College has conducted the following courses, as well as being engaged in the preparation of the precis for, and examination of all papers of the Militia Staff Course:—

- i. Staff College Preparatory Course.
- ii. Refresher Course.
- iii. Long Course.

(b) The General Staff has also prepared the examination papers for promotion to the rank of Colonel in the Non-Permanent Active Militia; and has, from time to time, reviewed the subjects set for Subjects (a) and (c) of promotion examinations for the Permanent Force.

(c) *Staff College Preparatory Course*.—This course commenced on 1st October, 1929, and terminated at the conclusion of the examinations on 6th March, 1930.

Six officers of the Permanent Active Militia and one officer of the Royal Army Service Corps attended the course.

(d) *Refresher Course*.—This course ran concurrently with the Staff College Preparatory Course from October 1 to December 21, 1929.

Four officers of the Royal Canadian Air Force attended.

(e) *Long Course*.—The Long Course commenced on February 24 and terminated at the beginning of June, 1930. One officer of the Permanent Active Militia and three officers of the Non-Permanent Active Militia attended the course.

Competitions with Empire Institutions

(a) *R.M.C., Kingston vs. R.M.C., Sandhurst. Rifle and Revolver*.—The annual rifle and revolver match with the Royal Military College, Sandhurst, was fired on June 13, 1929, and resulted in divided honours. R.M.C., Sandhurst, winning the rifle match, and R.M.C., Kingston, winning the revolver match.

The scores were as follows:—

<i>R.M.C., Kingston</i>		<i>R.M.C., Sandhurst</i>	
Rifle.. . . .	1,013	Rifle.. . . .	1,123
Revolver.. . . .	202	Revolver.. . . .	173

(b) *Lafferty Cup*.—The Lafferty Cup was again won by the R.M.C. of Australia. The R.M.C., Sandhurst, were second; the Royal Air Force Cadet College were third; R.M.C., Kingston, fourth, and the Royal Military Academy, Woolwich, fifth.

Sports

The customary program of sports was carried through during the term.

Transport

The transport of the College has been maintained in serviceable condition. One new truck was purchased during the year and has given complete satisfaction.

Montreal Garrison Military Tournament, 1930

A party of 100 gentlemen cadets took part in the Montreal Garrison Military Tournament on May 14-17, 1930.

Presentations

(a) *Cups*.—The Militia Staff Course of 1929 presented a cup, to be awarded yearly to the gentleman cadet obtaining the highest number of points in the following events:—

- Fifty yards swim.
- Smith bugle events.
- Rifle competition.
- Boxing.

Mrs. G. H. Ralston has offered to present a cup for competition at the Annual Obstacle Race.

Other Prizes.—Colonel W. F. Hadley, O.C., Le Regiment de Hull, has offered a silver cigarette case as an annual prize to be awarded to the gentleman cadet of the First Class who wins the most prizes in his graduating year.

The Staff of the R.M.C., Sandhurst, presented a coloured print (Review of Gentlemen Cadets at Remnantz, Great Marlow, circa 1810). R.M.C., Sandhurst, also presented a coloured print of the Royal Military College, Sandhurst, published December 1, 1813.

The Militia Staff Course of 1929 presented a handsome chesterfield to the Senior Staff Mess.

Visitors

The undermentioned visited the College during the past year:—

Vice Admiral Sir Cyril Fuller, North American West Indies Station.

Sir William Clark, British High Commissioner.

Lieut.-Col. L. Rowley Hill, late Military Attache, British Embassy, Tokio.

Major-General Sir C. C. VanStraubenzee, C.B., C.M.G.

The Headmasters of the following English Public Schools: Harrow, Charterhouse, Christ's Hospital, Dauntsey, Haileybury College, Manchester Grammar School, Mill Hill, Whitgift Grammar School, St. Paul's, Marlborough College, Wrekin College, Ampleforth College, George Watson's College, Bedford, Kingswood, Wellington College.

REPORT OF THE QUARTERMASTER GENERAL

The reports of the several Directorates under the Quartermaster General follow, in the following order:—

- (1) Directorate of Engineer Services.
- (2) Directorate of Supplies and Transport.
- (3) Directorate of Equipment and Ordnance Services.

Directorate of Engineer Services*Definition of Duties*

Engineer Services comprise the design, construction and maintenance of fortifications, military buildings and works; also the custody of lands owned or used by the Department of National Defence. It is also the duty of the Royal Canadian Engineers to operate and maintain the defence electric lights (search-lights) and the telephone systems in permanent fortifications.

Staff

Under the Quartermaster-General, the Director of Engineer Services is responsible for the proper carrying out of all Engineer Services, and administers the sum voted by Parliament under the heading, "Engineer Services and Works, Militia Services," all Engineer Services for the Royal Canadian Air Force, and certain services for the Department of Civil Aviation.

The Director of Engineer Services is assisted by a small staff at Headquarters, who are employed on inspection duties, and the preparation and supervision of important constructional projects, as well as on ordinary administrative duties.

A District Engineer Officer is appointed in each Military District. He is responsible to the District Officer Commanding, for the proper execution of Engineer Services within his district. He has a staff of officers and other ranks of the Royal Canadian Engineers to assist him in the performance of his duties of design, supervision and administration; the size of the staff depending on the amount of work in each district.

Notes on Engineer Services Generally

The condition of military works and buildings generally is good. Owing to the age of many of the buildings, an annually increasing expenditure on maintenance becomes necessary, in order that they may be kept in suitable condition for various classes of occupation.

Rifle Ranges

Existing rifle ranges are being maintained according to their requirements. When sites for several ranges were purchased many years ago, sufficient land was not procured to provide the Danger Area now deemed advisable. Where such areas have become populated or are being used by owners for various purposes, it has been necessary to either close or restrict the use of the range until the areas required are leased or purchased or a new site procured.

During the year, the following construction was carried out:—

- Saskatoon, Sask., (completed).
- North Vancouver, B.C., (completed).
- Sarcee Camp, Alta., (completed).
- Valcartier Camp, (in progress).

Accommodation, Permanent Active Militia

The situation regarding barracks for the Permanent Active Militia is fairly satisfactory. At Calgary, only temporary provision is made in the Armoury, and in Toronto, the retention of Stanley Barracks is at the pleasure of the Corporation of the City of Toronto. Stable accommodation for the various mounted units is fair, but as the artillery is being gradually mechanized, the stabling problem is being relieved. At Calgary better accommodation of a fireproof type is required.

Accommodation, Non-Permanent Active Militia

The provision of accommodation for the Non-Permanent Active Militia is being gradually improved as funds permit. This is being carried out, either by alterations or extensions to existing buildings, or by leasing buildings and suitably fitting them up to meet the requirements of the various units to be accommodated therein.

No new armouries have been erected this year.

EXPENDITURES, 1929-30 (MILITIA SERVICE)

ENGINEER EXPENDITURES CLASSIFIED UNDER VOTES

Engineer Services and Works

(A) Rifle Ranges.....	\$ 147,220
(B) Barracks.....	274,412
(C) Ordnance Buildings.....	37,051
(D) Drill Halls and Armouries.....	144,488
(E) Camps and Lands.....	151,955
(F) Fortifications.....	41,506
Total.....	\$ 796,632

The distribution of expenditures on Engineer Service funds was as follows:—

Military District No. 1.....	\$ 37,130
“ “ 2.....	88,506
“ “ 3.....	46,283
“ “ 4.....	46,868
“ “ 5.....	81,277
“ “ 6.....	13,500
“ “ 7.....	10,300
“ “ 10.....	77,880
“ “ 11.....	64,970
“ “ 12.....	22,468
“ “ 13.....	40,845
Halifax Garrison.....	148,094
Petawawa Camp.....	44,904
Connaught Rifle Range.....	53,196
Ottawa Services.....	20,411
	\$ 796,632

Main Engineer Expenditures from Other Appropriations

MANUFACTURING ESTABLISHMENTS

Dominion Arsenals, Lindsay and Quebec.....	\$ 10,497
--	-----------

NON-PERMANENT ACTIVE MILITIA

Temporary work in connection with camping arrangements, such as water supply, latrines, ablution tables, kitchens, incinerators, preparation of camp sites, etc.....	33,468
--	--------

CONSTRUCTION OF MAGAZINES, HALIFAX

Continuation of program of construction of Joint Service Magazines, Halifax.....	93,667
--	--------

CITADEL WALLS, QUEBEC

Repairs to Quebec gates and walls.....	50,000
--	--------

KINGSTON ORDNANCE DEPOT

Repairs to "A" Block, Ordnance Depot (due to fire damage).....	18,400
--	--------

WORK CARRIED OUT, 1929-30

Work Carried Out, 1929-30

The following is a list of the more important services performed:—

<i>Military District No. 1—</i>		
London—		
Wolsley Barracks—Exterior painting "A" Block.....	\$	1,389
Windsor Armoury—Renewal of main roof.....		4,980
<i>Military District No. 2—</i>		
Toronto—		
Long Branch Rifle Range—Construction of roads and paths.....		1,191
Stanley Barracks—Painting (in parts).....		1,360
Dundas Armoury—New roof covering over Main Hall.....		1,174
Niagara Falls Armoury—Internal painting.....		1,295
Toronto Armoury—Paint underside of roof.....		3,100
“ Improvement of Officers' Mess Room, Royal Grenadiers.....		1,085
“ Lay new floor.....		9,500
Niagara Camp—Provide drainage to R.C.D. and R.C.R. lines.....		1,540
Camp Borden—Prepare building No. 90 for accommodation.....		4,000
“ Recondition building No. 83 for telephone exchange, etc.....		1,975
“ Prepare building No. 91 for accommodation for Signals.....		4,517
“ Alterations and additions heating plants.....		4,950
“ Fitting up building No. 88 for Officers' Mess.....		8,500
<i>Military District No. 3—</i>		
Kingston—		
Barracks—New heating boilers, Officers' Mess and Canteen.....		1,500
Ordnance Depot—Install shelving, etc.....		1,109
Kingston Armoury—New covering on flat roof.....		1,750
“ Pointing stone work.....		2,248
<i>Military District No. 4—</i>		
Montreal		
Pointe-aux-Trembles Rifle Range—Install septic tank.....		1,140
Montreal Armoury—Provide four Target Indoor Rifle Range.....		1,510
“ New roof covering, Main Hall, repairs to.....		2,500
“ Repairs to plaster, painting and plumbing.....		1,000
St. Johns, The Barracks—Painting and repairs to Married Quarters and Officers' Mess.....		2,583
<i>Military District No. 5—</i>		
Quebec—		
Detention accommodation—Provide five cells, also heating.....		1,800
Valcartier Camp—Drilling well and purchasing casing.....		1,000
Dominion Arsenal—Rebuild portion of walls.....		4,872
St. Louis Barracks—Renew portion of roof covering.....		1,000
Citadel—Officers' Mess—Construct new kitchen.....		2,000
“ Reappropriation of Armoury building as quarters for 22nd Regiment.....		5,500
“ Construct forage shed.....		1,000
“ vehicle shed.....		2,500
Quebec Drill Hall—Construct new road.....		4,337
Citadel Hill—Lay new road to Guard Room.....		5,100
<i>Military District No. 6—</i>		
Halifax—		
Charlottetown, P.E.I. Armoury—External painting.....	\$	1,180
Aldershot, N.S. Camp—Repairs to grounds.....		1,247
“ Extend training area.....		1,074
Glacier Barracks—Renew pipe line to hydrants.....		2,475
Churchfield Married Quarters—Renew eaves and roof flashings.....		1,700
Old Fuel Yard—Repairs and renovation.....		1,000
Armouries—Renew H.W. boilers.....		1,610
York Redoubt—Renew skidding shed floor.....		1,500
Camperdown Road Telephone Lines—Replace poles, etc.....		1,000
Bedford Rifle Range—Construction of hut for N.S.P.R.A. Half cost.....		2,997
South Barracks—Install central heating, West Block.....		2,100
Bellevue Annex—Convert into married quarters.....		17,200
Wellington Barracks—Construct boiler room.....		2,156
“ Install h.w. system north end.....		13,450
<i>Military District No. 10—</i>		
Winnipeg—		
Fort Osborne Barracks—Provision of sewer.....		1,029
“ Construction of vehicle shed.....		11,450
“ Construction of forage barn.....		7,500
“ Redecorating quarters, schools and offices.....		2,995
“ Paint barracks in part.....		1,987
“ Reroofing Officers' Mess.....		1,045
“ Construction of Dugout and gas chamber.....		1,725
“ Alterations to Married Quarters, other ranks.....		2,345
“ Extension of 12" main.....		2,395

The following more important services were performed:—

Ottawa—Rockcliffe Aerodrome—	
Preparation of flying field, including clearing, draining, grading and surfacing.....	52,250 00
Addition to garage.....	1,275 00
Open up borrow pit.....	2,750 00
Erect pump house.....	2,110 00
Fire protection, equipment.....	1,055 00
Water supply.....	4,365 00
Install fuel oil supply.....	1,275 00
Additional heating.....	1,958 00
Alterations to kitchen.....	2,000 00
Purchase tractor caterpillar.....	3,800 00
New airmen's quarters, painting, etc.....	4,270 00
Construct guard house.....	4,250 00
New hangar, stucco on walls.....	1,475 00
Install lubricating oil system.....	1,284 00
Install Aqua Gas Fueling system.....	3,585 00
Install boundary lighting system.....	3,654 00
Install intercommunicating telephone and fire alarm.....	3,424 00
Laying tarmac apron and approaches to hangar.....	4,850 00
New airmen's quarters, excavation, concrete and framework.....	4,500 00
Moving musketry buildings.....	10,650 00
Camp Borden—	
Convert building 10M into married quarters.....	4,726 00
Altering building No. 58 and construct new building for sergeants' mess..	9,843 00
Provide Aqua gas filling system with 2 tanks.....	5,307 00
Purchase La France fire engine.....	7,300 00
Install lights, end of hangars and wireless towers.....	1,045 00
Conversion of Buildings 34M, 35M, 36M, to provide married officers' quarters.....	9,450 00
Construct building to provide recreation room.....	6,993 00
Cover married quarters with roofing paper.....	2,684 00
Provide accommodation in Building 67 for Airmen's Mess.....	2,756 00
Provide accommodation in Building 57 for Officers' Mess.....	6,728 00
Provision of electric refrigerators, messes and depot.....	5,701 00
Lac du Bonnet—	
Flooring Bessonneau Hangar.....	1,860 00
Covering exterior hangar.....	1,208 00
Gasoline storage installation.....	1,740 00
Cormorant Lake—	
Flooring Bessonneau Hangar.....	2,500 00
Cover hangar with surfaced roofing.....	1,396 00
Gasoline storage installation.....	1,975 00
Ladder Lake—Gasoline storage installation.....	1,950 00
Berens River—Construct radio station.....	2,774 00
Lac la Ronge—Petrol storage system.....	2,518 00
High River—	
New floor in one hangar.....	1,201 00
Water services.....	3,268 00
Trenton Air Station—	
Diversion of The Creek Crossing, Township road.....	10,959 50
Grubbing and removing standing trees over area.....	9,656 00
Trenching for and laying field tile for underdraining.....	1,974 62
Purchase of field tile.....	8,500 00
Grading aerodrome.....	3,894 00
Township road diversion.....	8,370 00
Surveying, etc.....	3,948 00
Preparation of seaplane station.....	30,864 00
Ditching and excavating to provide access to area north of the C.N.R. and south of the C.P.R.....	4,500 00
Clear land between C.P.R. and C.N.R.....	8,330 00
Clean up and burn brush and slash.....	3,262 50
Purchase of materials.....	62,704 00

Lands

The following is a list of military properties disposed of during the fiscal year 1929-30:—

Rodd Hill, Esquimalt, B.C.—An area of 0.04 acres, with right-of-way for a pipe line sold to Laura Miller Dunsmuir for \$5,000 and cost of connecting the Rodd Hill Water Supply with the city of Victoria water works, by Grant dated September 30, 1929.

Calgary, Alberta, Cemetery Lots.—Blocks 14, 15 and 16, Union Cemetery, conveyed to the city of Calgary, by grant dated November 2, 1929, in exchange for 233 grave spaces to be provided as required in Burnsland Cemetery.

Three Rivers, P.Q., Rifle Range.—Roadway 20 feet wide, 1,100 feet long, conveyed to Communauté des Religieuses Ursulines, by grant dated January 29, 1930, in exchange for an equal area.

Cemetery Plots.—The following cemetery plots were transferred to the Department of Pensions and National Health by Order in Council P.C. 685 dated March 29, 1930: London, Ont., Mount Pleasant Cemetery, 15 lots section X, and St. Peters Cemetery, 4 lots section C.; Guelph, Ont., Guelph Cemetery, plot in block K. and Catholic Cemetery, part lot 8; Ottawa, Ont., Beechwood Cemetery, parts lots 13-15 section 29, and Notre Dame Cemetery, lot 2 in Special block; Montreal, P.Q., Mount Royal Cemetery, 10 plots section G., and Notre Dame de Neiges Cemetery, 2 lots section M.

Montreal South.—About 15.1 acres transferred to the control of the Department of Marine and Fisheries for the use of the Harbour Commissioners of Montreal, by Order in Council P.C. 568 dated March 14, 1930.

The following is a list of Military properties acquired during the fiscal year 1929-30:—

Grand Prairie, Alta.—The SE. $\frac{1}{4}$ section 29, Tp. 71. R. 6, W. 5th M., transferred to the Department of National Defence by the Department of the Interior, by Order in Council P.C. 978 dated June 11, 1929, for an aeroplane landing field.

Rodd Hill, Esquimalt, B.C.—An area of 0.04 acres, with right-of-way for a pipe line transferred to Canada by the War Department, by Indenture dated May 8, 1929.

Three Rivers, P.Q., Rifle Range.—Roadway 20 feet wide by 1,100 feet long conveyed to the Crown by Communauté des Religieuses Ursulines by deed dated January 17, 1930, in exchange for an equal area.

Trenton, Ont., Airport.—Eight hundred and eighty-six acres expropriated October 22, 1929. Of this area 191.38 acres were purchased up to March 31, 1930.

Vancouver, B.C., Rifle Range Site.—Lots purchased from various individuals at a cost of \$1,206.50.

Alderson, Alta.—NW. $\frac{1}{4}$ Sec. 19, Tp. 15, R. 10, W. 4th M. (160 acres) purchased for an amount of \$200.28, December, 1929, for an emergency landing field.

ROYAL CANADIAN ENGINEERS

Duties

The Director of Engineer Services is also the Officer Administering the Corps of Royal Canadian Engineers. The duties of the Royal Canadian Engineers are:—

- (a) To operate the defence electric lights, telephones and machinery of the fortresses of Canada.
- (b) To instruct the Non-Permanent Active Militia and Gentlemen Cadets of the Royal Military College in military engineering.
- (c) To execute and supervise Engineer Services throughout Canada.
- (d) Any other military duties which they may be called upon to perform.

The Officer Administering, Royal Canadian Engineers and District Engineer Officers, in their respective spheres, give advice on technical matters connected with the organization and training of the Engineers of the Active Militia. District Engineer Officers in most cases act as instructors in military engineering at the various Provisional and Camp Schools held for the training and qualification of the personnel of the Active Militia Engineer units.

Officers.

The present Officer strength of the Corps is 31. Of this number, five are "On Command"—one as Assistant Director of Military Intelligence, one at the School of Military Engineering, Chatham, Eng., and three at McGill University.

Other Ranks.

The present strength of Warrant Officers, N.C.O.s. and Sappers is 196, or seven under the authorized limited establishment. This is due to the high qualifications as tradesmen that are now required, and also to there being a great demand for labour in the building and construction trades in civil life.

It is becoming increasingly difficult to find suitable men for training as draughtsmen or military foremen of works. Men of the proper type are not anxious to enlist, since they can earn higher wages in civil employ.

Training

The functions of the Royal Canadian School of Military Engineering are:—

- (a) To provide instruction for officers and other ranks of the Royal Canadian Engineers in their duties, and by examinations, to determine whether they possess the requisite technical qualifications for promotion, or for certain special appointments.
- (b) To qualify W.Os. and N.C.Os. of the Royal Canadian Engineers as Instructors in Military Engineering, for duty with the Instructional Cadre or with the Corps.
- (c) To hold courses for the qualification of officers and N.C.Os., of the Canadian Engineers (N.P.A.M.) and to set and correct examinations for Provisional or Camp Schools of Engineering held in other parts of Canada.

The courses given to R.C.E. personnel at the School are:—

Foreman of Works.

Works Sergeant.

Mechanist Electrician.

Mechanist Machinist.

Mechanist Instrument Repairer.

Engineer Clerks.

Engineer Draughtsman.

Instructor in Military Engineering, Class I and Class II.

Defence Electric Lighting; Engine Drivers, Gas and Oil; Searchlight Operators.

In addition, qualifying courses were held during the year at the School for Officers and N.C.Os. of the Non-Permanent Active Militia (Engineers).

The location of the Royal Canadian School of Military Engineering at Halifax is not satisfactory. The transportation of personnel to the School from other parts of Canada is very costly, and as a consequence the numbers that can attend courses there are limited. It is hoped that funds and accommodation will soon permit of the moving of the School to some central point in Ontario.

No. 6 Detachment at Halifax is the training detachment of the R.C.E. The strength of the R.C.E. at Halifax on March 31, 1930, was 7 officers and 82 other ranks, including the Royal Canadian School of Military Engineering staff and the staff of the District Engineer Officer. In consequence of these small numbers, it is very difficult to carry out training. However, the detachment trained at McNabs Island in field works, bridging, demolitions, camouflage, road building and camping arrangements, as well as drill and small arms training.

Directorate of Supplies and Transport

Under the Quartermaster-General, the Director of Supplies and Transport is charged with the provision, administration and distribution of all food, forage, fuel, light and disinfectants; transport by rail, water and road—horsed and mechanical; remounts and veterinary services; rental of buildings (in conjunction with the Department of Public Works); telephone services; the allotment and appropriation of barracks and barrack services.

Strict economy in all services has been observed, consistent with efficiency and all services are operating at a minimum strength.

The following is a brief outline of the services rendered:—

Supplies for Troops and Horses

(Permanent and Non-Permanent Active Militia)

One thousand nine hundred and twenty-nine contracts for various supplies and services have been made during the past year by the Contracts Branch at the request of this directorate. The following supplies were issued:—

Food rations.....	743,685
Forage rations.....	236,302
Hospital diets.....	23,787

Few complaints were received as to the quality of the food and forage provided by the contractors, and the prices were considered fair and reasonable. Food rations advanced in price 1.4571 cents and forage rations 1.3495 cents as a result of a natural fluctuation in prices.

The following is a comparison of the cost per ration during the last five years:—

<i>Food</i>		<i>Forage</i>	
	¢.		¢.
March 1926.....	33·1045	March 1926.....	36·4509
March 1927.....	33·9849	March 1927.....	36·9480
March 1928.....	34·99565	March 1928.....	40·6513
March 1929.....	38·1799	March 1929.....	40·3220
March 1930.....	39·6370	March 1930.....	41·6715

Lighting and Heating of Buildings

Supplies of fuel and the kinds and quality of coal delivered by the contractors were in accordance with the Department's specifications. Canadian coal is used wherever practicable. Anthracite is used only where municipal regulations or the type of equipment, chimneys, etc., prevent use of bituminous coal. Coke was used where the type of heating apparatus was suitable for its use and compared very favourably with anthracite coal, being very efficient and economical. The supply of light to all buildings has been satisfactory and economical.

Transport by Ocean and Rail

The provision of ocean transport is confined to personnel proceeding to and returning from England, in connection with courses of instruction. All accounts for such ocean transport together with miscellaneous accounts for rail transport, are handled by this directorate.

This directorate is responsible for the control of all rail transport in Canada, the issue of which is kept at a minimum. The railways are continuing to give satisfactory service in connection with the movement of troops to and from annual training camps.

Horse Strength—Permanent Active Militia

On March 31, 1930, the total number of horses in the Permanent Force, including Cavalry, Artillery, Infantry, Army Service Corps, and other units, was 574. Some difficulty is experienced in obtaining remounts of a suitable type for cavalry, artillery and other military purposes. The prices are on the upward trend, particularly in Eastern Canada. The Department of Agriculture maintains seven breeding stations: Roddick Lake, P.Q.; Chaffey's Locks, Ont.; Millarville, Alta.; Ailsa Craig, Ont.; Brampton, Ont.; Russell, Man.; and Kamloops, B.C.

Where such breeding stations are in operation the remounts from these localities are of a noticeably superior type.

Veterinary Service

This branch of the service is responsible for the care and health of horses, and the duties in connection with this service have been very satisfactorily carried out. The strength of the Royal Canadian Army Veterinary Corps has been reduced by one officer.

Telephones

By careful supervision the expenditure for this service has been maintained at the lowest cost. For the year 1929-30, the total cost for this service throughout the various districts was \$17,876.99.

Barrack Services

Included under this heading is the proper conduct of all duties in connection with the receipt, custody, issue and accounting for fuel, light, gas, water, disinfectants and paillasse straw, and also for the allotment of quarters.

The Royal Canadian Army Service Corps

The strength of this Corps on March 31, 1930, was 27 Officers and 239 Other Ranks.

This Corps functions throughout the Dominion for the purpose of providing, administering, issuing and accounting for supplies and forage, fuel, light and disinfectants; transporting troops, animals and stores by rail and water; appropriating, allotting and hiring accommodation for both Permanent and Non-Permanent Active Militia.

The Royal Canadian Army Service Corps (Permanent Force) also takes care of the instruction of the Canadian Army Service Corps (Non-Permanent Active Militia).

To take care of the exigencies of the service, a depot or detachment is located in each Military District, and the officer of the Royal Canadian Army Service Corps, who is designated as the District Supply and Transport Officer, is attached to the District Headquarters.

Training Depots are located at Halifax, N.S.; London, Ont.; Winnipeg, Man.; and Esquimalt, B.C.; and in addition to their normal duties, provide Royal and Provisional Schools of Instruction for the training of Royal Canadian Army Service Corps and Canadian Army Service Corps personnel.

A Royal Canadian Army Service Corps central School of Instruction is maintained at Winnipeg, with branches at the three other Depots. These branch schools are under the direct supervision and control of the main training centre at Winnipeg, for the purpose of ensuring that uniform instruction is maintained.

The majority of the Warrant Officers and senior N.C.O.'s of the Royal Canadian Army Service Corps have qualified at the central school at Winnipeg. The courses of instruction at Winnipeg, are of three months' duration, and deal very extensively with all subjects pertaining to Army Service Corps work in general. Junior Officers, on first appointment, are in the majority of cases, attached to Winnipeg in order to be given instruction in Corps duties.

The Royal Canadian Army Service Corps also furnish personnel for the Royal Canadian Army Service Corps steamers at Halifax, which are used for the purpose of conveying rations, supplies, etc., to the outforts, and are also used for towing targets in connection with Artillery practice.

Training and Instruction

The Royal Canadian Army Service Corps attended combined training at Petawawa and Sarcee Camps last summer with considerable benefit, as the personnel were able to put into practice the training they had secured at the Schools of Instruction.

It is very gratifying to note that the Canadian Army Service Corps (Non-Permanent Active Militia) continues to make rapid strides in training at Camp and local Headquarters. The Corps as a whole has displayed the greatest keenness in its duties, and has reached a very fair standard of efficiency. The esprit de corps is good.

There was considerable development in Mechanical Transport during the past year.

The total number of vehicles belonging to the Department of National Defence (less the Royal Canadian Air Force) was 126, on charge to the different branches as follows:—

R.C.A.S.C.....	102
Surveys.....	4
Ordnance (workshops and store lorries).....	7
Engineers.....	5
Artillery (5 six-wheelers and 1 Reo).....	6
Signals.....	2

During 1929 six-wheelers were introduced into the service.

Several tests of short duration had been made in Ottawa as to the feasibility of this type of vehicle; the tests included the traversing of unbroken ground and the climbing of steep gradients; also extensive tests were made with the overall tracks in mud and soft ground; these tests were considered to be far more severe than would be encountered on active service.

Probably the outstanding test was made during last winter, when a six-wheeler, carrying a 3,000- pound load, fitted with overall-tracks of a design made in the R.C.A.S.C. workshops at Ottawa, made a round trip of approximately 110 miles. It is considered a six-wheeled vehicle can negotiate any average road under winter conditions. Skis, also of the R.C.A.S.C. design, were used on this trip and it is to be noted that some of the roads travelled had snow drifts as high as five and six feet.

During the year the 3rd Medium Battery, R.C.A., was mechanized with six-wheelers and during the present fiscal year additional six-wheelers have been purchased to mechanize "A" and "B" Batteries, R.C.H.A.

The R.C.A.S.C. transport was maintained in a very satisfactory mechanical condition during the year.

Directorate of Equipment and Ordnance Services

1. Provision and distribution of clothing, equipment, arms and ammunition for Militia Services and of clothing and non-technical stores for the Royal Canadian Air Force have been carried out as usual during the year.

2. Equipment

- (a) Sufficient six-wheel motor lorries were purchased to equip A. and B. Batteries, R.C.H.A. These vehicles are available for the training of the Non-Permanent Artillery Units.
- (b) A supply of serviceable part worn rifle parts was obtained from War Office. A saving of approximately \$18,000 was effected.
- (c) Further stocks of parts for the conversion of 1,250 obsolete service arms to .22-inch rifles were purchased. This is in continuation of the policy of using cheaper ammunition for indoor musketry training.
- (d) Additional stocks of training respirators were provided during the year.

3. Dominion Arsenal

The output of the Dominion Arsenal, Quebec, included the following:—

Cartridges, S.A. Ball .303" cordite Mk. VII.....	6,232,570
Cartridges, Q.F. 18-pr. cases empty, Mk. III, brass.....	6,020
Primers percussion Q.F. cartridges, No. 1 Mk. II.....	18,090
Cartridges filled B.L. or B.L.C. 15-pr. 1 lb. 4 oz. blank.....	5,006
Cartridges, S.A. Ball, revolver .455".....	604,950
Chargers .303" cartridge.....	1,039,837
Puffs powder 4 diam. R.F.G. ²	4,054
Shell Q.F. filled H.E. 12-pr. 12 cwt. Mk. VIII.....	1,006

In addition manufacture and repair of ammunition boxes and also repair of other ammunition was carried out.

Considerable repair work was carried out at the plant and some new machinery was installed.

4. Chief Inspector of Ammunition

This branch carried out the inspection and proof of all ammunition manufactured and repaired at the Dominion Arsenal, Quebec, as well as 4,150,000 rounds of cartridge .22-inch purchased from the trade. This branch also supervised the manufacture of, and inspected and proved approximately 35,000 pounds of cordite M.D.T. 5/2 which was manufactured at Bekeil, P.Q., by the Canadian Industries Ltd.

Other special investigations of various natures were carried out in connection with explosives generally.

5. Inspector of Armourers Services

This officer made a complete inspection of the armourers shops in the ordnance depots throughout Canada.

The work of overhauling and repairing rifles, bayonets and scabbards received from overseas after the war was continued through the year in the workshops at Quebec.

This Officer also inspected and reported upon types of sporting rifles imported by various civilian firms throughout Canada.

6. Stocktaking

Weekly reports of stocktaking from all depots show that this important work is progressing favourably.

7. Amendment of Scales and Regulations

The revision and republication of scales of issue of peace equipments in accordance with the new vocabulary of stores was commenced during the year.

Of the 32 scales, 3 are in the hands of the printer, 10 are ready for printing, 9 have been redrafted and several others are being partially drafted by other branches.

Appendices I to XXII of Equipment Regulations, 1926, have been revised in accordance with the new sections and nomenclatures and are in the hands of the printer.

8. Establishment of the Royal Canadian Ordnance Corps

The authorized "Limited Establishment" of the Royal Canadian Ordnance Corps as at 31-3-30 was:—

Officers—36 (excluding seconded officers—4).

Other Ranks—413 (excluding Other Ranks carried supernumerary—4).

During the year the establishment was reduced by 10 Other Ranks.

The actual strength of the Royal Canadian Ordnance Corps as at 31-3-30 was:—

Officers—33 (excluding seconded officers—4).

Other Ranks—409 (excluding Other Ranks carried supernumerary—4).

The distribution of the strength by trades and occupations was:—

Ammunition examiners.....	6
Armament artificers.....	18
Armourers.....	29
Artisans—	
Blacksmiths.....	3
Carpenters.....	12
Painters.....	1
Saddlers.....	7
Tailors.....	4
Textile refitters.....	9
Caretakers.....	70
Clerks and storemen.....	243
Privates and boys under training in the following trades—	
Armourers.....	2
Clerks.....	2
Saddlers.....	2
Textile refitters.....	1
	<hr/>
	409

Discharges, Enlistments, etc.

The following are the particulars of enlistments, transfers and discharges, etc. carried out during the year:—

STRENGTH, DECREASE, RETIREMENTS, DISCHARGES, ETC.

Officers retired.....	4
Other ranks discharged (for ordinary reasons, time expired, etc.).....	24
Transferred to other units.....	4
Promoted to commissioned rank.....	2

STRENGTH INCREASE

Other ranks—enlistments.....	26
------------------------------	----

TRANSFERS BETWEEN STATIONS

Officers.....	9
Other ranks.....	11

Courses of Instruction

Local courses of instruction were carried out as necessary at Ordnance Depots and during the year 22 Other Ranks successfully passed promotion examinations.

Courses of Instruction—Officers

Two Officers of the R.C.O.C. are at present attending the Military College of Science, Woolwich, England, one the "Advanced Class," the other the "Inspecting Ordnance Officers Course."

Long Service and Good Conduct Medal

During the year 14 Other Ranks of the Royal Canadian Ordnance Corps were awarded the above noted medal.

Inspections Carried out by R.C.O.C.

The D.E.O.S. inspected the Ordnance Depots at Kingston, Montreal, Quebec and Saint John during the year with satisfactory results.

The regular yearly inspection of all guns, howitzers, artillery vehicles, range finding apparatus, etc. on charge to N.P.A.M. Units was carried out by Ordnance Mechanical Engineers and all necessary repairs made; also alterations authorized by War Office List of Changes were carried out.

R.C.O.C. Armourers inspected and repaired where necessary all small arms and machine guns.

The clothing and equipment on charge to every unit of the Non-Permanent Active Militia (other than Artillery Units) was inspected, accounts checked and action taken to recover value for all deficiencies found by R.C.O.C. Officers during the year. They were also in attendance whenever a transfer of the command of a unit took place.

All war trophies allotted to various cities and towns were inspected and a report of condition was submitted to Deputy Minister, Public Archives, Ottawa.

Caretakers, Armourers and Drill Halls

Particulars of the number of military and civilian caretakers are as follows:—

Military caretakers.....	70
Civilian caretakers—	
(Chief), Grade III.....	9
(Full-time), Grade II.....	130
(Part-time), Grade I.....	65
	<hr/>
	274

Some recommendations from District Officers Commanding received during the year for extra caretakers could not be approved through lack of funds, but the most urgent cases were provided for. The situation generally can be regarded as satisfactory and is constantly being improved by reallotting caretakers now authorized and making adjustments wherever possible.

REPORT ON CIVIL AVIATION IN CANADA

All phases of civil aviation made great advance during 1929. The Dominion Air Service and Provincial Governments extended their activities in forest fire protection, air photography and transportation. Commercial operators increased the range and variety of their operations. Transportation in the far North has now become an efficient part of the transportation system. Air mail services have been extended over half the continent. The Prairie Provinces are now spanned by night air mails, and daily mail services are operated in Eastern Canada between Windsor and the Maritimes. The Flying Clubs have shown a marked increase in membership and in instructional flying. A large program of construction has been successfully completed at St. Hubert Airport and Airship Base. The Mooring Tower will be in readiness to receive the British Airship R 100 on its initial flight in May. Municipalities throughout the country are giving generous support to the establishment of aerodromes.

Civil Government Air Operations

The Director of Civil Government Air Operations is responsible to the Deputy Minister for the administration and control of all civil air operations required by any department of the Government.

During 1929, the Departments of the Interior, Agriculture, Indian Affairs, Post Office, Mines, Public Works, Railways and Canals and National Defence, availed themselves of aircraft for a variety of purposes.

Units under the control of the Director during 1929, were: (a) Headquarters, Ottawa; (b) Vancouver, B.C.; (c) High River, Alta.; (d) Winnipeg, Man.; (e) Ottawa, Ont.; (f) Dartmouth, N.S.

Forest fire protection operations for the Department of the Interior, Forestry Branch, covered approximately 92,005,466 acres of forest land in Manitoba, Saskatchewan and Alberta.

Eight self-contained photographic detachments were engaged in air photography in various parts of the country, and during the year 97,742 photographs were taken, covering an area of 74,655 square miles.

The total flying time for all units during the year was 12,256 hours and 39 minutes.

High River Air Station

During the year a total of 1,393 hours 5 minutes flying was done. The establishment consisted of 5 officers, 21 airmen. Six D.H. Moth Landplanes were used. The operations comprised fire detection patrols of the Bow River, Crowsnest and Clearwater Forest Reserves, comprising 3,260,826 acres. Temporary landing and refueling facilities for this work are based at Rocky Mountain House and Pincher Creek.

An experimental service for the protection of a large area of forest land in the Peace River District, was again operated from a base located at Grand Prairie. In conjunction with the Royal Canadian Corps of Signals, reliable voice communication is maintained from aircraft in flight, up to a distance of 200 miles. During the season 4 fires were observed in the Bow River area, and 39 in the Peace River District.

Winnipeg Air Station.

The work of this Station was increased considerably during 1929. Additional aircraft was provided and bases were improved.

The total flying time for the year was 5,684 hours 32 minutes.

The establishment consisted of 22 officers and 111 airmen. Thirty-seven aircraft were used.

The organization of this Station was: Headquarters at Winnipeg, with the following sub-bases: Lac du Bonnet, Norway House, Cormorant Lake, Ladder Lake, Lac la Ronge, Winnipegosis, Berens River, Thicket Portage, and detachments as follows: No. 1 General Purpose, Dusting Flight and Transportation Flight. All bases were equipped with radio and pigeon services, providing a means of communication between the units and Headquarters at Winnipeg.

Flights were made for the following purposes: Fire protection patrols, suppression action on fires located, air photography and transportation.

The total forest area under protection was approximately 57,124,994 acres. During the season 325 fires were detected and suppression action taken as required.

Ottawa Air Station

The base of Ottawa Air Station was moved from Shirley's Bay to the new aerodrome at Rockcliffe. During the year the total flying time was 1,772 hours 6 minutes.

The establishment consisted of 14 officers and 54 airmen. Seventeen aircraft were used. The operations comprised air photography, instruction, transportation and training, tests and experimental flights, forest dusting operations in the vicinity of West Tree, Ont., and Manicougan, P.Q., air routes and air mail investigation between Halifax, Montreal and Ottawa.

Air Photography

No. 1 Photographic Detachment.—Vertical and oblique photography in British Columbia. Two Fairchild FC. 2. W. aircraft were operated. The total flying time was 450 hours 20 minutes.

No. 2 Photographic Detachment.—Vertical and oblique photography in Manitoba and Ontario. Two Fairchild FC. 2. aircraft were operated. The total flying time was 552 hours 37 minutes.

No. 3 Photographic Detachment.—Vertical and oblique photography in western Ontario, Saskatchewan, and Manitoba. Two Vedette flying boats were operated. The total flying time was 371 hours 50 minutes.

No. 4 Photographic Detachment.—Vertical and oblique photography in northern Saskatchewan and Ontario. Two Vedette flying boats were operated. The total flying time was 416 hours 5 minutes.

No. 5 Photographic Detachment.—Vertical and oblique photography in western Ontario, northern Manitoba, and northern Saskatchewan. Two Vedette flying boats were operated. The total flying time was 280 hours 45 minutes.

No. 6 Photographic Detachment.—Vertical and oblique photography in eastern Ontario and Quebec. Two Fairchild FC.2.W. aircraft were operated. The total flying time was 676 hours 33 minutes.

No. 7 Photographic Detachment.—Vertical and oblique photography in eastern Ontario and Quebec. Two Fairchild FC.2.W. aircraft were operated. The total flying time was 356 hours 41 minutes.

No. 8 Photographic Detachment.—Vertical and oblique photography in the Maritime Provinces and eastern Ontario. Two Fairchild FC.2. aircraft were operated. The total flying time was 302 hours 15 minutes.

Civil Aviation Division

The Controller of Civil Aviation is responsible to the Deputy Minister of National Defence for the administration of air regulations, and the control of commercial and private flying in Canada; the location and equipment of airways, construction of airship bases and the oversight of flying clubs. The branch has three divisions: Air Regulations, Airways, and Information.

Statistics

There were in Canada 85 commercial aircraft operators; 445 licensed civil aircraft; 445 licensed commercial air pilots; 370 private air pilots; 308 licensed air engineers; and 71 licensed aerodromes.

Comparative figures showing flying activities are given below for 1928 and 1929, which include the Ontario Provincial Air Service, whose pilots flew approximately 669,423 miles, and the Light Aeroplane Clubs, whose pilots flew approximately 1,300,000 miles; in fact all flying done in Canada except that of the Air Services of the Department of National Defence and privately owned aircraft.

	1928	1929
Number of Flights.....	75,285	144,143
“ Hours.....	43,071	79,786
“ Passengers.....	74,669	124,751
“ Passenger Miles.....	2,883,782	6,114,997
Pounds of Freight.....	2,404,682	3,903,908
“ Mail.....	316,631	430,636

Commercial flying comprised the following:—

- (a) Transport Services.—Scheduled mail, passenger, freight and express routes.
- (b) Commercial Services.—Including flying instruction, air photography, timber cruising, forest and fishery patrols, passenger and express service, “taxi,” sightseeing tours, exhibition flying, etc.
- (c) Mining Companies.—Mining, exploration and prospecting.
- (d) Ontario Provincial Air Service.—Forest fire protection, timber cruising, air photography and transportation.
- (e) Light Aeroplane Clubs.—Instruction and exhibition flying.

The greatest amount of flying was done in Canada by the fixed-base and itinerant operator, comprising flying instruction, air photography, timber cruising, forest and fishery patrols, passenger and express services, “taxi” and sightseeing tours, exhibition flying, etc. Seventy-three operators were engaged, of which 16 conducted schools of flying. Five hundred and sixty pupils received flying instruction and nearly 3,500,000 miles were flown.

Four mining companies employed aircraft as an aid to exploration and prospecting in various parts of Canada; their pilots flew a distance of 527,908 miles, as far north as Herschel Island and Coronation Gulf.

Commercial Companies

In New Brunswick, Nova Scotia and Prince Edward Island, two firms operated in passenger and mail carrying and flying instruction.

In Quebec twenty-one firms were engaged in aviation, their activities comprising mail, express and passenger carrying, instruction, exhibition flying, air photography, forest reconnaissance and protection, etc.

In Ontario thirty-three firms were engaged in aviation. A large amount of flying was done covering mail, express and passenger carrying, aerial photography, exhibition flying, instruction, etc.

In Manitoba, Saskatchewan and Alberta, twenty-one companies operated aircraft in passenger, mail and freight transportation, instruction and exhibition flying, air photography, etc.

In British Columbia, six companies have done a large amount of flying, including transportation of passengers and freight, forestry patrols, flying instruction, air photography, etc.

In the Yukon and Northwest Territories, two companies were engaged in passenger, freight and mail carrying, reconnaissance and flying instruction.

Provincial Operations

In British Columbia the Forestry Branch of the British Columbia Department of Lands awarded a contract to Western Canada Airways Limited, for forest dusting operations over an area of forty acres of forest land at Indian River, attacked by the Hemlock Looper Larvae. Also a contract to Dominion Airways Limited, for forest protection patrols and sketching in the Kootenay and Arrow Lakes region, covering an area of about 3,500 square miles.

In Ontario, the Provincial Government maintains its own Air Service as part of the Forestry Branch of the Department of Lands and Forests. This Service owns and operates twenty-five aircraft. Its main base is at Sault Ste. Marie, where a large and completely equipped hangar has been erected, complete with workshops and store-rooms. The flying operations are mainly in the district lying north and west of the Ottawa river, lake Nipissing and French river. Forest fire detection and suppression patrols, forest mapping by photography, sketching for inventory work, and transportation to the outlying parts of this district, have been carried out. The main operating bases are at Sudbury, Orient Bay and Sioux Lookout, and subsidiary bases are maintained during the operating season as required. The total flying time for the year was 11,602 hours.

In Quebec, the Provincial Forest Service carry out similar work by contract with commercial aviation firms. Their fire patrol system is not on the same scale as in Ontario, but a large amount of forest type mapping has been done. Contracts were let to the Compagnie Aerienne Franco Canadienne for vertical photography in the province, covering an area of 7,100 square miles. Aerial photography was carried out under contract by Canadian Airways Limited, covering an area of some 700 square miles.

Air Mail

During 1929, sixteen regular air mail routes were operated under Post Office contracts with commercial firms. During the year 430,636 pounds of mail was conveyed. The total length of air mail routes was 5,139 miles. 2,162 single trips were completed out of 2,344 scheduled. The approximate total distance flown by mail contractors was 490,640 miles.

The following services have been provided by the Post Office Department under contracts. Summer Services: Rimouski-Montreal; Montreal-Ottawa; Lac du Bonnet-Bissett-Wadhope. Winter Services: Leamington-Pelee Islands; Quebec-Seven Islands; Seven Islands-Anticosti; Moncton-Magdalen Islands; Moncton-Charlottetown. Yearly Services: Montreal-Detroit; Montreal-Albany; Kissinging-Cranberry Portage; Sioux Lookout-Gold Pines-Red Lake-Narrow Lake-Jackson Manion; Toronto-Buffalo; Calgary-Regina; Regina-Winnipeg; Regina-Edmonton; Fort McMurray-Aklavik; Oskalanee-Chibougamau.

In addition to the regular mail contracts, an experimental service is being operated under contract between Montreal and Saint John.

A special service, authorized under special arrangement by the Post Office, is being operated between Whitehorse and Dawson, Yukon Territory.

The following sections have been developed for night flying.—*Winnipeg-Calgary*: Twenty-one intermediate aerodromes were selected and fifteen 24" Electric Rotating Beacons of two million candle power, with 14" course lights,

have been installed. Also 48 Acetylene Air Beacons of 7,000 candle power, installed at 10 mile intervals. Radio Beacon Stations have been established at suitable intervals.

Hamilton-Windsor: Six 24" Electric Rotating Beacons and eleven Acetylene Air Beacons, have been installed over the Montreal-Detroit route.

The following sections have been surveyed (a) following Canadian National Railway from Edmonton to Vancouver; (b) following Canadian Pacific Railway from Calgary to Vancouver; (c) following Canadian Pacific Railway from Lethbridge to Vancouver; (d) through Northern Ontario connecting Winnipeg with Montreal and Toronto.

The object of these surveys is to select the most feasible route for the completion of the Trans-Canada Air Mail Services.

St. Hubert Airport and Airship Base

The construction of an airship base and aerodrome at St. Hubert follows the decision of the Dominion to participate in Empire Air Communications. Construction has been proceeding on the airship base for the reception of the British Airship R 100, which is expected to make its first Trans-Atlantic passage in May, 1930. A mooring tower has been erected and equipped with the most efficient machinery in the world. A triangular site containing 792 arpents, was purchased in 1928, adjacent to St. Hubert Station, some seven miles east of Montreal on the Chambly Highway.

During 1929 the tower and base housing were completed and three electrical mooring winches erected and tested. A silicol process hydrogen plant consisting of two units generating a minimum of 20,000 cubic feet per hour, and a reserve gas holder with a capacity of 50,000 cubic feet was erected. The Pumping Station and Filtration plant, etc., were completed. The Radio Station was completely installed and is in working order. No. 2 hangar 200' x 125' was erected. Two hard-surfaced runways and large section of the taxiway were built. The administration building to house the aerodrome control staff, wireless and meteorological services, Post Office, Customs Department Staff and Passengers' waiting room were completed. A contract for night lighting was awarded and progress made on the erection of beacons, etc.

A number of commercial aircraft operating companies use St. Hubert for passenger, freight and mail services. A school of flying is conducted and the Montreal Light Aeroplane Club have rented space for their operations. It is the terminal for the International Air Services between New York and Montreal. Landing fees, storage charges and terms on which land may be leased to commercial operators have been drawn up.

Light Aeroplane Clubs.

To stimulate interest in flying, to promote the knowledge and use of aviation among the rising generation, and to encourage the provision of flying fields, the Dominion Government has lent assistance in the formation of light aeroplane clubs in the chief centres of population. Two light aeroplanes, complete with engines are issued to each club approved by the Honourable the Minister of National Defence. Each club receives a grant of \$100 for each ab initio pupil trained by the club. Each club must provide its own flying field, arrange for the services of an instructor and air engineer and have at least thirty members ready to qualify as pilots, and have not less than ten members already qualified. During 1929, 23 clubs were active. These clubs have a total membership of 5,233. During the year a total of 16,613 hours were flown and a total of 49,708 flights were made. 183 Private and 58 Commercial licences were obtained by members.

Aeronautical Engineering Division

The Aeronautical Engineering Division under the Deputy Minister of National Defence acts in a consultant capacity in regard to all technical matters for the Military Air Service, the Civil Government Air Operations Branch, and through the Controller of Civil Aviation for civil aviation. The classification, compilation and dissemination of technical material to all branches of aeronautical industry in Canada forms one of the duties of the Division.

The work is organized under the following sections: Research, Airworthiness and Inspection. Owing to the rapid growth of the industry in recent years, each of these sections has been overtaxed, and at the present time is undergoing further expansion in both staff and equipment.

One of the most outstanding items of interest of the year is the expansion of the activities of the National Research Council to include the establishment of a section devoted exclusively to Aeronautic Research. The primary equipment which is now in the process of design and construction is a Wind Tunnel (9 feet diameter), an engine test bed (capacity 1 to 1,000 horsepower) and a water channel (400 feet in length) for testing seaplane floats and hulls. The Research Council has been very fortunate in obtaining the services of such distinguished authorities as Prof. J. H. Parkin, University of Toronto, Dr. Boyle, etc.

It can easily be conceived that with this addition to the aeronautical research facilities of the country, Canadian manufacturers and operators of aircraft and engines will benefit to a considerable extent. Tests which were formerly carried out on behalf of the National Research Council under the direction of Prof. J. H. Parkin, will now be done under the same direction at the National Research Council's own laboratories in Ottawa.

Research

In the past year there has been a great deal of experimentation done on new aircraft of Canadian, British and American manufacture. This work was requested by the Air Services in order to determine suitable types for various operations. To do this the R.C.A.F. test flight establishment had to be augmented, and a detailed program of work regarding type tests for comparison was prepared.

The new types which have been investigated during the current year are as follows:—

<i>Name of Aircraft</i>	<i>Proposed Duty</i>
Vickers Vancouver	Forest suppression and Freight carrier.
Ford Trimotor (Float and Ski equipped)	Forest dusting and transport.
Vickers Vedette Mk. V. (Wright J.6 300 H.P. engine)	Photographic and transport.
Curtiss-Reid Rambler	Light aeroplane training.
Avro Avian	Light aeroplane training.
Vickers Vigil	Forest patrol.

In addition to supervising the practical testing of these aircraft, this division has made recommendations which arose from the department's experiences, to various manufacturers to improve their product and facilitate its adaptability to specific operations.

During the past summer a great deal of experimental work was done in connection with the development of more efficient floats for aircraft.

At the same time a great deal of work was carried out in developing a water rudder and drogues to improve the controllability of seaplanes when on the water. It may also be mentioned that a combination ski float gear was put through its water tests. A good deal of development work has been done on geared engines, also on steel propellers of the adjustable type.

During the year several aircraft manufacturers have submitted their aircraft or plans of their aircraft to the Department for examination and test, with a view to satisfying the specified requirements for certain operations.

The problem of combination ski wheel and ski float gear is still in the development stage, but from the work carried out this year it is thought that satisfactory combination devices will soon be available.

The difficulties of winter flying has taken a great deal of this section's attention in matters such as effective engine cowlings, carburettion, method of starting engines when cold, and efficient skis. Some work has also been done in developing a wind indicator, which may be thrown from the aircraft by the pilot to locate the direction of the wind where no other method of indication exists.

Airworthiness.

In connection with the issuance of type certificates, the airworthiness section carries out detail calculations to establish the structural strength of all aircraft and components built in Canada. It is in close co-operation with both the United States and the English authorities regarding domestic requirements and the methods of stress analysis. The Airworthiness Section maintains at the same time the requirements laid down by the International Commission for Air Navigation for all aircraft built in Canada for export.

During the year the method of analyzing the loads obtained in characteristic attitudes of flight has been revised; the extent of investigations has been increased to include detail balance and performance calculations, also the stressing and performance of airscrews.

From time to time descriptive detail pertaining to the method of aircraft stress analysis and aerodynamic balance calculation has been compiled by this section and promulgated to the industry.

Due to the rapid growth of the aircraft industry in Canada, the work of this section increases yearly, and although during the year there has been an increase in the staff, still further increase is now being contemplated.

Inspection.

This section of the branch carries out the actual detail examination of the aircraft and component parts during construction.

The purpose of the inspection is to insure the highest standard of workmanship and also the specified quality of materials prior to the granting of certificates.

It has not been the policy of the department to carry out detailed inspection of aircraft under construction, *except in the case of new aircraft* manufacturing companies, but the inspection has been limited to periodical inspection during the course of manufacture, relying upon the inspection carried out by the manufacturing companies themselves for all detailed inspection.

Aircraft Inspection Detachments are now stationed at Montreal, Ottawa, Toronto and Winnipeg, and provision is being made for the establishment of another detachment in Vancouver.

During the past year this section has done a considerable amount of work in connection with reports on crashed aeroplanes, and in many cases has been able to determine the weaker parts of the structure and advise certain modifications.

At the present time aircraft manufacturers are introducing new materials in the construction of aircraft, "Stainless steel" being one of the most important. Any such departures from regular practice necessitates much more thorough inspection during construction and more frequent inspections later on to determine the durability of the materials.

In the inspection records which accumulate from year to year, there is a great deal of valuable data pertaining to the deterioration, etc., of various aircraft materials. At some future date it is intended to use this information in the preparation of a treatise on the deleterious effect of Canadian conditions on aircraft materials and the general deterioration of aircraft.

REPORT OF THE FINANCIAL SUPERINTENDENT (1929-30)

The expenditure and revenue statements included in this report relate only to Militia and Air Services. Naval expenditure and revenue statements will be found in the report of the Naval Service.

Following are tables of expenditure and revenue for the fiscal years 1928-29 and 1929-30. Expenditures on account of Civil Government Salaries and Contingencies are not included in these tables but are shown in statement No. 3, Appendix "A."

Expenditure—Militia, Air and General Services

Year	Militia Votes	Air votes	General Votes	Adjustment of War Claims	Imperial War Graves	Battle-fields Memorials	Total
1928-29.....	11,045,827	5,040,505	239,950	112,492	573,698	160,873	17,173,345
1929-30.....	11,163,170	5,920,670	236,693	88,607	573,794	168,967	18,151,901
Decrease.....			3,257	23,885			
Increase.....	117,343	880,165			96	8,094	978,556

Credits—Revenue—Militia, Air and General Services

Year	Militia Services	Air Services	N.W.T. Radio Services	Demobilization Previous Years	Total
1928-29.....	\$ 216,333	\$ 34,888	\$ 35,225	\$ 730,080	\$ 1,016,526
1929-30.....	219,452	89,999	39,250	476	349,177
Decrease.....				729,604	667,349
Increase.....	3,119	55,111	4,025		

The following statements of expenditure and revenue will be found in Appendix "A":—

1. Appropriation Accounts, 1929-30.
2. Revenue, 1929-30.
3. Comparative statement of Expenditure and Revenue for ten years 1920-21 to 1929-30.
4. Expenditure on account of Adjustment of War Claims, 1929-30.

The increase in expenditure over the previous year was due mainly to the following:—

Militia Votes—

- (a) The carrying out of necessary repairs to the Ordnance Depot at Kingston, which was damaged by fire in August, 1929;
- (b) The partial replacement of Militia clothing which was destroyed by fire while stored in the Ordnance Depot, Kingston;
- (c) Repairing Quebec Gates and Walls.

Air Votes—

- (a) Extension and intensification of aerial forestry operations in Manitoba, Saskatchewan and Alberta;
- (b) Increased operations in connection with aerial photographic surveys, etc., for other Government Departments;

- (c) Providing wireless equipment and ground services, route lighting equipment, etc., for air mail routes;
- (d) Construction of aerodrome and airship base at St. Hubert, P.Q.
- (e) Commencement of construction of new combined land and seaplane training station at Trenton, Ont.

The large decrease in revenue under the heading Demobilization, Previous Years, is explained by the fact that settlement with the Imperial Government was effected in 1928-29 of certain outstanding claims for war expenditures. There were no accounts of this nature to be recovered in 1929-30.

The allotment system of controlling expenditure, which has been successfully employed for several years in connection with Militia Training and Cadet Services, was applied to the Permanent Force Vote during the year under review, resulting in a much more effective control of expenditure.

The analysis of expenditure and costing system in connection with radio services performed by the Royal Canadian Corps of Signals were continued with satisfactory results.

REPORT OF THE ASSISTANT DEPUTY MINISTER

Submitted herewith are reports relating to (1) Civilian Staff, (2) Printing and Stationery, and (3) Central Correspondence Registry.

(1) Civilian Staff

During the fiscal year some minor changes in organization and classification have been carried out by the Civil Service Commission at the request of the Department.

The Comparative Table given below shows the number of civilian employees (Permanent and Temporary) in the Department of National Defence at Ottawa and elsewhere, and the amounts paid in salaries, on April 1st, 1929, and April 1st, 1930.

This statement shows increases in the number of permanent employees amounting to 30 at Ottawa and 31 outside Ottawa. The increase at Ottawa is principally due to the permanent appointment, in the Air Service Branch, of temporary employees whose duties, permanent in nature, have become necessary owing to the rapid expansion of this branch of the service. It will be noted that there was a decrease of 23 in the number of temporary employees.

The increase outside of Ottawa is also due in part to the permanent appointment of temporary employees in the Air Service Branch. In the Military Districts there have been a number of permanent appointments of temporary employees who have for some years been performing duties of a permanent nature and whose appointment on a permanent basis was in the public interest.

	No. of Employees		Amount of Salaries	
	April 1, 1929	April 1, 1930	April 1, 1929	April 1, 1930
			\$	\$
<i>At Ottawa—</i>				
Permanent.....	389	419	57,451 47	61,474 76
Temporary.....	92	69	9,512 34	6,903 23
<i>Outside Ottawa—</i>				
Permanent.....	290	321	38,103 51	41,775 05
Temporary.....	439	439	35,710 92	35,077 90
	1,210	1,248	140,778 24	145,230 94

These figures do not include 292 factory employees at the Dominion Arsenal, Quebec, nor 144 workmen employed at the Naval Dockyards, Halifax and Esquimalt.

(2) Printing and Stationery

- Decrease.

REPORT OF THE JUDGE ADVOCATE-GENERAL

Courts-Martial

During the fiscal year ending March 31, 1930, 50 district courts-martial were convened and held, this being a decrease of 7 compared with the number of such courts held in the preceding year; 47 of these courts-martial were for the trial of military personnel and 3 for the trial of personnel of the Royal Canadian Air Force.

It is evident, from a review of the proceedings of courts-martial held during the last fiscal year, that considerable improvement is taking place in the knowledge of military law and court-martial procedure of officers performing court-martial duty, and this was reflected in the comparatively small number of observations it was necessary for the reviewing officer to make. Such errors and irregularities as did occur were not of a particularly serious nature and in no case did they invalidate the finding. In only one instance was it necessary for the Judge Advocate-General to advise that the finding and sentence of a court-martial, which had been confirmed, should be quashed.

Legislation

During the year under review the only legislation drafted by the Judge Advocate-General was a small Bill making certain amendments to the Militia Pension Act so as to remove an anomalous situation respecting the provision of pension for the widow of an officer who dies in the service, when such officer comes within that class of officers to which subsection (2) of section 4 of the Militia Pension Act relates.

Investigations, Courts of Inquiry, Committees, etc.

The Judge Advocate-General carried out several investigations of an important nature and was also in attendance at a number of Courts of Inquiry. In addition, his duties as Chairman of the respective Orders Committee of the three services encroached, to a considerable extent, upon the time available for the routine duties of his office.

Instruction in Military Law

During the year under review, a course of instruction in military law for officers of the Permanent Force was organized and carried out. The preparation of the various sets of questions, precis and comments, together with the marking of completed papers, was all done in the office of the Judge Advocate-General, the course itself being administered by the General Staff, which branch has requested that a similar form of instruction be carried out during the coming year.

General

The volume of references and requests for opinions was in excess of the preceding year and the number of daily interviews showed a decided increase.

The expansion of the Air Mail Service, necessitating the acquisition of beacon sites and intermediate landing fields, resulted in a considerable increase in the work of the office, due to the numerous contracts and agreements which were required, many of them being of a novel type for which no precedents existed.

The development of new ideas in the field of aeronautics very frequently necessitated a revision of contracts for the construction of aircraft whilst such construction was in progress, so as to enable the department to obtain the full advantage of such development. This necessitated extreme care being taken so as to ensure that while the department was being fully protected, the several manufacturers were not subjected to conditions impossible of fulfilment.

During the year there were made by the Governor General in Council two references pertaining to the regulation of aerial navigation, and the liability of a province to reimburse His Majesty, in the right of the Dominion, for expenditure occasioned through the furnishing of troops in aid of the civil power upon a requisition from the Attorney-General of the province concerned. With respect to both these references, considerable data and preliminary information was requested of, and furnished by, the Judge Advocate-General.

Due to the increase in the volume of work which the office is required to perform, a departmental solicitor was appointed by the Civil Service Commission, this being a civilian appointment. The departmental solicitor assists the Judge Advocate-General and acts for him in his absence.

REPORT OF THE DIRECTOR OF CONTRACTS

The volume of work performed in the branch during the fiscal year ending March 31, 1930, was greater than in previous years. The different requirements of the three services, Naval, Militia, and Air, made necessary the purchase of an almost inconceivable variety of Stores of which the following is a partial list—

Uniform and other clothing of different patterns.
 Cloths, serges, frieze, flannel, drill, canvas, etc., required for the manufacture of clothing.
 Boots, shoes, overshoes, and rubbers.
 Furniture.
 Electrical equipment.
 Guns and gun carriages.
 Automobiles, trucks and other military vehicles.
 Aircraft, aero engines, and other necessary flying equipment.
 Ammunition.
 Paints, varnishes, and oils.
 Telegraph and wireless apparatus.
 Armament and torpedo stores.
 Provisions, fuel and forage.
 Medical and dental supplies.

In addition to the purchase of the foregoing supplies, contracts were also made for the construction of buildings, the converting and reconditioning of aircraft, the overhaul of aircraft engines, snow cleaning, chimney sweeping, scavenging, laundry, and cartage, and for various other services necessary for the Permanent and Non-Permanent Forces at different points throughout the country. Supplies were also purchased during the year for the use of the Imperial Navy at Bermuda Dockyard.

The practice is to invite competitive tenders before awarding contracts, thus enabling the Department to secure the Stores or Services required at the most favourable prices.

It is the policy, wherever possible, to purchase goods of Canadian manufacture and where this is not possible, to give the preference to supplies manufactured within the Empire.

The following statement will, to some extent, show the volume of work performed in the branch during the year:—

Requisitions received.....	3,714
Contracts placed.....	4,361
Customs entries passed.....	766
Requisitions placed on Public Works Department for office furniture, alterations to offices, etc.....	618
Requisitions checked, covering purchases and services for which orders were placed by duly authorized officers, at Ottawa, and outside points, and not by the Contracts Branch.....	8,787
Cases and packages handled at the branch inspection room.....	44,963

The approximate value of the contracts awarded was \$4,400,000.

During the year, under review, the department purchased 89 aircraft of different types, complete with Engines, and 23 aircraft, without engines, for training, photography, forestry patrol and other purposes. Orders were also placed for 27 Aero engines of different manufacture.

Almost all the stores purchased were either in accordance with departmental specifications, sealed patterns or submitted samples. The stores delivered at Ottawa were subjected to the most careful inspection by the departmental inspectors and any which did not conform to the specifications or patterns were rejected.

Provisions, fuel, stores, etc., ordered for delivery at different points throughout the country were inspected under the supervision and direction of the Officer Commanding the Military District, the Dockyard Naval Store Officer, or the Officer Commanding the Air Station concerned.

APPENDIX "A"

The following are statements showing:—

- (1) Appropriation Accounts, 1929-30.
- (2) Revenue, 1929-30.
- (3) Comparative Statement of Expenditure and Revenue for ten years 1920-21 to 1929-30.
- (4) Expenditure on account of Adjustment of War Claims, 1929-30.

DOMINION OF CANADA

REPORT

OF

THE DEPARTMENT OF NATIONAL DEFENCE
(NAVAL SERVICE)

FOR THE

FISCAL YEAR ENDED MARCH 31

1930

200—8-30 (4104)
N.S. 65-1-20

OTTAWA
F. A. ACLAND
PRINTER TO THE KING'S MOST EXCELLENT MAJESTY
1930

THE DEPARTMENT OF NATURAL RESOURCES

MINISTER OF THE CROWN

THE DEPARTMENT OF NATURAL RESOURCES

OFFICE OF THE MINISTER

OTTAWA

1911

1911

OTTAWA, July 1, 1930.

*To His Excellency the Right Honourable Viscount Willingdon, G.C.S.I.,
G.C.M.G., G.C.I.E., G.B.E., Governor-General and Commander in
Chief of the Dominion of Canada.*

MAY IT PLEASE YOUR EXCELLENCY:

I have the honour to submit, herewith, for the information of Your Excellency and the Parliament of Canada, the Eighth Annual Report of the Department of National Defence (Naval Service), for the fiscal year ended March 31, 1930.

I have the honour to be,

Your Excellency's most obedient servant,

J. L. RALSTON,
Minister of National Defence.

OTTAWA, July 1, 1930.

The Honourable
The Minister of National Defence,
Ottawa.

SIR,—I have the honour to enclose, herewith, Annual Report of the Department of National Defence (Naval Service) for the fiscal year ended March 31, 1930.

I have the honour to be, sir,

Your obedient servant,

G. J. DESBARATS,
Deputy Minister.

REPORT
OF THE
DEPARTMENT OF NATIONAL DEFENCE
(NAVAL SERVICE)

FOR THE FISCAL YEAR ENDED MARCH 31, 1930

OTTAWA, June 30, 1930.

G. J. DESBARATS, C.M.G., M.E.I.C.,
Deputy Minister, Department of National Defence,
Ottawa.

SIR,—I have the honour to submit the following report on the Naval Service of Canada for the fiscal year ended March 31, 1930, under the following headings:—

1. Personnel
2. H.M.C. Ships
3. R.C.N. Barracks
4. H.M.C. Dockyards
5. Naval Intelligence
6. Naval Stores
7. Financial Statement
8. General

1. PERSONNEL

ROYAL CANADIAN NAVY

At the beginning of the fiscal year under review the authorized complement was 710 officers and ratings.

During the year it became necessary to increase this complement to provide partly trained crews for the new destroyers *Saguenay*, and *Skeena*, under construction, and larger instructional staffs for training the increased number of ratings of the Royal Canadian Navy and personnel of the Reserve forces.

The authorized complement was increased to 104 officers and 792 ratings. In order to provide adequate training for the newly entered ratings, they have been entered in classes of limited numbers and the total complement will not be recruited until the new ships are commissioned, in the spring of 1931.

At the close of the fiscal year the personnel serving comprised 83 officers and 709 ratings.

Officers.—Of the eighty-three officers serving, only nine are on loan from the Royal Navy. Of this number, four are Commissioned Officers and five are Warrant Officers. One Commander, Royal Navy, is serving at Headquarters in charge of the Canadian Division of the Admiralty World-wide Intelligence System; one Paymaster Commander, R.N., occupies the position of Naval Secretary at Headquarters; one Paymaster Lieutenant Commander, R.N., is Accountant Officer at R.C.N. Barracks, Esquimalt; and one Lieutenant (E.), R.N., has been appointed to the Engineering Department at Halifax temporarily, to meet a shortage in Engineer Officers caused by the necessity for appointing an Engineer Officer to new construction in England, and by the

death of Engineer Commander George P. Clarke, R.C.N. The remaining five R.N. Officers are all Commissioned Officers from Warrant rank or Warrant Officers employed on gunnery and torpedo duties. There are no Canadian ratings of sufficient seniority for advancement to Warrant rank, at present, to fill these positions.

So far as possible, therefore, the Royal Canadian Navy is officered by Canadians, most of whom are graduates of the Royal Naval College of Canada. The following table gives the number of Canadian officers in each rank:—

Commodore.....	1
Commander.....	6
Lieutenant Commander.....	27
Lieutenant.....	9
Sub-Lieutenant.....	2
Midshipman.....	2
Cadet.....	3
Engineer-Commander.....	4
Lieutenant (E).....	6
Paymaster Lieutenant-Commander.....	1
Paymaster Lieutenant.....	2
Shipwright Lieutenant.....	1
Warrant Shipwright.....	1
Commissioned Gunner.....	2
Gunner.....	3
Warrant Writer.....	2
Warrant Victualling Officer.....	2
Total.....	74

It may be noted that there is an undue proportion of Lieutenant-Commanders. This is a direct result of demobilization between 1918 and 1920, and of the reorganization period which followed. The extensive war activities were discontinued and the Royal Canadian Navy was reduced to a small peace complement shortly after the close of the war. Only such officers of the Royal Canadian Navy as were required to carry on the work of the service were retained, and the major number of these held, at that time, the rank of Lieutenant or Sub-Lieutenant. As there was no expansion which required additional officers over a period of six years from 1919 to 1925, no junior officers were entered. Those who were retained advanced through service, and are now in Lieutenant-Commander's rank.

In 1925 the entry of Cadets was again begun, and each year since then a small number have been entered. These junior officers are gradually filling the lower ranks, and this, combined with the pension scheme inaugurated in 1928, will bring the complement of officers into proper balance in the course of a few years.

During the past year three cadets were successful at the Cadetship examinations, and proceeded to England for training in H.M.S. *Erebus* with special entry cadets of the Royal Navy. One cadet who entered the previous year was unsuitable for service as a Naval Officer and was withdrawn.

One Lieutenant-Commander resigned his commission.

The system of alternating appointments of officers, i.e., two years afloat in H.M.C. ships, two years in a shore appointment in Canada, and two years' service afloat or attending qualifying courses in the Royal Navy, has continued in operation during the year. The distribution of officers at the close of the year follows:—

Headquarters, Ottawa.....	9
Serving Overseas.....	27
H.M.C.S. <i>Stadacona</i> , Halifax.....	15
H.M.C.S. <i>Champlain</i> , Halifax.....	5
H.M.C.S. <i>Ypres</i> , Halifax.....	1
H.M.C.S. <i>Festubert</i> , Halifax.....	1
On loan to R.C. Air Force.....	1
H.M.C.S. <i>Naden</i> , Esquimalt.....	16
H.M.C.S. <i>Vancouver</i>	5
H.M.C.S. <i>Armentieres</i>	1
New Construction, England.....	2
Total.....	83

Of the twenty-seven officers serving in the Royal Navy, the following attended the courses shown during the year:—

Imperial Defence Course—Commander G. C. Jones.
 Senior Officers' Technical Course—Commander P. W. Nelles.
 Naval Staff Course—Commander R. I. Agnew.
 Naval Staff Course—Lieutenant-Commander W. J. R. Beech.
 Long Torpedo Course—Lieutenant H. N. Lay.
 Sub-Lieutenant's Course—Midshipman E. W. Finch-Noyes.
 Sub-Lieutenant's Course—Midshipman J. C. Hibbard.
 Lieutenant's Course—Lieutenant K. F. Adams.

Cadets training in H.M.S. *Erebus*—Cadet F. E. Grubb; Cadet H. S. Rayner; Cadet C. M. Leavitt; Cadet B. Jewkes; Cadet P. E. Haddon; Cadet R. A. Webber.

Long Signal Course—Lieutenant H. Kingsley.
 Gunner's Course—Commissioned Gunner (Act) A. Turnbull.
 Gunner's Course—Gunner (Act) A. H. Baker.

The other officers on loan to the Royal Navy filled appointments in H.M. ships. Service in H.M. ships is of distinct advantage to officers of the Royal Canadian Navy, who keep up-to-date with the latest Naval developments, gain experience in the naval routine of large ships, and in squadron tactics, which they cannot do while serving at home, owing to the small number (and different types) of ships in commission.

Officers serving afloat in H.M.C. ships are employed on regular ships' duties, and those serving on shore at Headquarters and in R.C.N. Barracks, Halifax and Esquimalt, are employed on administrative and instructional duty.

Engineer Commander George P. Clarke died on February 17, 1930. Engineer Commander Clarke, at the time of his death, occupied the important and responsible position of Canadian Overseer for the construction of new destroyers. He was an officer of exceptional ability, and his death is a serious loss to the service.

The officers of the Royal Canadian Navy have maintained a high degree of efficiency throughout the year.

Ratings.—The 709 ratings serving in the Royal Canadian Navy are composed of 637 entered from shore in Canada and 72 on loan from the Royal Navy.

The Royal Navy ratings are, without exception, senior ratings with specialist qualifications. They are employed, for the most part, on instructional duty in their specialist branch, i.e., Torpedo, Gunnery and Wireless Telegraphy. In the last named branch particularly, development has been very rapid, and it was not possible to train Canadian ratings in sufficient numbers and within the time required to fill vacancies. This condition will disappear as soon as the ratings now under training complete their courses.

To meet personnel requirements for new construction, the net number of ratings has been increased by 50 during the past year. The newly authorized complement will be completed to strength in the spring of 1931, when the destroyers *Saguenay* and *Skeena* will be placed in commission. The actual number of new entries during the year is 150.

Entries have all been made from shore in Canada from amongst youths between 16½ and 26 years of age. A high standard of education and physical fitness has, in each case, been insisted upon. As the number of applicants has far exceeded the number required for entry, the Department has had a broad range of choice in entering new ratings, and has been able to pick the candidates from every province of the Dominion.

The result of careful recruiting is shown in the keenness of Canadian ratings in their training and service, and the signal success which they have attained while attending courses abroad. Their general bearing, conduct and efficiency have been most favourably commented upon by all authorities with whom they have come in contact.

The department has made full use of arrangements with the Admiralty for training ratings for specialist branches in R.N. establishments. The system is economical as the cost of five pounds per week for attendance at R.N. training establishments is small compared to the expense of equipping and maintaining training schools in Canada.

During the year ratings attended courses as follows:—

Torpedo Gunner's Mate.....	2
Leading Torpedoman.....	5
Seaman Torpedoman.....	5
Gunlayer, 2nd class.....	2
Seaman Gunner.....	8
Gunlayer, 2nd class requalifying.....	4
Seaman Gunner requalifying.....	3
Seaman Torpedoman requalifying.....	3
Torpedo Coxswain.....	2
Diver, 2nd class.....	2
Petty Officer's course.....	2
Seamanship course for Warrant Officers.....	1
Mechanical Training course.....	5
Yeoman of Signals course.....	1
Leading Telegraphist course.....	3
Telegraphist course.....	1
Signalman requalifying course.....	1

Ratings attending courses in the Royal Navy also served afloat in H.M. ships to gain practical experience.

The distribution of ratings in ships and establishments is as follows:—

Naval Headquarters.....	2
Serving Overseas.....	65
H.M.C.S. <i>Stadacona</i> , Halifax.....	200
H.M.C.S. <i>Champlain</i> , Halifax.....	94
H.M.C.S. <i>Ypres</i> , Halifax.....	21
H.M.C.S. <i>Festubert</i> , Halifax.....	19
On loan to Air Service.....	5
H.M.C.S. <i>Naden</i> , Esquimalt.....	197
H.M.C.S. <i>Vancouver</i> , Esquimalt.....	80
H.M.C.S. <i>Armentieres</i> , Esquimalt.....	22
New Construction.....	4
Total.....	709

One hundred and twenty-two ratings were discharged for reasons shown below:—

Continuous services engagement expired.....	33
Temporary services engagement expired.....	2
Deserted.....	23
Services no longer required.....	26
Dead.....	1
Invalided.....	5
Discharged by purchase.....	7
Unsuitable medically or educationally on final examination for entry.....	25

Of the thirty-three ratings whose continuous service engagement expired, twenty-two re-engaged.

The Militia Pension Act is now applicable to the Royal Canadian Navy. As its provisions became better known, the number of ratings re-engaging for further service increases. In the course of time these re-engaged ratings will advance, and will be able to carry on the specialist duties now performed by R.N. ratings on loan.

ROYAL CANADIAN NAVAL RESERVE

The authorized strength of the Royal Canadian Naval Reserve is 70 officers and 430 ratings. The force has not, however, been recruited to full complement owing to the limited appropriations available.

A nucleus organization has, however, been established and is functioning smoothly. This organization admits of ready expansion to full complement should the necessity arise.

Registrars are appointed at Halifax, Charlottetown, Quebec, Montreal, and Vancouver. These registrars arrange for the entry and training of officers and ratings attached to their port divisions, and are in local charge of all administrative matters pertaining to the Reserve.

The distribution of personnel is as follows:—

Port Division	Officers	Ratings
Halifax.....	15	37
Charlottetown.....	1	23
Quebec.....	7	36
Montreal.....	2	23
Vancouver.....	9	11
Total.....	34	130

Officers except Skippers are granted commissions during pleasure. Skippers and ratings enrol for five-year periods.

Officers of the Royal Canadian Naval Reserve are required to perform naval training as follows:—

Chief Skippers and Skippers.—Twenty-eight days biennially beginning with the first year of service.

Acting Midshipmen.—Six months' continuous service during first year and thereafter twenty-eight days biennially.

Acting Sub-Lieutenant and Acting Lieutenant (direct entry).—Twenty-eight days each year for the first three years and thereafter twenty-eight days biennially.

Lieutenant (direct entry).—Twenty-eight days during the first year and thereafter twenty-eight days biennially.

Executive officers may also be permitted to carry out voluntary service for periods up to an aggregate of three years, the Engineer officers up to an aggregate of two years.

Ratings carry out forty-two days' training during the first year of service, and thereafter fourteen days annually. They are also permitted to carry out six months' voluntary service during any one period of service.

The following table gives the number of officers and ratings attending naval training and voluntary service:—

Port Division	Officers		Ratings	
	Naval Training	Voluntary Service	Naval Training	Voluntary Service
Charlottetown.....			20	15
Halifax.....	6	2	27	18
Quebec.....	5		30	21
Montreal.....			17	18
Vancouver.....	3	1	9	3
Total.....	14	3	103	75

Twenty ratings were entered and twenty-four discharged.

ROYAL CANADIAN NAVAL VOLUNTEER RESERVE

The authorized complement is 70 officers and 930 ratings.

The following table gives the distribution of personnel, the localities where Company Headquarters are established, and the total numbers serving:—

Company Headquarters	Officers	Ratings
Charlottetown.....	2	50
Halifax.....	4	34
Saint John.....	3	44
Quebec.....	4	33
Montreal.....	5	72
Ottawa.....	4	40
Toronto.....	8	107
Hamilton.....	4	52
Winnipeg.....	8	77
Regina.....	4	56
Saskatoon.....	4	50
Edmonton.....	2	44
Calgary.....	4	48
Vancouver.....	3	43
Prince Rupert.....	3	26
Total.....	62	776

Two hundred and fifty-two ratings were discharged during the year and 275 ratings were entered. One hundred and eleven ratings re-enrolled for a further term of service. The following table gives distribution of entries, discharges, and re-enrolments:—

Company Headquarters	Entries	Discharges	Re-enrolments
Halifax.....	20	5	2
Charlottetown.....	7	12	3
Saint John.....	14	12	10
Quebec.....	20	13	4
Montreal.....	43	31	11
Ottawa.....	15	15	3
Toronto.....	48	42	15
Hamilton.....	10	7	12
Winnipeg.....	22	31	17
Saskatoon.....	19	19	6
Regina.....	18	15	6
Calgary.....	12	13	12
Edmonton.....	13	17	8
Vancouver.....	4	2	1
Prince Rupert.....	10	18	1
Total.....	275	252	111

The above figures indicate the increased popularity of the force. New entries exceed discharges and a noticeable increase has occurred in the number of ratings re-enlisting for a second or third term. In an organization requiring residence in a particular locality, it is difficult to prevent a large number of discharges, as ratings change their place of residence, and this cause alone accounts for discharge in 66 of the 252 cases shown. Seventy-six ratings were discharged engagement expired.

Officers of the Royal Canadian Naval Volunteer Reserve are required to perform 14 days' training annually and may be permitted to carry out a total of three months' voluntary service during each three-year period of service.

Seaman and Engine Room ratings carry out 14 days' training annually and Accountant Branch ratings perform 21 days' training during first year of service, and thereafter 14 days biennially. All ratings may be permitted to perform four months' voluntary service during each period of enrolment.

Training is performed in R.C.N. Barracks, Halifax and Esquimalt and in H.M.C. ships. Although it is not possible during the short training periods to train ratings thoroughly, they do, however, receive a good fundamental training in the principles of Seamanship, Gunnery, Torpedo, Signals, Wireless Telegraphy and Engine Room duties, which in conjunction with training at Com-

pany Headquarters, fits them to render valuable service in time of emergency or war.

SCHEDULE OF R.C.N.V.R. TRAINING

	Training		Voluntary Service	
	Halifax	Esquimalt	Halifax	Esquimalt
Officers.....	15	16	6	3
Ratings.....	302	221	112	94

Through the courtesy of the Commander in Chief, America and West Indies Station, the department sent 84 ratings for service afloat in H.M. ships cruising in Canadian waters for periods of one month. This training, which was in addition to the service shown in the foregoing schedule, afforded excellent experience under actual seagoing conditions, and facilitated training arrangements at Halifax and Esquimalt, where accommodation and training equipment is limited.

The activities at Company Headquarters are becoming more standardized and, as ratings gain experience by naval training, instruction in drill is of a higher standard. Attendance at drill was good throughout the year.

The following table shows the average number of ratings who attended drills during the year and the average number of drills performed per rating, for each Company Headquarters:—

Company Headquarters	Average number of ratings who attended drill	Average drills per rating
Halifax.....	21	45
Charlottetown.....	16	58
Saint John.....	31	45
Quebec.....	31	20
Montreal.....	59	37
Ottawa.....	28	31
Toronto.....	67	63
Hamilton.....	37	49
Winnipeg.....	69	29
Regina.....	38	44
Saskatoon.....	39	26
Edmonton.....	34	30
Calgary.....	35	33
Vancouver.....	19	31
Prince Rupert.....	11	31

Social activities organized by Company Headquarters and paid from private sources continues to add to the popularity of the force.

Organized athletics, which form an important phase of training, were well supported, and ratings entered enthusiastically into the various games.

Rifle practice has also gained in attendance by ratings. Miniature ranges are installed in Company Headquarters and the competition for trophies and prizes has developed keenness in attendance.

The force, as a whole has been efficient throughout the year, and has developed along lines to produce the maximum results from the limited funds at its disposal.

ROYAL FLEET RESERVE

By arrangements with the Admiralty the Canadian Naval Service maintains records and trains Royal Fleet Reservists, resident in Canada, up to the number of 150.

There are now in Canada 131 Royal Fleet Reserve ratings.

Fifty-six Class B.R.F.R. ratings completed annual drill during the year and 12 Class A ratings completed biennial drill.

The cost of training and transportation in connection with the Royal Fleet Reserve is recovered from the British Admiralty.

2. H.M.C. SHIPS

The following ships were in commission during the year:—

Based at Halifax—H.M.C.S. *Champlain*, Destroyer.

Based at Halifax—H.M.C.S. *Festubert*, Minesweeper.

Based at Halifax—H.M.C.S. *Ypres*, Minesweeper.

Based at Esquimalt—H.M.C.S. *Vancouver*, Destroyer.

Based at Esquimalt—H.M.C.S. *Armentieres*, Minesweeper.

Based at Esquimalt—H.M.C.S. *Thiepval*, Minesweeper.

All ships in commission were fully employed on training duty and completed training cruises.

Training in gunnery and torpedo was carried out in the destroyers which carry the armament required for the instruction of classes under seagoing conditions. These ships trained the personnel in all branches of Naval work.

Training in the minesweepers was more limited, and the cruises completed were of a few days' duration each. The training comprised seamanship, mine-sweeping, minelaying, elementary gunnery training, navigation, signals and W/T. The minesweepers were utilized for the major part of the year on reserve training duty.

During summer training cruises the destroyers visited the following ports:—

H.M.C.S. *Champlain*.—Beddeck, Sydney, Quebec, Montreal, Three Rivers, Riviere-du-Loup, Metis, Seven Islands, Charlottetown, Bar Harbour (U.S.A), Saint John, Liverpool, Lunenburg.

H.M.C.S. *Vancouver*.—Drew Harbour, Safety Cove, Namu Harbour, Skidgate, Lowe Inlet, Goose Island, Topaze Harbour, Vancouver, Prince Rupert.

During these cruises the destroyers were part of the time in company with ships of the America and West Indies squadron cruising in Canadian waters. While these ships were cruising together, joint gunnery, torpedo and tactical exercises were completed.

In January, 1930, both destroyers proceeded to Bermuda and joined the America and West Indies squadron. Joint cruises covering a period of three months were carried out, during which the Canadian destroyers took their place as units of the squadron. The training completed was of a benefit to the Canadian personnel.

Loss of H.M.C.S. Thiepval.—While cruising on life saving patrol in Barkley sound, on the west coast of Vancouver Island, H.M.C.S. *Thiepval*, on February 27, 1930, struck an uncharted rock and sank. A thorough enquiry showed that no responsibility for the loss of the ship was attributable to the Commanding Officer. In view of the age and general condition of the ship, it has not yet been decided if salvage is justifiable.

New Construction.—The new destroyers under construction have been named H.M.C.S. *Saguenay* and *Skeena*. Progress on construction has been excellent and the ships will be launched in the summer of 1930 and commissioned in the spring of 1931. The ships, when completed, will be destroyers of the latest type, specially adapted for service in Canadian waters and with suitable accommodation for training purposes.

3. R.C.N. BARRACKS

R.C.N. Barracks are established at the naval bases, Halifax and Esquimalt.

These Barracks provide accommodation for officers and ratings serving at the base, training facilities and school for ratings, and suitable training equipment for preliminary training in specialist subjects such as gunnery, torpedo, signals, wireless telegraphy and engine room.

An instructional staff of highly trained specialist officers, ratings and qualified schoolmasters are maintained on instructional duty and the courses established are thorough.

The general results at educational and professional examinations have been satisfactory, and ratings who have proceeded to England for advanced courses, have shown, in their high standing, the suitability of preliminary training through which they have passed.

The personnel at R.C.N. Barracks are encouraged to enter athletic activities as a part of the physical training organization and teams are entered in local athletic leagues. These comprise baseball, rugby and association football, softball, hockey and rifle shooting.

In addition to permanent force ratings, the Naval Barracks provide accommodation and training for officers and ratings of both the Royal Canadian Naval Reserve and the Royal Canadian Naval Volunteer Reserve.

Syllabuses are followed in the various courses for reserve personnel, which are cast to give a good basic training in the short period during which these individuals are in Barracks.

4. H.M.C. DOCKYARDS

The Dockyards at Halifax and Esquimalt were maintained for use of Imperial ships in Canadian waters for many years prior to 1910.

When the Royal Canadian Navy was established in that year both dockyards were taken over by the Canadian Government as an essential part of the naval organization.

These establishments have been maintained in an up-to-date condition and are equipped with modern machinery and workshops.

The dockyards not only function as repair and supply bases for the Canadian Naval Service, but carry out similar functions for other Dominion Government departments, ships of the Royal Navy and of the United States ice patrol.

Each dockyard is under the jurisdiction of a manager who is responsible for its internal organization and administration. In technical matters the manager is guided by the expert advice of technical naval officers with whom he co-operates in the closest manner.

The staffs are composed entirely of civilian employees and artisans. The civil staffs are small but are so organized that they may be readily expanded to meet requirements in an emergency.

The artisan employees are engaged for specific jobs on hand and are laid off when work is slack. For the past year both yards have been busy and the work entailed the continuous employment of a fairly large number of artisans.

H.M.C. Dockyard, Halifax.—All refits and repairs for H.M.C. Ships stationed at Halifax have been carried out in the dockyard. The dockyard has also carried out all repair work to ships of the Department of National Revenue, and has also completed repairs to ships of the Departments of Marine, Fisheries, Railways and Canals and to vessels of the United States ice patrol. The facilities of the dockyard have also been placed at the disposal of H.M. ships cruising in Eastern Canada waters. All services rendered to other Canadian Government Departments and to other Governments have been carried out on a repayment basis.

Ships of other departments have been provided with berthing accommodation at the wharves during the period of their winter lay up, and have also been supplied with ships' stores on a repayment basis.

H.M.C. Dockyard, Esquimalt.—All refits and repairs of H.M.C. Ships on the west coast have been carried out at the dockyard as well as repairs to ships of the Department of Marine, Fisheries and H.M. Ships cruising on the west coast of Canada. Docking and storing services have also been rendered as at Halifax.

5. NAVAL INTELLIGENCE

The Canadian division of the Admiralty intelligence organization, which is under the administration of Canadian naval authorities, has functioned satisfactorily throughout the year. The amount of information required with regard to shipping, port facilities and other matters has continued to increase, and the department has met all requirements in that regard.

Close co-operation with the intelligence organization of the other defence forces, has eliminated much duplication of work, and the exchange of statistical data has been of great assistance to all the services concerned.

6. NAVAL STORES

In keeping with the organization of the branch, and for convenience, the activities of the branch are dealt with under the following headings: (a) Naval and Victualling stores division; (b) Armament Supply division; and (c), Purchases.

NAVAL AND VICTUALLING STORES DIVISION

The main functions of the Naval and Victualling Stores Division have to do with the provision, issue and accounting of all naval stores, clothing and provisions for the R.C.N., R.C.N.R., and R.C.N.V.R. Stocks are maintained under experienced naval store officers at H.M.C. Dockyards, Halifax and Esquimalt. In addition to the stocks for the ordinary requirements of the authorized personnel and ships of the R.C.N. and Reserve forces, certain war reserves are maintained and provision is made to assist other Government departments as requested from time to time.

During the year under review, the activities of this division increased as regards the provision of adequate stocks, due to the exhaustion of the war stocks, as evidenced by the value of the stores purchased.

The stocks of the naval and victualling stores which include uniforms, mess traps and provisions at the close of the fiscal year 1929-30 amounted to \$641,016 at Halifax, and \$336,604 at Esquimalt.

The value of naval and victualling stores, handled other than those obtained on direct contracts, was as follows:—

HALIFAX DOCKYARD

(Not including naval armament stores)

Value of stores received.....	\$ 178,331 84
Value of stores returned from ships, etc.....	13,013 66
Value of stores issued.....	198,888 52

ESQUIMALT DOCKYARD

(Not including naval armament stores)

Value of stores received.....	\$ 117,321 77
Value of stores returned from ships, etc.....	6,383 42
Value of stores issued.....	127,271 09

Issues of naval stores to H.M.C. ships and establishments are only made in accordance with authorized allowances or for approved repairs, refits, new construction, etc. Naval uniform clothing is only issued in accordance with the uniform regulations and all foodstuffs are similarly subject to a standard scale of rations.

Supplementing the stores supplied through the dockyards, standing contracts were arranged through the Director of Contracts for the supply of fresh provisions and for certain other items which are drawn direct by the ship or establishment requiring them. Supply was also arranged of stores, fuel, etc., required by visiting Imperial warships as well as by ships of other Government departments, and purchases of large shipments of lumber and gases were made on behalf of H.M. Dockyard, Bermuda.

The value of the supplies taken up direct by H.M.C. ships and establishments on the standing contracts for fresh provisions, fuel, laundry, etc., in 1929-30 were:—

East coast.....	\$ 43,709 00
West coast.....	51,955 00

The coal used during the year both for heating and steaming was as follows:—

Halifax: 633 tons Welsh anthracite, 1,700 tons bituminous (Canadian).

Esquimalt: 1,974 tons bituminous (Canadian), (including contracts on coast of Vancouver island).

If the proposed Halifax-Dartmouth bridge is built, certain wooden store-houses at Halifax Dockyard may have to be removed and therefore renovation of these buildings has been deferred. The construction of more modern store-houses will be necessary in the near future.

Assistance to the Department of National Revenue in the storing of their vessels has been continued and at Halifax a building has been set apart for the sole use of the Customs Service Preventive Cruisers for landing their stores, etc.

The stocks at both yards have been again reviewed, and such articles as were found to be unserviceable or so obsolete that they could not be utilized have been disposed of through the Government Salvage Officer; the number of unserviceable articles returned by the ships have been fewer this year as no ships were being disposed of as in the past year.

The biennial program of stocktaking whereby the stock generally at both dockyards is taken within a two-year period and stock which is frequently replenished is taken twice, was pursued with eminently satisfactory results as no discrepancies of any consequence were discovered.

The store accounts at the dockyards, as examined under a system of concurrent audit, were found to have been kept very accurately, any discrepancies discovered being of a minor nature and readily adjusted. The store accounts from ships and establishments were also examined and found to be satisfactory; the stores supplied being properly accounted for with no serious deficiencies.

The victualling of the enlisted personnel under the system of general messing was carried out satisfactorily. During the year 56,220 meals were served at an average cost of 16 cents a meal, and while the cost was kept low, examination of the victualling accounts proved that within the governing scales an adequate and varied dietary suitable for naval requirements was provided.

A motor truck was purchased during the year for use at H.M.C. Dockyard, Halifax, and its services have proved to be very economical; the expenditure for cartage has been reduced and good use has been made of this truck for services other than the handling of stores alone.

NAVAL ARMAMENT SUPPLY

The functions of this division have to do with the provision, receipt, issue, care and maintenance, repair, testing, examination, accounting and audit of all naval armament stores, comprising ordnance, ordnance stores, ammunition, torpedoes, torpedo stores, paravanes, mines and depth charges, in connection with the Canadian Naval Service and Imperial Service at Halifax and Esquimalt.

Armament Supply Depots are maintained at Halifax and Esquimalt and comprise storehouses where the necessary facilities for the care, issue and receipt of guns, gun mountings, and torpedoes are available; magazines for the proper stowage, care and maintenance of the respective classes of explosives; and workshops for carrying out the necessary repairs and alterations to ordnance and ordnance stores authorized by the list of changes in war material.

At Halifax, the naval portion of the joint service magazines, Bedford Basin, is practically complete and consists of twenty-four buildings. A small building for the breaking down of ammunition has been erected this year enabling this operation to be isolated from store buildings, thus producing a greater degree of safety.

By arrangement with the Admiralty, the duties of inspecting naval ordnance and of making tests and proofs of naval explosives on Imperial charge were taken over by the Naval Armament Supply Officer, who is the inspecting officer for ordnance and ammunition in the Canadian Naval Service. By this arrangement the examinations, tests and proofs of both Canadian and Imperial stocks of ammunition are now carried out as one operation, resulting in a saving of time and expense.

During the winter months of 1929-30 some difficulties were encountered in keeping communication open to the magazines owing to the freezing up of Bedford Basin. The steam boats available were unable to break up this ice at all times and the services of ss. *Stanley*, icebreaker, were requisitioned from the Department of Marine. This service was rendered free of charge. It is becoming increasingly apparent that a vessel of such dimensions as to be able to break through twelve inches of ice is necessary, in order that communication may be maintained by water with the magazines at all times, particularly as the road from Dartmouth to Bedford becomes practically impassable during the winter months.

At Esquimalt the magazines are located on Cole Island and are in a bad condition generally, in no way conforming to the regulations. Although the quantities of explosives at present stored there are small, the fact that the buildings are in such poor condition and only a few feet apart, constitutes a risk which should not be accepted any longer than is absolutely necessary.

The stocks of armament stores at Halifax and Esquimalt are maintained in an efficient manner and have been depleted of all obsolete and unserviceable stores. Stock provision for the requirements of the Canadian naval service is made under an agreement with the British Admiralty to maintain sufficient reserves of ammunition for issue to H.M.C. ships on repayment as required. Under this agreement the storekeeping of all Imperial stocks, whether for ultimate issue to Imperial or Canadian services, is undertaken by the department in return for the provision of the necessary reserves by the Admiralty.

The store accounts of both depots, and of ships and establishments, have been kept and rendered in a satisfactory manner, as shown by the audit thereof.

The following is the value of receipts and issues made during the year, exclusive of all transactions from Imperial stocks:—

Naval Armament Supply Depot, Halifax—

Receipts.....	\$39,240
Returns.....	16,941
Issues.....	50,880

The above issues are exclusive of the value of ammunition stored at Halifax for supplying requirements at Esquimalt, B.C., the issue of which during the year amounted to \$41,120.

Naval Armament Supply Depot, Esquimalt—

Receipts.....	\$49,684
Returns.....	27,800
Issues.....	43,845

The above are exclusive of issues of torpedoes to H.M.C. Ships and Establishments in lieu of others returned for overhaul and test. The value of these transactions during the year were: Issues, \$55,000; returns, \$44,809.

The various R.C.N.V.R. units were supplied with new rifles purchased the previous year, in addition to the necessary stores for training.

The stocks of armament stores, both Imperial and Canadian, were verified under a system of continuous stocktaking, the results of which were very satisfactory.

PURCHASES

As in past years, assistance was afforded the Contracts Branch whenever possible in connection with the purchase of stores required for the Naval Service. Decisions have been given on technical questions entering into such purchases.

At the dockyards local purchase was made of such stores as are required in an emergency or which are of such a nature as to be best obtained locally. In all instances competitive tenders were invited.

The value of local purchases made at the dockyards during the year amounted to \$72,064 at Halifax and \$48,078 at Esquimalt.

Local purchases were similarly effected by H.M.C. ships and establishments, comprising for the greater part fresh and miscellaneous provisions not issued by the dockyards, and on the basis of standing contracts arranged by the department from headquarters.

During the year the total value of naval, victualling and armament stores purchased on account of the Naval Service, by local purchase and otherwise, for delivery to the store depots and to the service direct, amounted to \$560,671.

7. FINANCIAL STATEMENT

The following financial statements show a total expenditure during the year of \$3,013,752.50. A revenue of \$21,709.73 was derived from rentals, refunds, discharges by purchase, sale of stores, etc.

(d) New Destroyers under construction at Southampton, England, John I. Thornycroft Co., Ltd., contractors.

8. GENERAL

The general organization of the Naval Service during the year has functioned satisfactorily.

The cruises of H.M.C. ships to the different ports in Canada have proved to be popular, and the reception accorded naval personnel during these visits has been most courteous. The cruise of the two destroyers to the West Indies during the winter months, in addition to the valuable training results attained, was an excellent advertisement for Canada. The Canadian ships were present at the tercentenary celebration at Nasseau, Bahamas. The following extract from the address in reply to the Governor of the Bahamas' speech on the occasion of the opening of Parliament on March 18, 1930, gave a clear idea of the appreciation with which the Canadian visitors were received:—

"We regard the visit of the destroyers *Champlain* and *Vancouver* of the Royal Canadian Navy as a happy omen, and evidence of the expanding relations between the Great Dominion and her Imperial colleagues in the West Indies."

The co-operation between the Naval, Militia and Air Forces has been further forwarded and joint operations by all three working in conjunction were very gratifying.

The following extract from the communication received from the militia authorities in regard to joint operations on the west coast is quoted.

"The assistance rendered by the officers and ratings of the Royal Canadian Navy was most satisfactory, and the manner in which the work was carried out is greatly appreciated."

The value of assistance rendered to ships of the Royal Navy is conveyed in the following extract from a communication received from the Commander in Chief, America and West Indies Squadron:—

"I have the honour to inform you that I have received from the Commanding Officer, H.M.S. *Colombo*, a report on the musketry course carried out by that ship during her recent stay at Comox, B.C.

"The Commanding Officer states that H.M.C.S. *Armentieres* was of great assistance, and that the Canadian Naval authorities gave most valuable help.

"I wish to convey my thanks to you for such valuable co-operation, and I beg that you will transmit them also to the Royal Canadian Naval authorities at Esquimalt."

The health of the naval forces has been excellent throughout the year.

I wish to express my appreciation of the esprit de corps of all naval and civil personnel of the Naval Service.

I am, sir,

Your obedient servant,

WALTER HOSE,
Commodore, R.C.N.,
Chief of the Naval Staff.

To His Excellency the Right Honourable the Viscount Willingdon, G.C.S.I.,
G.C.M.G., G.C.I.E., G.B.E., Governor General and Commander in Chief
of the Dominion of Canada.

MAY IT PLEASE YOUR EXCELLENCY:

The undersigned has the honour to present to Your Excellency the Annual Report of the Department of Pensions and National Health, including the reports of the Board of Pension Commissioners for Canada and the Federal Appeal Board, for the fiscal year ended March 31, 1930.

I have the honour to be,

Your Excellency's most obedient servant,

MURRAY MACLAREN,

Minister of Pensions and National Health.

December 31, 1930.

THE DEPARTMENT OF PENSIONS AND NATIONAL HEALTH

MINISTER—Col. The Hon. Murray MacLaren, C.M.G., M.D., C.M. (Edin.), M.R.C.S., F.A.C.S.
DEPUTY MINISTER—Lt.-Colonel J. A. Amyot, C.M.G., M.B., Tor.

PENSIONS

Head Office.....Daly Building, Ottawa

ASSISTANT DEPUTY MINISTER—J. W. McKee.

DIRECTOR OF MEDICAL SERVICES—Lt.-Colonel Ross Millar, M.D.

SECRETARY—E. H. Scammell, F.C.I.S.

FINANCIAL CONTROLLER—Captain G. W. F. Hodgins, M.C.

INTRODUCTORY LETTER
TO REPORT OF THE
DEPARTMENT OF PENSIONS AND NATIONAL HEALTH

Colonel, the Hon. MURRAY MACLAREN, C.M.G., M.D., C.M. (Edin.) M.R.C.S.,
F.A.S.C., M.P.

Minister of Pensions and National Health,
Ottawa,

SIR,—In accordance with your instructions, I have the honour to submit the attached report of the work of the Department of Pensions and National Health, Board of Pension Commissioners for Canada and the Federal Appeal Board for the fiscal year 1929-30.

The report is divided into four sections:

- (1) Department of Pensions and National Health, Pensions Division.
- (2) Board of Pension Commissioners for Canada.
- (3) The Federal Appeal Board.
- (4) The Department of Pensions and National Health, Health Division.

DEPARTMENT OF PENSIONS AND NATIONAL HEALTH

PENSIONS DIVISION

The work of the Pensions Division has continued to expand during the fiscal year as is indicated by the statistics and tables contained in the attached report.

The number of admissions to hospital during the previous year was 8,890, a greater number than in any year since 1922. During the year under review, the number was 9,991. The total number who received in-patient treatment was 12,828, as against 12,147 in 1928-29 and 11,030 in 1927-28. Treatments under the out-patient department increased from 104,091 to 122,651.

Of the number actually in hospital on March 31, 1930, 2,103 were in departmental hospitals, while 1,300 were in civil institutions, making a total of 3,403, as against a total of 2,973 at the end of the previous fiscal year.

The number of veterans' care cases showed an increase of 7, the total being 183.

The output of the orthopædic and surgical appliance factories has been maintained with a slight increase.

The number of pensioners who have been granted relief was 4,182 in 1927-28, 4,647 in 1928-29, and 5,548 in 1929-30.

In the Vetract Shops, 206 men were admitted and 198 discharged. The number employed on March 31, 1930, was 304.

Vocational and probational training have been continued to a small extent. Twenty-four men were taken on for vocational training and 45 for probational training during the year.

There was a falling off in the number of applications for returned soldiers' insurance, due, doubtless, to the monetary stringency. The number of applications was 3,580, as against 4,757 during the previous fiscal year. Two hundred and eighty-one applications were refused for various reasons. Notwithstanding the employment situation, the number of surrenders was slightly less than during the previous year. The number of policies in force on March 31, 1930, was 29,113, an increase during the year of 1,640.

The provision under which the department assumes responsibility in respect of accidents sustained by pensioners of 25 per cent and upwards while engaged in industry, continues to be of benefit to these men as otherwise they would, in many cases, be excluded from employment. The expenditure is largely governed by the number of fatal accidents. During the fiscal year under review, the number of claims made was 209 and the expenditure was \$35,727 which is practically double the expenditure during 1928-29, although only about one-half of that in 1927-28.

The following is an epitomized statement of the manner in which the funds appropriated by Parliament have been dealt with and also sets forth the costs of administration and the adjudication of pensions in amount and percentage.

Direct payments to men and dependents.....		\$44,348,724 59
Payments for services to men and dependents.....		3,954,283 22
Capital expenditures		57,594 74
Stores purchased		607,773 94
Payments to outside organizations		44,414 73
Recoverable expenditures		170,266 63
		<hr/>
Insurance premiums revenue	\$1,666,895 43	\$49,183,057 85
Casual revenue	150,904 71	
		<hr/>
		1,817,800 14
		<hr/>
Administration expense		\$51,000,857 99
		<hr/>
		1,344,425 32
		<hr/>
Expense of the Federal Appeal Board and the Board of Pensions Commissioners		\$52,345,283 31
		<hr/>
		503,882 09
		<hr/>
		\$52,849,165 40

DEPARTMENTAL ADMINISTRATION EXPENSE

General, Treatment, Pensions and returned Soldiers' Insurance	\$ 1,344,425 32

		.953%
Total administration and adjudication expense	\$ 1,848,307 41	
Percentage—All expense		3.497%

Summarized and complete details of the work of the Board of Pension Commissioners for Canada are included in the sections of the report governing the activities of this board.

Since the end of the fiscal year as a result of legislation passed at the first session of Parliament in 1930, a number of changes have been made in the work of the department and in the provisions of the Pension Act. After a general discussion in Parliament, all matters concerning the welfare of the veterans were referred to a special committee in the House of Commons. The desire to enlarge

the scope of the legislation in order specially to benefit those who were in need was evident throughout the entire procedure and the report submitted by the committee was unanimous.

The department presented a tentative Bill providing for the issue of allowances to veterans in Canada, both pensioners and non-pensioners, who are unemployable by reason of intangible results of their war service apart from any consideration of their pensionable disability. This Bill with some minor amendments was approved. The Act based thereon follows the lines laid down in the Old Age Pension Act, but sets an age limit of sixty instead of seventy, or an earlier age if the veteran is permanently unemployable by reason of physical or mental disability. The maximum allowance is \$240 per annum for a single man, and \$480 per annum for a married man if he and his wife are residing together. An income of \$125 per annum enjoyed by a single man, or \$250 enjoyed by a married man, whether consisting of personal income or pension, will not be taken into account, but anything in excess of these sums, other than casual earnings, will reduce the allowances payable.

Departmental officials have recognized for several years that there was an economic necessity to render some assistance, other than by way of pension, to men permanently unable to engage in remunerative employment who have seen real service, and the present Act, after many months of investigation of the problem, is the result. It does not apply to all who served in the Canadian forces, but only to those who served in a theatre of actual war, or who are in receipt of a pension or who have accepted a final payment in lieu of annual pension for injury or disease incurred or aggravated during service in respect of 5 per cent or more total disability. In addition it applies to those who served in any of His Majesty's forces or the forces of any of His Majesty's Allies, who were domiciled in Canada at the time of enlistment and who served in a theatre of actual war.

The operation of the Act is placed under a War Veterans' Allowance Committee consisting of three members. This committee is independent of the department, although after it has granted an allowance, the department is charged with the duty of the payment and administration thereof.

The major amendments to the Pension Act deal with the re-hearing of pension applications, the lodgment of appeals, the removal of time limits, the broadening of the meritorious section, the stoppage of final payments, the reinstatement to pension of pensioners who accepted a final payment, the provision that marriage after the appearance of the disability before the 1st of January, 1930, is not a bar to the granting of a widow's pension, and a section dealing with the "benefit of doubt".

Under the amendments, the Federal Appeal Board ceased to function on September 30, 1930. Provision was made for the appointment of a Pension Tribunal consisting of nine persons and a Pension Appeal Court consisting of three persons.

The new procedure provided that applications be made in the first instance to the Board of Pension Commissioners for Canada, but that if a pension is not awarded, the case be referred, through the channels provided for in the Act, to the Pension Tribunal, to be dealt with by a quorum of that body at an open hearing.

An appeal lies from any decision of the Pension Tribunal to the Pension Appeal Court on the subject of attributability, or whether any pre-enlistment disability was wilfully concealed, was obvious, was of a nature to cause rejection

from service, or was congenital; or in respect of the degree of any pre-enlistment disability; or the right to receive pension in respect of any period prior to the date of the application therefor; or the jurisdiction of the Board of Pension Commissioners or the Pension Tribunal to deal with an application; or the interpretation of any provision of the Pension Act. There is no appeal in respect of assessment. All applications previously disposed of by the Federal Appeal Board or the Board of Pension Commissioners may be renewed under the amendment.

Provision was made for the establishment of a branch of the department to be known as the "Veterans' Bureau". This has taken the place of the previous organization of Soldiers' Advisors. The head of the bureau is known as the Chief Pensions Advocate and cases are presented to the Tribunal and the Court by him and by Pensions Advocates located in various parts of Canada. In addition Commission Counsel have been appointed to appear on the hearing of any application and to assist the Pension Tribunal and the Pension Appeal Court in disposing of claims.

By the removal of the time limit, applications for pension or for reconsideration of any decision or award can be made at any time.

The Board of Pension Commissioners, acting alone, is authorized to award a compassionate pension or allowance under the meritorious section. Applications under this section may be renewed before the Pension Appeal Court by its order.

Notwithstanding that the granting of final payments to those with a pensionable disability of under 15 per cent has been of material benefit to a number of pensioners, in many cases it has created a hardship, in that the money paid has been expended and no further pension has been payable unless the disability has increased. Under an amendment to this effect, no further final payments can be made, and those who have already received such payments are being restored to pension as from the time at which the amount of the final payment received was equal to the sum of the instalments of pension which would have been paid if pension had been continued in the same monthly amount. The restoration to pension and the continuation thereof is subject to the condition that the disability has persisted.

The provision that the widow of a member of the forces whose death results from a war disability shall be entitled to a pension, if she was married to such a member of the forces either before he was granted a pension or before the first January, 1930, has benefited between eight hundred and nine hundred widows, and it will benefit a great many in the years to come.

From the commencement of the Pension Act there has been a provision that the widow of a man who was in receipt of a pension of 80 per cent or upwards, would be granted a pension on the death of her husband, whether his death was attributable to his service or not. At first the time limit during which death from a non-service disability must occur was set at five years from date of discharge or date of commencement of pension, meaning any degree of pension. This was subsequently enlarged to ten years. Reference to the date of discharge has now been struck out and the ten-year period made to run from the time the pensioner is or was placed on a pension of 80 per cent or upwards.

With regard to the "benefit of doubt", it may be well to quote the phraseology of the Act which reads as follows:—

"Notwithstanding anything in this Act, on any application for pension the applicant shall be entitled to the benefit of the doubt, which shall mean that it shall not be necessary for him to adduce conclusive proof of his right to pension applied for, but the body

adjudicating on the claim shall be entitled to draw and shall draw from all the circumstances of the case, the evidence adduced and medical opinions, all reasonable inferences in favour of the applicant."

The work of the Federal Appeal Board during the fiscal year is set out in the section of the report covering the activities of the Board. In view of the fact, however, that the Board ceased to function on September 30, 1930, the following general particulars are given. During the six months subsequent to March 31, 2,080 cases came before the board for hearing. The monthly average of hearings in this period was considerably more than in any previous 6 months of the board's existence. During this time, 2,238 claims were registered.

In the entire seven years of the board's existence 22,237 appeals were placed before it. Of this number 10,602 were heard; judgments were rendered on all but 81 of the cases heard. The greater number of the 81 cases on which judgment was not issued were claims where the hearings had been adjourned in order that the appellant might endeavour to obtain additional evidence in connection with his claim.

Of the balance of 11,635 cases registered with the board, 4,167 were disposed of as being outside the board's jurisdiction; 1,299 appeals were re-opened and settled by the Board of Pension Commissioners without the necessity of coming to appeal hearing; 754 was the total of cases where further information was required before an exact classification could be made; this including 251 appeals received in the last few days of the board's existence. 5,415 cases normally would have come before the board for hearing later, although in 1,749 of these Official Soldiers' Advisers had stated that they were not ready to proceed.

The members of the board were appointed by Order in Council dated August 17, 1923, and its work continued from that time without a break until its dissolution on September 30, 1930.

The total additional annual liability in respect of pensions awarded under decisions of the Federal Appeal Board on account of adjustments made up to August 31, 1930, was \$823,167.88. In addition the sum of \$2,280,417.80 was paid to ex-members of the forces and their dependents on account of retroactive adjustments of pension and treatment allowances under decisions of the board.

NATIONAL HEALTH DIVISION

During the year under review, in the administration of the Food and Drugs Act through the Food and Drugs Division, considerable progress was made in the methods of controlling adulteration and misbranding, not only in food and drugs of Canadian manufacture, but also in those imported.

Much has been accomplished through the Narcotic Division in the control of the distribution of narcotics, and the very material improvement mentioned in my last report, has been continued.

In the Immigration Medical Inspection Division, the policy of having the medical examination of prospective emigrants to Canada from the British Isles and the continent of Europe conducted prior to their embarkation was continued with satisfactory results.

The quarantine service at the principal ocean ports was maintained and no major infectious disease made its appearance during the year.

The work of the Division of Child Welfare on Maternal Mortality has resulted in increased attention being paid to that subject by the medical profession and the public. The new publications of the Division on Infantile Paralysis and Rickets were in great demand by physicians and the general public.

The chief sanitary engineer of the department, through his division, reports further material progress in the protection of the travelling public and crews aboard common carriers in traffic throughout the Dominion of Canada. The work done during the Shrine Convention at Toronto has made available interesting and worthwhile information concerning a sanitary phase of railroad travel which has not been brought to light heretofore. Conventions involving the movement of thousands of people present a problem that has to be carefully handled by the railroads and sanitarians concerned.

I have the honour to be, sir,

Your obedient servant,

J. A. AMYOT,

Deputy Minister.

DENTAL SERVICES

The Dental Division is responsible for the provision of dental services, but eligibility to receive same is determined by the Board of Pension Commissioners, and the Medical Division.

The following classes are entitled to be supplied with dental relief, the type of dental treatment permissible differing with the classification.

1. Ex-service men who require dental treatment for conditions accepted by the Board of Pensions Commissioners as the result of injuries or disease attributable to service.

2. Ex-service men who are undergoing courses of medical or surgical treatment as in-patients in a hospital, or sanatorium, or as out-patients, certified by the specialist in charge of the case, to require dental attention as an essential part of the treatment occasioned by pensionable disabilities, also pensioners called in for pension examinations certified by the pensions medical examiner to require dental attention to reduce or prevent an increase in the pensionable disability.

3. Ex-service men receiving treatment in a mental institution under the control of the department who are not eligible for dental treatment as above may be given whatever dental attention the dental surgeon may certify to be absolutely necessary for their health and comfort.

Dental services are supplied through departmental clinics and dental representatives. Clinics are located mainly in departmental institutions. Dental representatives provide dental services in those localities not served by departmental clinics, and are paid for such services at departmental rates.

The number of dental clinics operated by the department underwent no change during the fiscal year 1929-30, and remains at ten.

There has been an increase in the number of clinical treatments and number of patients completed during this fiscal year as compared with the previous fiscal year. The following are the comparative figures:—

	1928-29		1929-30	
	Treatments	Patients	Treatments	Patients
Departmental clinics.....	32,517	1,334	32,916	1,475
Dental representatives.....	3,038	318	8,209	708
United States Veterans' Bureau.....	673	65	1,020	94
Total.....	36,228	1,717	42,145	2,277

ORTHOPÆDIC AND SURGICAL APPLIANCES

The manufacture of artificial limbs was first undertaken by the department in 1916, since when there has been a steady progression and development of orthopædic services. These not only include the major type of appliances, i.e. artificial legs and arms, spinal braces, arm and leg splints, orthopædic boots, but also all classes of minor appliances such as artificial eyes, facial masks, eye-glasses, body belts, etc.

This branch is responsible for the manufacture or supply of any prosthesis which a disabled ex-member of the forces has to wear, or use, on account of injury or disease related to his military service; these are supplied, maintained and renewed at departmental expense. Certain beneficiaries who have been accepted for treatment by the department may receive prostheses as an adjunct to treatment when on departmental strength only.

Orthopædic services are rendered through a main manufacturing and fitting depot at Toronto; branch depots at Halifax, Saint John, Montreal, Ottawa, London, Winnipeg, Regina, Calgary and Vancouver, with sub-depots at Edmonton and Victoria.

During the year under review the development of the manufacture of metal limb component parts of Duralumin has been very gratifying and the department is nearing the stage where the entire limb will be produced within the Dominion.

It will be noted from the statistics which follow that appliances are also made for beneficiaries of Allied Governments and Workmen's Compensation Boards, and in addition a few are supplied to beneficiaries of other Dominion Government departments.

NUMBER OF VARIOUS APPLIANCES ISSUED BY THE ORTHOPÆDIC AND SURGICAL APPLIANCES DIVISION

EMPLOYMENT

Applications and placements of disabled ex-service men during the fiscal year ending March 31, 1930:—

EMPLOYMENT SERVICE OF CANADA

Placements—Permanent.....	2,285
Placements—Temporary.....	6,065
Cancellations.....	4,603
Unemployed.....	1,729
Total.....	14,682

MONTREAL REHABILITATION COMMITTEE

Placements—Permanent.....	285
Placements—Semi-permanent.....	489
Placements—Temporary.....	1,022
Cancellations.....	200
Unemployed.....	846
Total.....	2,842

EXPENDITURE

Salaries—\$9,199.50. Office expenses—\$614.94. Total—\$9,814.44.

SUMMARY

COMPARATIVE STATEMENT of Applications and Placements of ex-service men during the fiscal year ending Mar. 31, 1929—Mar. 31, 1930.

Year ending	Applicants	Placements	Cancellations	Pending placements
March 31, 1929.....	17,998	11,307	4,565	2,126
March 31, 1930.....	17,524	10,146	4,803	2,575

EMPLOYMENT

Applications for assistance in obtaining employment decreased..... 474
 The number of men for whom employment was found decreased 1,161.
 This is partially accounted for by decreased number of applicants.

Total number of pensioners in Canada, March 31, 1930..... 48,145
 Total number of pensioners outside Canada, March 31, 1930..... 8,851

Total number of pensioners..... 56,996
 Increase in number of pensioners over previous year..... 2,376
 Of this number 2,575 were registered as unemployed, an increase of 449 over previous year.

RELIEF

Relief is issued in the form of orders for food, rent, fuel, etc. When these orders are submitted by vendors or landlords with a certificate that the goods have been delivered or services rendered, payment is made. The actual expenditure during the fiscal year was \$517,947.19, a portion of which was in respect of orders issued prior to March 31, 1929. The value of orders issued during the fiscal year 1929-30 was \$510,081.15.

The following statement shows the relief granted by the department to pensioners and commuted pensioners during 1929-30 as compared with previous years:—

	1926-27	1927-28	1928-29	1929-30
Number of men.....	4,079	4,182	4,647	5,548
Number of times relief issued.....	32,999	38,373	36,602	51,155
Average number of times relief issued per man.....	8.09	9.18	7.88	9.22
Value of relief orders issued.....	\$ 333,222 02	\$ 390,004 02	\$ 367,231 48	\$ 517,947 19

SHELTERED EMPLOYMENT

Veteraft factories operated by the department are located at Halifax, Montreal, Toronto, Hamilton, Winnipeg and Vancouver and at Victoria one is operated under an agreement with the Canadian Red Cross Society. Unfortunately the workshop at Vancouver was totally destroyed by fire on February 19, 1930.

These factories give employment under sheltered conditions to former members of the Forces who have been classified as "Problem Cases." The object is to study carefully the physical and mental condition of the man and to graduate him through different stages of work until his self-confidence and work ability are restored and he is able to accept employment in the outside labour market. Unfortunately industrial conditions have been such that great difficulty has been experienced in placing men in outside industries.

During the year under review efforts were continued towards making the benefits of sheltered employment more active and 206 new cases were admitted and 198 discharged. On March 31, 1930, 292 men were on the strength. The problem of operating these Vetreft Factories with sub-standard labour is a difficult one in view of the keen competition which has to be met, but on the whole the response from those employed, many of whom have little remaining work value, is very good. The poppies and wreaths which are distributed for sale throughout the Dominion on Armistice Day provide work for men who would have little or no value in any other class of occupation.

VOCATIONAL TRAINING

On March 31, 1930, there were 10 men undergoing vocational training, distributed as follows:—

District	On strength 1-4-29	Taken on strength	Struck off strength	On strength 31-3-30

ACCOUNTS BRANCH

The various items of income and expenditure set out in statement No. 1, are in agreement with the amounts shown in the Public Accounts and Auditor General's reports.

Complete details of the financial operations will be found in the statements which follow. These statements are shown in the same form as in preceding year; a short description of each is given:—

1. *Income and Expenditures, Fiscal Year 1929-30*

On the left side is shown the appropriations granted by Parliament; revenue received from all sources, together with the balances of trust funds as at the first of the year.

On the right side is shown the gross disbursements made, divided into direct payments to men and their dependents, both on account of pensions and re-establishment, payments for services rendered such men, and payments made to outside organizations which render service to returned men, unexpended portions of the appropriations voted by Parliament for the fiscal year and the balances of trust funds at the close of the year.

The summary statement covers the main divisions of the department's income and expenditure condensed for reference purposes.

2. *Net Disbursements on Pensions Account for the Period April 1, 1916, to March 31, 1930, by Fiscal Years*

3. *Net Disbursements of the Department of Pensions and National Health on Re-establishment Account for the Period July, 1915, to March 31, 1930, by Fiscal Years*

4. *Current Assets of the Department as at March 31, 1930*

Cash advances made for travelling, petty cash, maintenance accounts, outside institutions, Red Cross Workshops, etc.

Stores—Value food, equipment, etc., held by department for use in hospitals, offices, etc.

Disposal stores—Surplus goods available for sale or transfer to other Government departments.

5. *Vocational Loans as at March 31, 1930*

Outstanding loans distributed by provinces.

6. *Accounts Receivable at March 31, 1930*

Amounts due from Great Britain, British Dominions, United States and Allied Governments for treatment of their ex-nationals, services rendered Canadian Government departments—Department of National Defence, Department of Indian Affairs, etc.—amounts due from outside hospitals and sanatoria.

7. *Passenger, Freight and Express Transportation as at March 31, 1930*

Services of the department on which passenger transportation expense was incurred; freight and express on goods purchased, shipped, etc.; distributed according to railways used.

8. *Department of Pensions and National Health and Pensions Appropriations by Fiscal Years to March 31, 1931*

APPENDIX

ADMINISTRATION OF CANTEEN FUND

ONTARIO

Trustees:

Major Gen. V. A. S. Williams, C.M.G., Chairman.

Lieut.-Col. Bertram O. Hooper, D.S.O., M.C.

Capt. W. S. Haney, M.P.P.

Capt. John Jules Ferry.

Mr. Percy T. Bould.

Major Alexander C. Lewis, Secretary.

On reviewing the operations of the Ontario Canteen Fund the trustees feel that it has functioned very satisfactorily in supplying assistance in urgent cases of need amongst ex-service men and their dependents.

For the year 1928-29 the trustees report that they were able to close the year's operations with a favourable balance on the right side of the books, feeling at the same time that no worthy case brought to their attention had been neglected.

The educational activity is the one in which the trustees are most interested in and is also the one which meets with the most general approval amongst the men themselves.

From the report of 1929-30 it is noted that the demands on the resources of the fund during the year showed a very large increase over the previous period. In accordance with the Board's policy no application deserving of assistance and coming within the fund has been refused or neglected.

The trustees express their appreciation of the assistance they have received from the branches of the Canadian Legion throughout the province.

The following statements of accounts cover the years 1928-29 and 1929-30:—

1928-29

QUEBEC

Trustees:

Brig.-General G. E. McCuaig, C.M.G., D.S.O.

Brig.-General E. deB. Panet, C.M.G., D.S.O.

Lt.-Colonel C. B. Price, D.S.O., D.C.M.

Lt.-Colonel John F. Buckley, Secretary.

The trustees have continued the policy previously adopted and carried out, during the year under review.

Relief has been granted and assistance given in cases of ex-soldiers and their dependents which, after thorough investigation, were found deserving. Assistance has been given principally in cases of sickness, accidents or other circumstances beyond the recipients' control.

The following is a statement of receipts and expenditures:—

Investments 1-4-29.....	\$ 294,325 50	Overdraft 1-4-29.....	\$ 203 42

NOVA SCOTIA

Trustees:

Capt. the Rev. Clarence MacKinnon, D.D., Chairman.

Major Edgar J. Vickery, Secretary.

Mr. John Vincent MacNeil.

During the two years under review the Nova Scotia Board of Trustees has continued the policy of granting assistance in cases of ex-service men and their dependents where deserving. Assistance was given to tubercular cases at the sanatorium and locally until such time as more adequate provision could be made for them by the Government.

The trustees have made direct contributions to the Canadian Legion as in this way valuable assistance could be granted to returned men as a whole.

The trustees have also issued loans to ex-service men in temporary difficulties. These loans are repayable to the fund.

The following is a statement of receipts and expenditures:—

1928-1929

Investments.....	\$ 38,563 25	Sickness relief (\$6,001.64, less repayment \$4,009.96).....	1,991 68

NEW BRUNSWICK

Trustees:

Major J. P. Bourgeois, Chairman.

Major J. Gilbert Hart, Secretary.

Lieut.-Col. M. C. Buchanan, M.C.

During the period under review the New Brunswick Board of Trustees had administered the fund under the policy pursued in previous years.

In consequence of the exceptional unemployment situation in this province during this year, the demands on the fund have been proportionally greater.

The board having found that in some instances payment in cash did not reach the families, it was decided to adopt the practice of issuing relief by means of order vouchers for groceries, fuel and rent, thereby ensuring relief where the greater distress existed. The present procedure is similar to that followed by the Department of Pensions and National Health.

The method of investigation has been further improved and with the co-operation of the Canadian Legion, the Red Cross Society, the Family Welfare Bureau, the Dominion Employment Bureau and others, complete information of each case has been obtained.

The following is a statement of accounts:—

Investments 1-4-29.....	\$ 87,208 37	Relief and grants, less repayments...	\$ 7,168 64
Cash on hand 1-4-29.....	3 36	Canada service.....	75 00
Loans outstanding 1-4-29.....	150 00	Advance Imperial Canteen fund.....	115 00

Interest.....	3,810 19	Balance on hand 31-3-30.....	541 83
Profit on sale of bonds and exchange...	36 05	Investments 31-3-30.....	83,062 12
	<u>\$ 92,022 37</u>		<u>\$ 92,022 37</u>

BRITISH COLUMBIA

Trustees:

Lt.-Col. A. D. Wilson, D.S.O., Chairman.

Col. W. W. Foster, D.S.O.

Capt. W. Hobart Molson, M.C.

In pursuance of the established policy of the board, relief was given to those entitled to benefit from the fund on account of illness, death or other emergency not provided for through other channels.

Cases may be presented to the trustees for consideration from any source, but it has been found very desirable to obtain them through recognized returned men's organizations, as in this way the information necessary before grants can be made is more easily obtainable, and it might be emphasized

that this Trust Fund cannot be disbursed without the fullest information, and and as so many cases are ones of emergency, it is essential that information should be available promptly.

It will be noted that the fund itself has not been called upon for any expense of administration, the reason being that the provincial government has placed in the hands of the trustees the necessary funds to meet all expenses in connection with disbursement of the Canteen Fund; whilst, as far as the trustees are concerned, they serve without remuneration and travel at their own expense.

The trustees wish to express their appreciation of Brig. General E. W. Hilliam, C.B., C.M.G., D.S.O., who, following the death of the late secretary, Col. F. A. Robertson, acted as honorary secretary for the balance of the year.

The following is a statement of account:—

Investments 1-4-29.....	\$ 213,225 95	Overdraft 1-4-29.....	\$ 1,584 61
Interest.....	9,495 33	Relief.....	36,267 72

MANITOBA

Trustees:

Brig. General R. W. Paterson, C.M.G., D.S.O., Chairman.
 Brig. General H. M. Dyer, C.B., C.M.G., D.S.O.
 Lt.-Colonel the Rev. G. A. Wells, C.M.G., M.A.

During the year under review the Manitoba Board of Trustees has continued the policy previously adopted, viz:—

- (1) Assistance (in special cases) in the education of the dependents of ex-service men.
- (2) Assistance in urgent cases among ex-service men, their widows, orphans and dependents resulting from sickness, operations, etc.

At the end of June, 1929, the arrangements for carrying on the investigation work were changed and a separate investigation office was established by the trustees. The result has been found satisfactory. Certain expenditures for equipment, etc., made necessary by the change, should not be repeated during the life of the fund.

As a consequence of the prevalence of unemployment it was necessary to relieve many cases of great distress. In giving this relief the trustees have kept in mind the fact that a job is worth more than monetary assistance, and their investigator has in many cases been successful in securing work for these men and thus re-establishing them on an economic basis.

The educational work of the fund continues to meet a very real need. All deserving and promising cases are being helped as far as possible, at the university, in business colleges and high schools in preparation for their life work, and the results are highly satisfactory.

The following is a statement of account:—

Investments, April 1, 1929.....	\$ 224,445 76	Relief.....	\$ 18,061 17

PRINCE EDWARD ISLAND

Trustees:

Major E. H. Strong, M.C., Chairman;
Major Dan. F. Tierney;
Capt. Wm. A. McLaren.

The Prince Edward Island Board of Trustees reports that assistance has been rendered, in accordance with the provisions of the Act, to ex-members of the forces and their dependents, for relief in cases of distress.

The amount shown in the statement, namely \$15,500, which forms the assets of the fund, is on deposit with the provincial Government and by arrangement with the provincial treasurer the required amounts are withdrawn from time to time and deposited in the bank, a new deposit receipt being issued to the board after every withdrawal.

The following is a statement of receipts and expenditures:—

Investments, 1-4-29.....	\$ 16,500 00	Relief.....	\$ 2,104 00
Cash on hand 1-4-29.....	537 22	Administration.....	79 58

SASKATCHEWAN

Trustees:

Capt. A. H. White, Chairman;
Dr. Charles G. Cox;
Lt.-Col. James McAra.

During the fiscal year under review the Saskatchewan Canteen Fund Board has followed the previous policy of giving financial assistance either in the nature of loans or grants, each case being thoroughly investigated.

A considerable amount has been donated along educational lines, making it possible for soldiers' dependents to receive commercial courses and high school education which otherwise could not have been undertaken.

It has become evident that as the time goes on the demands on the fund will be considerably increased due to ex-soldiers who, while at present in apparent good health, may find themselves "burnt out" at any time. The trustees therefore feel that it is important that the fund should be conserved as far as possible to meet such conditions in the future without, however, neglecting at the present time those cases which after investigation are found to be deserving of assistance.

The trustees wish to express their appreciation of the co-operation they have received from the Saskatchewan Division of the Canadian Red Cross and Saskatchewan Command of the Canadian Legion of the B.E.S.L.

UNITED KINGDOM

The Canteen Fund in Great Britain is administered by the United Services Fund in accordance with the regulations under which the British Canteen Fund operates.

A considerable number of deserving cases were looked after and assisted through this fund, in matters pertaining principally to children's education, hospital maintenance and care of convalescing children of Canadian ex-service men in the United Kingdom.

The following is a statement of receipts and expenditures:—

1929

UNITED STATES

The Canteen Fund in the United States is administered by the American Red Cross.

Only the ex-members of the Canadian Expeditionary Forces who served in France or England, or the Royal Canadian Navy overseas may be assisted from this fund.

This assistance is given by means of grants and loans which are made by the different chapters of the American Red Cross.

The chapter's own funds are used in all transactions. Chapters are reimbursed immediately for grants made. Loans are usually carried by chapters for about six months before being presented as uncollectable. If at the end of that time the chapter's efforts to collect from the beneficiary have failed, reimbursement may be sought from the Canteen Fund through National Headquarters. However, if the veteran has repaid even a small part, or shown evidence of a desire to do so, he is given an extension of time and the chapter withholds request for reimbursement from the fund.

National Headquarters continues to retain absolute control of the fund by reserving the right to disallow reimbursement of any loan or grant made to an applicant who does not fully meet the eligibility requirements. Chapters are instructed to verify a man's service and otherwise establish his eligibility before advancing any material assistance from the fund. If money is advanced to an ineligible applicant, the expense of the loan or grant is met from the chapter's own funds.

A comparison with last year's report shows that there has been a considerable increase (22) in the number of cases reported from the Eastern area during these twelve months, and a somewhat larger decrease (28) in the number from the Pacific area. The number of cases in the Midwestern area has remained practically the same—one less having been reported than during the previous twelve months.

The following is a report showing the status of the fund since the last report:—

Balance in fund 31-3-29.....	\$ 43,500 91	Uncollectible loans, 1-4-29 to 31-3-30\$	983 87

BOARD OF PENSION COMMISSIONERS FOR CANADA

Colonel the Hon. MURRAY MacLAREN, C.M.G., M.P.,
Minister of Pensions and National Health,
Ottawa, Canada.

SIR,—Pursuant to the provisions of section 4 (2) of chapter 157, Revised Statutes of Canada, as amended by chapter 18-19 George V, I have the honour to submit a report of the work of the Board of Pension Commissioners for the fiscal year ending March 31, 1930.

Your obedient servant,

W. E. DEXTER,
for Secretary.

OTTAWA, October 16, 1930.

STATISTICAL REVIEW

LEGISLATION

No new pension legislation was enacted during the fiscal year ending March 31, 1930.

BENEFICIARIES

There was a slight decrease in the number of dependent pensions awarded during the period under review, whereas disability awards increased by 2,376. The number of disability and dependent pensions in force as at March 31, 1930, was as follows:—

Disability.....	56,996
Dependent.....	19,644
Total.....	<u>76,640</u>

The total number of persons receiving benefits under the Pension Act as at March 31, 1930, was 202,842, representing an increase of 7,600 over the total for the preceding fiscal year.

LIABILITY

The total liability in respect of pensions under the Pension Act for the fiscal year ending March 31, 1930, was \$37,802,510, which is an increase of \$617,202 over the liability for the preceding fiscal year.

MEDICAL EXAMINATIONS

The number of medical examinations for pension purposes carried out during the fiscal year was 25,697, as compared with 26,881 for the preceding fiscal year.

Detailed information of the board's activities and expenditure in connection therewith will be found in the statistics appended as compiled by the Department of Pensions and National Health.

THE FEDERAL APPEAL BOARD

OTTAWA, September 30, 1930.

Col. the Hon. MURRAY MACLAREN, C.M.G., LL.D., M.D., M.P.,
Minister of Pensions and National Health,
Ottawa, Ont.

SIR,—In accordance with the provisions of the Pension Act I have the honour to submit herewith a report of the work of the Federal Appeal Board for the fiscal year ending March 31, 1930.

I have the honour to be, sir,
Your obedient servant,

C. B. TOPP,
Secretary.

REPORT OF THE FEDERAL APPEAL BOARD

Covering fiscal year ending March 31, 1930

During the twelve months ending March 31, 1930, the work of the board proceeded along similar lines to the period covered by the previous year's report. A steady increase in the number of appeals received each month was noted and although the board progressively increased the number of cases dealt with daily at its sessions, the end of the year showed an increase in the total of appeals awaiting hearing as compared to the previous year.

Four thousand two hundred and twenty-two appeals of all classes were received during the year. This was an increase of 1,138 over the previous year, or 36·9 per cent. In the same period the board heard 2,873 appeals, this figure being an increase of 978, or 51 per cent over the number dealt with during the twelve months preceding.

An increasing proportion of the claims placed before the board were found to be within its jurisdiction, and of the total received during the year only 155 were cases which could not be heard by the board owing to the provisions of the Pensions Act which limited the class of cases which could be heard. Two hundred and sixty-seven daily sittings were arranged at different centres throughout the Dominion and as in previous years these sessions took place at points from coast to coast.

Quorums of the board were absent from Ottawa during the year more than 300 days and travelled approximately 28,000 miles in the course of their duties, or a total of approximately 112,000 miles if the aggregate of travel by each member of the board is considered. The policy of hearing appeals in the presence of appellant in his own locality was continued although a number of sessions were again held at Ottawa to deal with appeals in which the appellant desired a decision rendered without appearing in person. Nearly half of the total of appeals received during the year again were received from Ontario.

SECOND APPEALS

Second appeals, made possible by the provisions of section 51-5 R.S.C. 1927, continued to be entered, and during the year many such cases were received. To date 567 second appeals have been entered, of which 56 were allowed, 265 disallowed, while 5 are still pending judgment.

MERITORIOUS CASES

Up to March 31, 1930, a total of 456 applications have been submitted for consideration under section 21 of the Pension Act which has to do with the award of pensions in cases regarded as specially meritorious by a Special Tribunal composed of two members of the Board of Pension Commissioners and two members of the Federal Appeal Board. Of these applications 29 awards have been made under this section.

IMPERIAL CASES

The board continued during the year to examine Imperial appellants on behalf of the Imperial Pensions Appeal Tribunal and during the year examined and forwarded recommendations in 37 such cases.

EXPENDITURES

The amount voted by Parliament for the work of the board was again \$130,000. Details of the expenditures appear in the report of the Department of Pensions and National Health.

Following are statistical statements covering the work of the board to date:—

	Halifax	Saint John	Charlottetown	Quebec	Montreal	Ottawa	Toronto	London	Winnipeg	Regina	Calgary	Vancouver	Victoria	Totals

NATIONAL HEALTH DIVISION

FOOD AND DRUGS DIVISION

This was a year of progress in the Food and Drug Division. The major part of the work was, as heretofore, the administration of the Food and Drugs Act with inspection aid and analytical services for the Proprietary or Patent Medicine Division, with laboratory work for the Narcotic Division, for the Department of Agriculture and other departments of Government.

Steadfast adherence to the fundamental principles upon which the policy of administration was based has maintained a measure of protection to the purchasing consumer of foods and drugs in a time when inducements to the practice of adulteration and misbranding are strong because of keen competition. In these days when industrial changes are so numerous with the advance of science and its application to industry, it is sometimes difficult to safeguard the interests of the consumer and to prevent the over-exploitation of new, immature discoveries about which may be woven a spell of romance. False or exaggerated claims were never more profitable. The truthful label is one of the most important forces in combating this evil, and a persistent effort is made to see that food and drug packages are properly marked.

INSPECTION SERVICES

Twenty-six inspectors, distributed at strategic points, collected 12,287 samples for analysis in the laboratories. This, by no means, represents all the work done; in fact, the stocks and shipments of goods examined were many times greater in number. With a full round of duties including inspections not only of goods on sale, but of importations, with interviews, correspondence and prosecutions, these officers had a busy year. Prosecutions numbered 91, as follows: cream of tartar 1, cocoa 3, flavouring extract 1, drugs 1, maple products 9, meats 51, pepper 8, soft drinks 17. The sum of \$10,022.30 was collected in the fees for analysis, fines and costs. These prosecutions represent only the last recourse in dealing with wilful and persistent breaches of the Act after explanations and warnings have failed. In the figures quoted, the large number for meats was due to the colouring of sausages and the addition of chemical preservatives. Saccharine in soft drinks has also been the cause of numerous prosecutions.

LABORATORY SERVICES

The laboratories maintained at Halifax, Montreal, Ottawa, Toronto, Winnipeg, and Vancouver are for regulatory purposes, not for research. Original investigations of scientific problems are undertaken only when the demands of law enforcement render the development of new methods indispensable. The following table shows the number of samples examined in routine:—

SAMPLES EXAMINED IN THE FOOD AND DRUG LABORATORIES

Nature of samples	Laboratories					
	Ottawa	Montreal	Vancouver	Winnipeg	Halifax	Toronto
From Inspectors of Food and Drugs....	1,683	1,612	4,201	1,862	1,144	1,784
Department of Agriculture.....	471	699	410	123	24	86
Royal Canadian Mounted Police (narcotics).....	24	92	118	23	13	27
Other departments of Government.....	136	1	204	100	22	1
Miscellaneous.....	33	32	4	10	8	
Totals.....	2,347	2,436	4,937	2,118	1,211	1,898
Grand total.....	14,947					

It must be remembered that, like all statistics, these figures must be interpreted with caution and only in the light of understanding. Every analysis is undertaken with a purpose, and it is contrary to policy to make tests and accumulate figures if no use can be made of them when they are assembled. Some analyses are simple, other exceedingly intricate requiring expensive equipment, skilful operation, and the time may not be a few minutes but extend to a week or more. An analyst engaged in this work is in a rather trying position, as his certificates are subject to dispute in the event of the owner of goods seized or detained, deems himself aggrieved and engages an analyst to check up the findings of the Government laboratories. The Dominion analysts are to be congratulated on the fact that in no instance this year was a certificate controverted.

Some of the more important articles of food receiving attention are mentioned in the following tabular summary (see table A) of samples examined. It is to be noted particularly that these samples of any commodity do not represent the entire market, as they are taken mainly from stocks under suspicion. In practically every line there are well-known brands of superior quality. Multiple analyses of such products are not warranted. The money, time and energy so expended is better devoted to the investigation of food merchandise of doubtful purity and incorrect labelling.

Alimentary Pastes.—The highest grades of macaroni and noodles are made with egg, and of a light yellow colour imparted by the egg-yolk. All possible encouragement should be given to the development of such quality products. Objections have been raised against the use of dye to conceal inferiority or to enhance the value of cheaper products.

Baking Powder.—Complaints regarding deteriorated stocks were fewer than in previous years. Possibly the more rapid turn-over in grocery supplies has been the improving influence. Baking powder low in gas-producing properties is removed from the trade wherever found.

Beans.—Whenever there is a shortage in domestic supplies of beans, importers turn to other countries, especially to Asia, and bring in very large shipments. These come through the port of Vancouver. The special feature to be observed is the possible production of hydrocyanic acid when heated with water. Unless the Rangoon bean is very carefully cooked there is danger of poisoning. A number of cases in Canada some years ago directed attention to this hazard. The Asiatics may know how to prepare such beans, but for us, the only safe procedure is to refuse entry of shipments that may be dangerous. Only one consignment was rejected this year.

Beverages.—Beverages are always a problem from the regulatory standpoint. Companies operating on a small scale are continually starting up with something new, and begin without paying attention to the requirements respecting labelling, the use of preservatives, dyes, etc. The use of saccharine as a sugar substitute has been detected in a few instances. Of the seventeen prosecutions arising from the adulteration or misbranding of soft drinks, four were because of the persistent and wilful use of saccharine. Import shipments of fruit juices were carefully inspected. Part of the world trade in concentrates is free from adulterants and there is no reason for special tolerance in permitting excessive proportions of chemicals, such as sulphites, in the output of any country. Chemical preservatives should not be used in any food if the trade can possibly function without them.

Breakfast Foods and Special Cereals.—In these products the labelling has been checked and, except for damage by insect infestation, no adulteration was found. As a general rule, the purchasing consumer receives poor value for his money, but seems willing to pay high prices for convenience in preparation for the table, because if the main consideration were the maximum of nutriment with minimum expenditure, this industry could not thrive.

Butter.—The majority of samples analyzed were for the purposes of the Dairy Industry Act. In spite of penalties imposed, adulteration is still found occasionally. Not only is there a profit to be derived by working the butter to excess water content, but the admixture of other fats is tempting to processors. Imported butters were found to contain no borie acid.

Cheese.—The changes in market conditions owing to the introduction of processed cheeses made from a cheddar base with the addition of emulsifiers have necessitated supervision of labelling. Cheese containing less than 45 per cent fat calculated on the moisture-free basis, is in general well labelled as skim-milk cheese. In the softer cheeses there is some need for a standard specifying maximum water content.

Cocoa Products.—Inspection was made of many import shipments of cocoa beans. The raw material shows improvement in quality, but the same cannot be said of the manufactured products. It was a great surprise to find on the market prepared cocoa containing but a fractional percentage of fat, an admixture with starch and faced with very finely ground iron oxide. Seizures were made, penalties exacted, and it is believed that the market has been cleared. Considerable work was done with a view to fixing standards of quality. Extraction processes have become so highly developed that there is a tendency to make the cocoas very low in fat.

Coffee, Coffee Extracts and Coffee Substitutes.—Abundant supplies of good coffee have apparently lessened the demand for substitutes. The decaffeinated coffees were found to meet label claims. Misbranding in a coffee essence was corrected.

Confectionery.—Candy and biscuits were examined particularly for non-permitted aniline colours. Numerous import shipments were refused entry.

Cream of Tartar.—This compound is used not only in the manufacture of baking powder, but also in simple combinations with soda suitable for the domestic kitchen or the small bakery. There is some difficulty in keeping clear of arsenic and other contaminating impurities.

Figs.—There has been a most remarkable improvement in the quality of figs coming to the Canadian market. A few years ago it was necessary to admit a tolerance of 35 per cent defectives (wormy), if we were to have any figs at all. Even on that basis many shipments were refused entry. No doubt this inspection had a corrective influence resulting in improved condition at sources of production. This year the tolerance of defectives was lowered to 10 per cent, and even with this strict standard, only five shipments in 178 were rejected.

Fish and Shell-fish.—Watering oysters is all too common in the retail trade. As a result of numerous analyses it has been found that there is no occasion for the drainable fluid from shucked oysters exceeding 10 per cent. A standard will be developed on this basis.

Flavouring Extracts.—Samples examined showed improvement in quality when compared with those collected in other years. Several found adulterated emanated from one source. It is hoped that the resulting prosecution will have a wholesome effect.

Food Colours and Preservatives.—Conditions in these commodities show advancement, with less than 7 per cent of the samples misbranded. The aniline colours permitted in foods would meet the needs of the trade very well if a good blue could be added to the list. Work now in progress indicates that Brilliant Blue will prove satisfactory.

Fruits, Dried (other than figs).—Shipments coming to Canada are of better quality. Practically all consignments are examined for sulphites. Three large shipments were refused entry because of the presence of excess preservatives.

Fruits, Fresh.—It may be that the absence of frost damage at the citrus groves lessened the number of detentions necessary to maintain quality in imports. Five hundred shipments of oranges were found clear without one rejection. Four shipments of grapefruit, one of pears, six of peaches, and two of cherries were refused entry.

Honey.—Honey is free from adulteration, but there is difficulty in securing compliance with the act in the matter of properly marking contents. Weight should be given as *net* weight—not gross. The consumer must pay for the container, but a five-pound pail of honey, for example, should contain five pounds of honey. This was clearly the intent of section 7 (f) of the Food and Drugs Act. It is expected that as a result of the steps taken in an educative way, this situation will gradually improve.

Jams, Jellies, and Marmalades.—These fruit products have been investigated for the purposes of standardization. In the course of time a very undesirable condition has resulted not only from the standpoint of the purchasing consumer, but also from that of the trade. The misuse of the word “pure” in labeling a filled product, artificially coloured, is a practice to be condemned. In fixing standards, two guiding principles will be observed. A pure jam should be made from fruit and sugar only, and with modifications bringing in pectin preparations, dyes and preservatives, the label should give a truthful description. The purchaser is entitled to the opportunity of obtaining that information. The regulations now promulgated do not prohibit the manufacture of the cheaper grades of jam, but do demand that they shall be sold for what they actually are.

Meat and Meat Products.—Numerous prosecutions have been necessary because of the persistent and wilful use of dyes and chemical preservatives, such as sulphite, in sausage and comminuted meats, such as Hamburg steak. These forms of adulteration are pernicious. Not only are the products so treated made to appear better or of greater value than they really are, but incipient putrefaction may be disguised. The inspectors endeavour to inform all manufacturers and dealers concerning the requirements of the regulations, and then to see that there is proper observance. Action will be taken wherever adulteration is detected.

Salt.—Table salt is not regarded as adulterated if iodide has been added and the label so states. This principle was decided years ago, when iodized salt was first advocated for the prevention of goitre. Undoubtedly there is some connection between iodine and the thyroid gland, but the exact relationship has not been settled in a mathematical way. Authorities seem to agree that a salt slightly iodized is a convenient preventive agent, the slight damage done to a very small percentage of consumers actually goitrous being greatly overbalanced by the good done by preventing goitre in thousands of individuals. Just how much iodide or how little is required cannot be declared with certainty. Evidently it is very small.

In these circumstances all that could be done was to estimate the iodine in samples and see that the composition of the iodized salt as sold was reasonably close to the label claims. In sixty samples examined, a few discrepancies were noted, but the errors were not regarded as serious. There are difficulties in the way of incorporating a very small proportion so that the product is homogeneous.

Vinegar.—The quality of the malt and cider vinegars on sale is now better than ever before in Canada. This improvement is due to the disappearance of spirit vinegars coloured with caramel or burnt sugar.

DRUGS

During the year under review, over six hundred pharmacopoeial and kindred drugs were examined, as well as some seven hundred imported medicines and nearly three hundred samples of narcotics. Many samples in the first group

represent special surveys and investigations of particular drugs and preparations, but the majority are routine in character, presenting certain features that may well be noted.

Anæsthetic Ether.—Anæsthetic ether has presented one of the features of the year's work. Quite independently of any popular anxiety which has found expression in the public press, but primarily in fulfilment of the responsibility laid upon the division, a very exhaustive survey of ether for anæsthesia as used in hospitals throughout Canada has been made, all of the larger institutions having been visited by our inspectors, who have taken samples and investigated the system of purchase and conditions of storage. The samples have been submitted to an exhaustive analysis, including, in addition to the tests of the British and American Pharmacopœias, certain very sensitive reactions designed to detect very small amounts of impurities, so as to render possible a classification according to quality. On the whole, these samples have passed the ordeal very creditably. The survey comprised some 257 packages, representing nine different brands. The two leading varieties constituted 93 per cent of the whole collection. Classifying these two together (A), and the remaining seven by themselves (B), the results may be summarized thus:

Quality	Number of samples	
	Leading brands (A)	Smaller groups (B)
Very good	37	2
Good	50	1
Satisfactory	114	2
Just passable	29	3
Inferior	8	11
	<hr/> 238	<hr/> 19

Two brands with only a small distribution have been eliminated from the market and replaced in the institutions concerned by those of Class A; stocks of a third were seized and diverted from their original purpose; while in the case of a fourth, the manufacturers were cautioned. Strangely enough, these inferior brands were not in use when fatalities occurred; the ether used in fatal cases submitted to the Department, proved above reproach.

One feature, however, stands out in bold relief, and that is the gradual improvement in this substance that has taken place during recent years. In 1929-30 about eight per cent of the samples were inferior, compared with 65 per cent in 1925-26, and 25 per cent in 1927-28.

A study of the stability of ether under various conditions of storage revealed that ether is preserved best in hermetically sealed cans with exclusion of air and light. Bottles are not satisfactory. Moreover, it was observed that ether begins to deteriorate within a few days of opening; hence ether intended for anaesthesia ought not to be carried over in opened cans from day to day or from week to week. The ideal should be to use cans no larger than the average day's consumption.

Blue Ointment.—A preliminary survey of 11 samples of this ointment was made in the Ottawa laboratory during the year. The results covered a very wide range—from 6.8 to 44.8 per cent of mercury, instead of 30 per cent, as required by the British Pharmacopœia. Four showed reasonable compliance with this standard. One difficulty exists in the multiplicity of formulæ. The name "Blue Ointment" is in general use throughout the drug trade as a synonym for mercury ointment, although not officially recognized as such. But the Pharmacopœia of the United States does apply this name to an ointment containing 30 per cent of mercury, and the British Pharmaceutical Codex to one containing only 10 per cent.

Boric Acid Ointment.—Boric acid ointment is neither difficult to prepare, nor costly, nor liable to deterioration if properly stored, so there is little excuse for strengths such as 6·7, 4·9, 4·5 or 3·7 per cent instead of 10 per cent of boric acid.

Camphorated Oil.—This preparation has received a good deal of attention during the past year. Seventy-three samples showed an average content of 19·2 per cent of camphor; of these, 16 were deficient and one contained as much as 25·7 per cent of camphor instead of 20 per cent. Only 8 were prepared with olive oil as base, 2 with arachis oil, and the remaining 63 with cottonseed oil. Hence only 10—if of full strength—could correctly be labelled “B.P.” The use of cottonseed oil is sanctioned in the United States, but druggists must be careful to add the reference “U.S.P.” to the name, if that base has been used. This point appears to have been overlooked in a number of instances and has necessitated the cautioning of vendors by our inspectors. It is also necessary to remind druggists of the provisions of section 7 (f) of the Food and Drugs Act, which demands a statement of net contents upon the main panel of the main label where the gross weight is over two ounces. Figures blown in the glass of the bottle upon either bottom or sides are not deemed sufficiently conspicuous to comply with the Act.

Elixir Potassium Bromide.—This is a typical member of a group of preparations that presents some difficulty in the administration of the Food and Drugs Act. They are sold more or less as specialties, with a part formula on the label listing the amounts of the active ingredients. They do not appear in the pharmacopoeias although some are mentioned in standard works, but it would seem that the intention of the Act is being evaded by the presence of a formula on the label. Elixir of Potassium Bromide as a rule contains 80 grains of potassium bromide per fluid ounce, and this is all the information supplied by manufacturers. Hence variations in colour and flavour are to be expected. A survey of 48 samples made in the spring of 1929 revealed a commendable uniformity in potency. But the colours varied greatly; some were colourless, some deep red, others purple, cherry red and orange. One chain store furnished three samples, one colourless, one cherry red and one purple. It is liable to prove disconcerting to receive two of these as the same medicine. It is confidently anticipated that the new Canadian Formulary, presently in course of preparation, will exercise a controlling influence upon such undesirable variations.

A still more serious matter is the ready substitution of elixir of sodium bromide, of triple bromides, and in one case of five bromides, in place of elixir of potassium bromide.

Ethyl Chloride.—Recent fatalities during anaesthesia caused suspicion to fall on ethyl chloride as being responsible for the trouble. This led to a survey of available supplies. The collection consisted of ten samples of English, American and German brands. It is a pleasure to be able to testify to the excellence of every one of these; all were entirely satisfactory. Fortunately the conventional packing in an ampoule with a patent spraying nozzle furnishes an ideal protection against deterioration.

Fowler's Solution.—Samples of this preparation taken in the Province of Quebec did not show up as well as those reported last year. Of twenty-two samples tested in the Montreal laboratory, only nine contained between 0·95 and 1·05 per cent of arsenious oxide, while two stocks containing 0·039 per cent and 0·084 per cent, respectively, were ordered to be destroyed. There is no excuse for so great a deficiency.

Hydrogen Peroxide.—Hydrogen peroxide figures largely in the annals of the last fiscal year. Not only is this article open to criticism in the matter of strength, but fault has also been found with the labelling. There is plenty of room for improvement in quality. The average content of hydrogen dioxide

in the samples examined was 2.69 per cent, which does not compare favourably with an official requirement of 3 per cent. Close upon 50 per cent were below the minimum limit set by the British Pharmacopoeia, but none exceeded the official maximum. A number also presented evidence of excessive amounts of free acid.

Likewise, the labelling calls for some comment. Eighteen specimens of different brands were purchased and the labels studied. Eight had contents stated, ten had not; nine carried declarations as to preservatives and nine did not, notwithstanding the fact that the use of such substances in hydrogen peroxide is virtually universal. Again, some packages were over ten years' old. Manufacturers have been advised individually by the inspectors of the legal requirements as to statement of contents and, in the majority of cases, have governed themselves accordingly.

Imported Medicines.—The policy of inspecting importations of medicines at the ports has been continued with great benefit to the people of Canada. Hundreds of shipments have been refused entry on account of failure to comply with the law respecting labelling. Many of these did not bear a statement of contents, while others contained, on circulars and labels, false and exaggerated therapeutic claims which serve only to mislead the purchaser.

Narcotic Drugs.—The analysis of 298 samples of narcotics in the course of the year demanded very careful work. Not a certificate was found erroneous.

Nux Vomica Preparations.—The improvement noted in this group last year has been maintained. Ten tinctures were examined, two of which were deficient in strychnine—one was slightly low, the other 60 per cent below strength. On following up the latter, it was ascertained that the makers had carried out the pharmacopoeial instructions in detail, using liquid extract they had purchased in good faith from a firm of wholesale druggists. This liquid extract was found proportionately deficient and was ordered destroyed.

Seidlitz Powders.—Seidlitz powders also have improved during the past year. Our chief criticism, however, is based on the failure of the trade to mark on the package, correctly and conspicuously, as required by the Act, the number of doses.

Spirit of Camphor.—Spirit of camphor, on the whole, has been well up to strength with respect to camphor. It is noted, however, that in two-thirds of the samples, the percentage of alcohol was slightly in excess of that necessary.

Sweet Spirits of Nitre.—During the period under review, a good deal of effort has been put forth to ensure the maintenance of satisfactory material both by Ottawa and the branch laboratories. Samples containing as little as 0.24 per cent and as much as 3.12 per cent of ethyl nitrite have come under notice. Exceptionally poor material was disposed of by destruction, while other substandard material has been detained until put right. Twenty-four per cent were below strength, nine per cent above permissible limits, and the remainder averaged 2.37 per cent of ethyl nitrite, which compares well with the official range of 1.52 to 2.66 per cent. This is slightly better than in the previous year.

Syrup of Ferrous Iodide.—This preparation is still being sold under strength. Our records indicate an average content of 4.07 per cent of ferrous iodide, instead of 5 per cent. The majority of samples examined in the past year were collected in the maritime provinces and were all substandard. It is the iodine which dominates the situation during manufacture, and unless manufacturers are careful to keep the chemical reaction between iron and iodine under good control, the latter will be lost by volatilization. Herein lies the probable explanation of the deficiency.

Zinc Ointment.—So far as medication goes, there is little fault to find with zinc ointment. The average percentage of zinc oxide in the samples dealt with works out at exactly 15.0—precisely that prescribed by the British Pharmacopoeia. But in no fewer than eighteen out of twenty-six cases has the official benzoated lard base been replaced by petrolatum and hence only eight samples, representing 31 per cent of the collection, can be considered genuine. It is freely admitted that benzoated lard is not as permanent a vehicle as the higher hydrocarbons and that it may be replaced in the edition of the British Pharmacopoeia now in course of preparation, but if manufacturers prefer to put up for general distribution a zinc ointment they can guarantee will not become rancid, they should adopt the United States formula and label the product accordingly.

Drug Preparations Sold Under Distinctive Names.—These may be divided into two groups—one registered under the Proprietary or Patent Medicine Act, the other with label declaration of medicinal ingredients. There are certain diseases in which self-medication should not be attempted. Sufferers from cancer, tuberculosis, goitre, diabetes or diphtheria should not be misled by romancers who would, to their own profit, advertise and sell remedies of no established value.

The task of applying these principles to the inspection of preparations coming from Europe has demanded sustained effort. It is felt that, in spite of numerous controversies, results are worth while, as the public have been protected from many worthless frauds.

There was but one prosecution under this heading this year. The court dealt very promptly with the defendant who exploited a wonderful system of treatment for all sorts of diseases by fumigating the patient, claiming thereby to be adding iron to the blood and otherwise achieving that which was absolutely impossible.

The plan for next year provides for the continuation of all these lines of endeavour.

NARCOTIC DIVISION

During the period under review the narcotic situation in Canada unquestionably continued to improve. Many traffickers, particularly on the Pacific Coast, were incarcerated, and by the best barometer available, that of price, illicit narcotics continued to be difficult to obtain. So long as quantities vastly in excess of those required for the world's medical needs continue to be manufactured, however, for just so long will Canada, which does not manufacture, but imports as required, be compelled to spend considerable money and energy in combatting the illicit traffic. It is earnestly hoped that an eventual control of world manufacture will be achieved, an objective at which the League of Nations is now aiming.

Canada makes no secret of the fact that narcotic addiction is prevalent within her borders, and it is estimated that some eight thousand citizens are so addicted, but it is not generally realized that these numbers fall within several very distinct categories. There are certain unfortunate people who, by reason of a medical condition which absolutely requires narcotics to be administered by a medical man, eventually develop an addiction which requires increasing quantities of narcotics to cope with such medical condition and addiction. In such instances there can be nothing but sympathy for the persons concerned, and usually the medical condition itself eventually terminates the case. Then there is the person who, occupying a decent position in the community, becomes an addict from a variety of causes, such as over-work, nervous strain, dissipation, or the appetite remaining after receiving narcotics for a medical condition which no longer exists. In such cases it has been found that where the person concerned has *something to lose*, such as family ties or the right to practise a

profession, much can be done *after* the withdrawal of the drug has been effected, and the opportunity exists to weigh carefully against the remaining appetite the serious consequences which will inevitably accrue if reversion again occurs. Cases such as these, and they are unfortunately only too frequent, are naturally dealt with in the strictest confidence, but I am glad to be able to report that so far definite success has been achieved in a number of cases, which naturally affords the greatest pleasure to those controlling the use of narcotics, whose other activities in that regard are, of necessity, frequently very depressing. The greatest credit, however, belongs to the medical profession, many members of which, when given opportunities along the lines mentioned above, co-operate to a remarkable degree, and in a surprisingly large number of cases with little or no prospect of material reward. This Department is quite prepared to definitely state that in cases where there is no underworld association, and the person involved is in a position where a continuance of the narcotic habit will involve serious social, professional or pecuniary consequences, there is every reason to hope that a proportion of cures can be effected, although naturally a number will revert. Some of the cases initiated by, and known to us, have been completely free from addiction for over two years, although it is considered that a period of five years should elapse before any definite claim to permanent cure is made.

Then there is the underworld type of criminal addict, who spends a considerable proportion of his life in jail, either on narcotic charges or for other crimes usually committed in an endeavour to maintain a supply of the drug of addiction at the high prices now obtaining. For these cases there would appear to be no present solution, as the social environment occasioned by association with other addicts, both in jail and after the sentence is served, affords an opportunity of continuance in addiction which is taken full advantage of, and our efforts would apparently be best directed in preventing, so far as is possible, addicts, who are now respectable members of society, from descending, as is so often the case, into the category of criminal addicts. The latter constitute a most dangerous menace to society, and it is unquestionable that drug addiction, in its relation to most of the more serious crimes of the present day, is a very serious problem indeed from a police standpoint in practically all urban communities.

A great step in advance would be made if all provinces were to pass legislation, as Alberta has done, giving power to commit addicts for treatment and provide same, not necessarily in a central institution, but in local hospitals if and when control of the patient is possible. Nova Scotia some years ago passed legislation on the subject, which has not been amplified by the provision of accommodation, and in Ontario, while the provisions of the Mental Hospitals Act apply to drug addicts, the machinery is certainly not utilized to anything like the extent obviously necessary if the problem of drug addiction is to be seriously handled. In February, 1929, however, a committee of the Ontario Medical Association met the Premier of that province, and impressed upon him the

"urgent need for provision of a public institution, government controlled, for compulsory segregation of addicts to be placed under proper medical treatment therein,"

and as is well known a Royal Commission was appointed by the Ontario Government to study, amongst other matters, this problem, although the report of such commission is not yet available. However, until provincial action is taken of a reasonably uniform nature, the question of drug addiction cannot fail to constitute a serious menace to the well-being of this country.

The number of cases of attempts on the part of addicts to obtain narcotics from legal sources by illegal methods, such as thefts, hold-ups, impersonation of physicians over the telephone, etc., cannot be said to be decreasing, although it is, of course, a good indication of the comparative scarcity of illicit narcotics.

In one city, where numerous arrests of traffickers and exemplary sentences by the courts had rendered narcotics unobtainable in the underworld, the medical profession was very shortly thereafter inundated with requests for supplies or cures, not necessarily bona fide, as several arrests of addicts for obtaining narcotics from more than one physician were necessary, as also considerable correspondence along certain lines, before it became clear that this Department had no intention of permitting the physician to unconsciously replace the convicted drug trafficker as a source of supply, even if his sympathies were being played upon as compared with the less worthy motives previously involved.

During the 1929 session of Parliament the Opium and Narcotic Drug Act was revised and consolidated, in the course of which it was referred to special committees of both Houses of Parliament, which afforded an excellent opportunity to explain the methods which were being followed and progress made. As a result a greatly improved Narcotic Act was eventually passed, which has been referred to by the Crown Attorney of Toronto in an annotation thereof (Canadian Criminal Cases, Volume 53) as follows:—

“From every point of view the statute now in force is an admirable piece of legislation, coherent and consistent, and well calculated to effectuate the object for which it was passed.”

The principal changes involved the addition of the lash, in the discretion of the judge, to the imprisonment provided for drug traffickers, and the addition of the offence of trafficking in substances held out or represented by the accused to be a narcotic. It was also made an offence, punishable by fine only, for a person to get himself supplied with narcotics or prescriptions therefor by two physicians at the same time, while no one, except members of the medical, dental professions, etc., can now send narcotics by mail. Provision is also made for the forfeiture of automobiles and other conveyances, as also money, used in connection with any narcotic offence.

In so far as the legal traffic in narcotics is concerned, the importations into Canada were not abnormal, and well within the estimate of our requirements furnished in advance to the League of Nations. Owing to Canada having ratified the Opium Convention, our statistics of imports and exports are, for the first time, prepared by calendar year, but when the figures for 1929 are compared with those for preceding twelve months' periods (see table 3), it will be noted that the importation of cocaine was well below the average of the three preceding years, and an importation of 2,180 ounces, as compared with 2,967 in 1927-28, 2,659 in 1926-27, and 2,633 in 1925-26, may be considered quite satisfactory, although the opinion expressed last year is repeated, namely, that we will not for some time reach the point where our annual consumption of this narcotic is less than 2,000 ounces. With regard to morphine and heroin, 7,025 ounces were imported, or nearly 1,000 ounces less than the average of the three preceding complete years, and 300 ounces less than the complete fiscal year 1928-29. In this connection it is interesting to note that the importation into Canada of codeine, a non-habit-forming drug, which is not covered by the International Opium Convention, is rapidly increasing. In so far as crude opium is concerned, the importation in the calendar year 1929 was 1,145 pounds as compared with 1,084 pounds in the fiscal year 1928-29. This opium was all legitimately used in connection with the normal legal trade.

There are, in Canada, one hundred and twelve wholesale licences issued annually to firms who import and export, manufacture or sell narcotics and preparations containing same, but each individual importation is covered by a separate licence which, in accordance with the terms of the International Opium Convention, must be also covered with an export licence from the country from which the purchase is made, and which latter is only issued after the production of Canada's import permit. In this way no country can have narcotics legally consigned to it without having granted prior permission. In addition to supplies

received from other countries, certain narcotics previously seized from illicit sources are sold to licensed wholesalers after passing the requisite standard of purity, and during the calendar year 1929, 310 ounces of cocaine, 305 ounces of morphine and heroin and 11 pounds of gum opium were so disposed of. The exportation of narcotics from Canada is negligible, consisting almost entirely of ordinary retail druggists' requirements despatched to Newfoundland, although the International Convention, involving export licences from Canada and import licences from Newfoundland is strictly adhered to in connection therewith.

During the period under review it was necessary to institute proceedings against two physicians and one retail druggist. In so far as the former were concerned, both cases involved the supplying of narcotics to individuals under conditions which were illegal, and substantial financial penalties were imposed, while in the case of the retail druggist, conditions affecting two drug stores were involved, and two fines of \$200 were imposed as penalties.

In so far as the illicit traffic is concerned, further progress was made in incarcerating the larger traffickers in particular, and in the twelve months ending March 31, 1930, the following are the principal sentences imposed: 2 of 7 years, 1 of 6 years, 10 of 5 years, 6 of 4 years, 7 of 3 years, 14 of 2 years and 31 of 1 year and over, while in the case of a second offender in Vancouver the lash was applied. This total of 174 years, as indicating the more important cases, compares with 158 years in the preceding fiscal year. When one remembers that there is a boundary line of 4,000 miles between Canada and the United States, it is obvious that the opportunities for illicit traffic are numerous. In addition there is, of course, the problem of importation from Europe on the Atlantic coast and from the Orient in British Columbia. Experience unquestionably demonstrates the wisdom not only of endeavouring to concentrate upon the detection of narcotics in process of being introduced into this country, but also upon the detection of the trafficker in the act of selling after introduction. If narcotics being smuggled are alone seized, the trafficker is free to continue his operations, and doubtless allows for a percentage of loss, whereas with a properly organized intelligence service, the influx of any considerable quantity of narcotics in any given community is very soon known, and the arrest and conviction of the owner or vendor thereof acts as a far greater deterrent than a mere seizure, and automatically prevents further trafficking in so far as those individuals are concerned. It should also be borne in mind that in the table of convictions printed herewith the number of cases of "selling narcotics" by no means represents the number of traffickers convicted. The penalties for possession are similar in range to those for selling or importing, and it very frequently happens that traffickers are charged with possession in circumstances where their guilt is obvious, rather than evidence being given of an actual sale, under conditions which would expose the persons working on the cases, and render future activities much more difficult.

Many of the smaller cases of breaches of the Narcotic Act, involving "deck peddlers", "opium smokers", etc., are handled by municipal and provincial police forces. These do not necessarily have to be reported to this department, although many of them are; consequently the only certain means of ascertaining exact statistics for Canada as a whole is to work in conjunction with the Dominion Statistician to whom all cases are reported by the courts for each year ending September 30. These are carefully checked with our records, duplications, etc., eliminated, and the result gives a very good yearly basis of comparison. In the year ending September 30, 1929, 567 persons were convicted, as compared with 430 in the previous year. Of these, 258 were federal cases, while the number of provincial and municipal cases was exactly the same as last year, namely, 309. There were 189 cases which involved the illicit sale or possession of narcotics, as compared with 227 the previous year, while 373 were in connection with opium smoking, possession of paraphernalia, etc., as

compared with 166. This large increase in connection with opium smoking is due to the increased activity of municipal officers in handling this type of case, and to certain Chinese investigations by federal officials, which incidentally brought to light the existence of opium smoking on a considerable scale in certain communities.

The most important occurrences from a federal standpoint during the year were the location in the United States of two long and badly wanted men, after searches on the parts of officers of both the United States and this country, extending over a year in one case and two years and a half in the other. Harry Astroff, for whom a warrant was issued in Montreal in 1926, in connection with the illegal possession of a very large amount of narcotics, was located on a race-track near New York, and waiving extradition, returned to Canada. After a bitterly contested and lengthy trial, the jury disagreed. Upon the second trial he was found guilty and sentenced to seven years in the penitentiary, but is now on \$30,000 bail pending the hearing of an appeal, which he has entered.

The other case was that of a Chinese trafficker in Victoria, named Wong Wa, who absconded after being sentenced to a penitentiary term, and while on bail pending the hearing of his appeal, which was dismissed. As in the Astroff case, it was felt that no effort or expense should be spared in bringing this man to justice, and he was in due course located in Chicago. Extradition proceedings, which were initiated, were strenuously opposed, as were also several applications for Habeas Corpus, but eventually Wong Wa was brought back to Canada and placed in the penitentiary to serve his term.

Another very interesting and important case from the opposite angle was the location in Vancouver of an important trafficker, who had jumped his bail in San Francisco. He was arrested and held for extradition proceedings, but was later given his freedom by the court on the ground that, while an undoubted *prima facie* case had been made out, the United States Federal Narcotic Act, known as the Harrison Act, was a revenue measure, and not a criminal statute, and therefore offences committed thereunder were breaches of a revenue law and not extraditable. This decision struck at the very root of the special Treaty between the United States and Canada providing for, amongst other things, the exchange of narcotic offenders wanted in either country; consequently another application for extradition was made to the Chief Justice of British Columbia by the United States authorities, with whom was associated counsel for the Dominion Government, and extradition was ordered in the following judgment:—

"The prisoner is charged with an offence which it should be to the common interest of all nations to suppress. That is conceded, and in order to support the demand for extradition from Canada, it is necessary to show that the offence is one of those enumerated under the Extradition Acts, also in the particular treaty and that the acts charged amount to the offence, according to the laws of both Canada and the demanding State, the State demanding the surrender, the United States. I find that the demand has been so supported and the prisoner, Sieman, will be delivered up to be sent to the State of California for the purpose of being tried, if so advised, where unquestionably he will get a fair trial, and the matter will be determined one way or the other."

A writ of habeas corpus was then applied for and refused, a further application for a writ of prohibition met with a similar fate, Sieman himself escaped from his place of confinement in Vancouver but was recaptured, and finally he was conveyed to San Francisco where he was sentenced to ten years in the penitentiary and a fine of \$5,000.

During the year 69 aliens, convicted of narcotic offences, involving six months' imprisonment or more, were deported, 59 of whom were Chinese. This brings the total of deportations, since the inauguration of the present policy in 1922, to 731, of whom 578 were Chinese.

In table 7, printed herewith, will be found tabulated the narcotics seized or received from illicit channels, included in which will be noted over 500 pounds of opium and nearly 125,000 heroin tablets.

In so far as the *Maritime Provinces* are concerned, very little trouble is experienced, the two convictions obtained being in Nova Scotia for the possession of opium smoking paraphernalia on the part of some local Chinese.

In *Quebec* the return to Canada of Harry Astroff, previously referred to, involved much work in connection with the preparation for the two trials of this man and the eventual prosecution of two of the Crown witnesses on perjury charges, at the direction of the judge. Astroff, who had a very large supply of narcotics in an office in Montreal, rented in another name, was a member of the gang engaged in international traffic on an extensive scale, several members of which had previously, with the assistance of United States officers, been convicted and sentenced to penitentiary terms.

A Belgian from London, Ont., having offered to supply narcotics imported from Europe into Montreal, proceeded, after very considerable preliminary work on the part of the Mounted Police, to that city, where he offered for sale a quantity of cocaine and opium for over \$3,000. When this man and his associates were arrested at the time of delivery, it was found, as had been to some extent suspected, that the goods sold were not narcotics at all, and that the whole scheme had been to cheat the purchasers out of their money, on the assumption that, the whole transaction being illegal, no action could be taken. This type of case, however, had become fairly common, and for this, as also another important reason, an amendment to the Narcotic Act had only just been made which included in narcotic offences that of "selling any substance represented or held out to be a drug"; consequently these men, somewhat to their surprise, were sentenced to terms of imprisonment.

Thanks to the acumen of a Customs officer on the Quebec border, who took the trouble to verify his suspicions, 100 ounces of morphine were discovered concealed in the automobile in which two Montreal men were returning from New York. One, who had been previously convicted, was sentenced to three years, although he is now out on bail pending appeal, while the other received a sentence of twelve months' imprisonment.

Some minor cases were developed in both Sherbrooke and Quebec city, while in the province of Quebec as a whole there were 151 convictions, as compared with 105 in the previous year. The increase, however, was entirely in connection with opium smoking, there being only 19 cases of illegal possession or selling, as compared with 50 in 1928, and it is beyond question, and confirmed from many angles, that narcotics were exceedingly hard to obtain in Montreal.

In *Ontario* the number of cases, 78, approximated closely to that of the previous year, 76, but the possession and selling cases increased from 42 to 55. The Toronto City Police Force were exceedingly active in narcotic work, and the results of their efforts were most valuable. In so far as Federal cases were concerned, the Mounted Police, after months of most painstaking work, succeeded in bringing to book a gang of Italian traffickers, whose methods were exceedingly clever. Large quantities of narcotics were involved, and while one man eventually jumped his heavy bail, convictions were obtained in the other three cases, and terms of imprisonment imposed. At Windsor two men with previous police records were sentenced to four and three years respectively for the illegal possession of twenty ounces of morphine and cocaine, which they were in process of selling to a member of the Mounted Police specially assigned to the case from another district. This man, posing as a buyer, had arranged certain plans with other members of the force, all of which through quite unpredictable circumstances miscarried, and he was eventually faced with the situation that he was alone in an automobile with the two men and the narcotics, and it was proposed to proceed to a certain hotel where his situation would probably become even more invidious. He therefore brought matters to a head by arresting them single handed; one escaped but subsequently gave himself up, and the

pair were given the sentences quoted above. At Peterborough there was one Chinese case involving the possession of a considerable quantity of opium, in connection with which a sentence of eighteen months' imprisonment was imposed.

In *Manitoba* there were 19 convictions, 18 of which were for possession or selling, and all in the city of Winnipeg, as compared with 25 cases in the previous year. Winnipeg is an outstanding example of the results which may be achieved by means of unrelenting effort on the part of all police forces and the imposition of exemplary sentences by the courts. Three years ago the illicit narcotic situation in that city left much to be desired, but with the city police actively handling the small peddler, and being provided with legal assistance from this Department in such larger cases as they encountered, and with the arrest by the Mounted Police of not only the known local traffickers of larger calibre, but some whose activities involved the connivance of confederates in other cities, who were in turn arrested, a most radical change in the situation has been effected, and for months past illicit narcotics have been practically unobtainable.

The principal trafficker in the Winnipeg district was a man named Toole, and the ramifications of the various cases linked with his had, in one instance, a tragic ending. Toole, some time prior to his arrest, doubtless felt that conditions in Winnipeg were getting too hot to justify his retaining large quantities of narcotics in his possession. At any rate he conceived and carried out the idea of hiding thirty ounce packets of heroin in two inner tire tubes, and caching same under a culvert some eight miles from Winnipeg. By this scheme he could visit his cache nightly, extract therefrom sufficient to cover his sales, and only retain possession thereof for a period sufficient to arrange for delivery to his customers. Through the exploration of the culvert by a dog, the cache was discovered by two farmers, who naturally did not recognize the contents as being narcotics. One of them despatched some to a chemist for analysis, while the other handed some to the manager of a grocery in Winnipeg. This man in turn eventually claimed that it was stolen from him, but at any rate it came into the possession of a young man who, with his brother, commenced to sell same at prices far in excess of the licit value. These sales came to the knowledge of the Mounted Police, who, within a short time, had arrested the two brothers, another man involved with them, and the manager of the grocery. The latter was evidently much worried at his connection with the affair, and committed suicide before the trial, while the others were in due course sentenced to terms of imprisonment. Not long afterwards the arrest of Toole himself was effected, as a result of which fifteen more ounces of heroin were obtained, and Toole was sentenced to four years in the penitentiary.

Another well-known trafficker who had a previous police record, named Regan, was, as a result of co-operation with the Manitoba Provincial Police, arrested for selling narcotics, and sentenced to five years in the penitentiary. It was undoubtedly the arrest of men of this type, to whom stiff sentences were awarded, which has resulted in Winnipeg achieving a degree of freedom from narcotic trafficking which is remarkable, and which we hope will be maintained in future.

In *Saskatchewan* there were ten cases as compared with fifteen in the previous year, the possession and selling charges totalling six, as compared with eleven in 1928. The only two cases which varied in any way from the normal occurred in Saskatoon. In one of these a well-known criminal addict from Winnipeg broke into a drug store and stole a supply of narcotics. Prompt action on the part of the city police resulted in his arrest, and he was in due course sentenced to two years in the penitentiary. In the other case, although it terminated in Saskatoon, the previous investigation had involved a very large amount of work in the whole of the Prairie Provinces, the Okanagan valley and the Pacific coast, as the man involved, himself an addict and of good appear-

ance, with a previous pharmaceutical knowledge, had travelled through the whole of the West forging the names of local physicians to narcotic prescriptions. It proved to be a matter of some difficulty to locate him, although there were many evidences of his activities in various places which he had left. Upon being apprehended, however, he pleaded guilty and was sentenced to both fine and imprisonment.

In *Alberta* there were twelve cases, nine of which involved possession and selling, as compared with five in the previous year, four of which were in connection with possession and selling. None of these cases, which occurred in Calgary, Lethbridge, and Edmonton, were of any particular importance except that in one instance a man named Hamilton, having been sentenced to eighteen months' imprisonment for illegal possession, was transferred to Ponoka Asylum for cure of drug addiction, from which institution he shortly afterwards escaped. Some considerable time later he was arrested for illegal possession in New Westminster, B.C., and it is strongly suspected that he was responsible for the theft of a supply of narcotics in a hospital at that point. On pleading guilty at the assizes, the chief justice, in view of his exceptionally long police record, sentenced him to seven years in the penitentiary.

In connection with a Chinese case at Calgary, in which a charge of illegal possession had been laid, the magistrate found the accused guilty of the lesser offence of "smoking opium", an offence with which he had not been charged. The case was taken to appeal and in due course the Chief Justice of Alberta reversed the magistrate's decision in a judgment which has been since extensively quoted, and in the course of which he stated:—

"The penalty for smoking is a fine up to \$100 or imprisonment up to three months or both, while the minimum punishment for the offence charged is 6 months imprisonment and a fine of \$200 with the further consequence of deportation.

"Counsel for accused says he has lived 23 years in Calgary and the consequence of deportation is a very serious one. There is no doubt that is true but the responsibility for that is not on the magistrate or the court but on Parliament and it cannot be taken into consideration in the determination of a pure question of law.

"Equally the responsibility is on the prosecution and not on the court as to what charges will be laid In this case the offence charged was proved

"In the second place 'smoking' is not included in 'having in possession'. It may perhaps be said that one cannot smoke without having in possession but certainly one can have in possession without smoking. Section 951 (of the Criminal Code) says nothing about a 'lesser offence' and that popular term must not be taken in the sense of a minor or less serious offence but it must be understood as meaning 'a part of the offence,' when used in reference to this section It seems clear, therefore, that the conclusion of the magistrate was not legally justified."

In so far as *British Columbia* is concerned, there was an increase to 295 convictions as compared with 200 in the preceding period. The increase, however, was in connection with opium smoking offences, thanks to the activities of the British Columbia Provincial Police and the City Police of Vancouver, while the Royal Canadian Mounted Police also encountered a considerable number of such cases in the course of developing others of a more important nature. The convictions for the possession and selling of narcotics decreased from 101 in 1928 to 82 during the period now under review, and in this type of case also we are indebted to the Vancouver City Police, not only for their hearty co-operation but for their efforts to control the trafficker.

The Pacific coast, which for so many years has presented very great difficulties to those endeavouring to control the illicit narcotic traffic, is now undoubtedly in very much better shape than ever before. Some extremely important cases involving many months of patient and clever investigation have been brought to a successful conclusion by the incarceration of those concerned, and I cannot speak too highly of the work of the Royal Canadian Mounted Police in that regard. The Commissioner of that force concentrated in Vancouver a number of specially selected men for an intensive course of training in narcotic

work, which proved to be a highly satisfactory arrangement. Conditions in Vancouver enabled the practical difficulties encountered to be demonstrated on the spot, and after several months of both practical and theoretical instruction the knowledge which they have acquired cannot fail to be of the utmost value in the various parts of Canada to which the men returned.

One of the most expert narcotic traffickers in Vancouver, in the person of a Chinese woman named Mrs. Nip Gar, was brought to book after more than a year's work, during which many purchases of narcotics were made under varying conditions until sufficient evidence had accumulated to conclusively prove her active participation in the traffic and the continuity of her operations. In this, as in many other cases, it is not in the public interest to go into much detail, but the importance of her operations was recognized by the court in imposing a sentence of seven years in the penitentiary.

A number of cases involving the active participation of members of the crews of boats plying to Vancouver from the Orient, both by such persons themselves selling or by conspiring to smuggle narcotics ashore, were encountered, and heavy sentences in due course imposed. One of the most interesting cases in this connection was that in which, with the co-operation of the Customs Department, it became known that narcotics were being smuggled off one of the "Empresses" by means of a small collapsible boat, which was hidden under one of the piers in Vancouver harbour. A white man was caught with a large number of cans of opium which he was in progress of smuggling ashore, and during the development of the case his partner became involved and two "opium jackets" specially prepared for smuggling opium off the ships were found. These men were sentenced to five and two years respectively in the penitentiary, and a short time later it became possible to learn in advance of the intentions of certain Chinamen on shore to arrange for a large quantity of opium to be delivered from an "Empress" with the connivance of a member of the crew. The plans made met with full measure of success, and as a result four Chinese were arrested. They were each sentenced to two years in the penitentiary, but as they appealed, this department, in two of the cases, feeling that the Chinamen involved were traffickers of long standing and that the offence was an exceptionally serious one, cross-appealed, with the result that their sentences were, by the British Columbia Court of Appeal, increased to five years.

Over twenty traffickers in all were given penitentiary terms in British Columbia during the year, and although the large majority were Chinese, one case involving a white man, in addition to those quoted above, was that of a barber working on one of the "Empresses," who was caught in the act of smuggling a large quantity of opium ashore in a club bag with a false bottom. He was sentenced to a three-year term. Other cases involving penitentiary sentences were encountered in Kamloops, Ladysmith, New Westminster, Victoria, Agassiz and Fernie, and I can but repeat the observation made last year, namely, that there are now undoubtedly very many more of these larger traffickers inside the penitentiary than there are at large. The price of opium has increased three hundred per cent in the past three years on the Pacific coast, which is in itself a good indication of the progress made. At the same time, however, it has to be remembered that, with a much higher price obtaining, the profits accruing from a successful deal are correspondingly greater, and this factor undoubtedly will continue to tempt others to embark in the traffic and run the risk of detection, with the heavy punishments accruing thereto.

Our relations with the narcotic authorities of the United States have continued to be most cordial; the closest co-operation exists not only theoretically but actually as a matter of daily routine, and in very many ways the advantage of combined effort on both sides of the international boundary line has been abundantly proven. The League of Nations recently drew the attention of the

nations of the world to the special treaty existing between the United States and Canada with regard to co-operation, exchange of information, extradition of prisoners, etc., in connection with narcotic matters, and invited them to emulate the example set. It is, therefore, with particular pleasure that I record the great advantages accruing from the above arrangement. During the year an opportunity was also accorded of a personal exchange of views, information, etc., with the British authorities, and the Narcotic Services of both countries are now in constant touch.

Although I have particularly mentioned the work of the Royal Canadian Mounted Police in British Columbia, I desire to record our great appreciation of their most valuable services in connection with narcotic matters throughout Canada as a whole. The co-operation between that force and the Narcotic Division is extremely close, and we have nothing but praise for the manner in which investigations are carried out, many of which involve the exercise of patience and ingenuity to a remarkable degree.

With a new and improved Narcotic Act at our disposal; with a large number of Appeal Court decisions obtained which cannot fail to act as valuable precedents in the future, and with greatly improved methods of co-ordination of activities both in Canada and outside the borders of this country; with an increasing improvement in the illicit situation throughout Canada as a whole, and with a prospect of international action with a view to controlling the illicit manufacture of narcotics, it is felt that the results of the year's work can be looked upon with satisfaction, and that we are reasonably equipped to carry on the work of narcotic control in the future.

TABLE 1A.—DETAILS OF CONVICTIONS UNDER THE OPIUM AND NARCOTIC DRUG ACT FOR THE JUDICIAL YEAR ENDED SEPTEMBER 30, 1929

Province	Nature of Offence								Totals

* Deck is a small package containing from two to five grains of drugs.

THE PROPRIETARY OR PATENT MEDICINE DIVISION

The Proprietary or Patent Medicine Act controls the manufacture, sale and importation of every secret formula non-pharmacopœial medicine permitted sale in Canada. Each such medicine is given a registration number, and its sale is reviewed and licensed annually. Applications for registration are carefully considered, having regard to the drugs used in the composition of the medicine; the purpose for which the product is recommended; the limitations placed on the use of potent drugs in its composition; the presence of alcohol in quantity exceeding 2½ per cent by volume, and the fact that no false, misleading, exaggerated claims or statements shall, in any manner, be made in respect of such article.

The activities of the Division during the past fiscal year comprised in particular a review of the registration of 5,131 medicinals; the registering of 554 new preparations, and licensing a total of 5,685; the examination and criticism of 731 labels, 200 cartons, 134 samples as labelled and found on the market, and 249 newspaper and other collateral advertisements. The Advisory Board approved 82 alcoholic medicinal preparations as registerable, and rejected 26 as insufficiently medicated.

During the period referred to the division continued to give attention to all infractions of the law with the object of assuring the Canadian public of a truthfully labelled proprietary or patent medicine supply, and assisting well informed vendors and manufacturers to sell their preparations under truthful statements without being forced into unfair competition with medicinals put out under false, misleading and exaggerated claims. Falsely labelled medicines for self-administration by the public constitute a grave danger, not in so much that they may prove injurious, as that those afflicted with some serious disease may rely upon them, and neglect approved scientific treatment until it is too late to control a malady which might have responded to proper treatment at the outset.

Much has been done to protect the public from the exploiters of new discoveries in medical science and the sciences related thereto, put forward under the guise of proprietary medicines. These schemes are generally frustrated at their inception through the control which the department exercises over the business of the manufacturer, and the advertisements of the modern advertising expert.

In the experience of the department, and in the light of further revealed scientific knowledge respecting the action and use of drugs, it has been found necessary to add the following drugs to the schedule of the Act, in order that restriction may be placed on their use. Other potent drugs are being investigated:—

- Phenobarbital,
- Beta Naphthol,
- Ephedrine Salts,
- Phosphorus,
- Scopolamine,
- Hyoscine,
- Butyn,
- Benzocaine,
- Compounds of Antimony.

Full co-operation was had with the administrators of related legislation.

A number of shipments of proprietary medicines from foreign ports were refused entry into Canada for improper labelling, and considerable quantities of medicinals placed on the Canadian market were seized for non-conformity with requirements.

PUBLIC HEALTH ENGINEERING DIVISION

Work carried on under this heading is by virtue of the votes known as "Public Works Health Act" and "Pollution of the Inland Waters of Canada."

Co-operative work was done in collaboration with representatives of the United States Public Health Service, in the districts adjoining the international boundary, regarding the pollution of boundary waters and the enforcement of certain regulations respecting drinking and culinary water supplies for common carriers engaged in international traffic.

This co-operative arrangement with the United States Public Health Service is of mutual benefit to the people of both countries. Under this arrangement more accurate information is available regarding vessel movements, water supplies, laboratory analyses, and sanitary conditions.

The necessity for co-operation among the nations of the world in preventing the spread of disease dangerous to public health has been more widely recognized during recent years than formerly. Experience has demonstrated that disease does not regard international boundaries, and the advance in the facilities for rapid transportation increases the danger of the introduction and spread of communicable disease.

Assistance was given to other departments in regard to sanitary facilities, water supplies, bathing beaches, etc., and their pollution by human wastes. The public health aspect of the sewage disposal problem involves more particularly the protection of bathing beaches, the use of waters for recreational purposes, and its use as a source of water supply. Pathogenic bacteria are dangerous to bathers and to persons drinking water which has not been subjected to some form of adequate purification.

In co-operation with officials of the Department of Public Works proposals for waterworks extensions and sewer outfalls were scrutinized for the municipalities of Toronto and Ford City, Ont., and Vancouver, B.C.

Conferences were had with officials responsible for sanitation on the railways of Canada, and data supplied regarding the quality of the water supplies available and general sanitary conditions on railway trains engaged in international and interprovincial traffic, in response to which there has been a definite improvement in the quality of the drinking and culinary water supplies in use aboard such common carriers.

Co-operative work was carried on with health officials in the provinces of Ontario, Quebec, Manitoba, Saskatchewan, Alberta, and British Columbia, and it is expected that it will be possible to extend this co-operation to the health officials in the provinces of Prince Edward Island, Nova Scotia, and New Brunswick with the appointment of a district engineer for the Atlantic district.

On request six National parks were visited and subsequently recommendations made concerning sanitary conditions therein. As the great National parks become more widely known, the number of visitors, railway travellers and automobile tourists, is rapidly increasing, and attendant problems of sanitation present themselves for solution. It can readily be seen that the thousands of tourists who visit the parks each year would, if they were to contract disease through insanitary conditions, carry the infection to all parts of the Dominion and the United States.

In co-operation with the Provincial Department of Health of Ontario, a preliminary investigation was made of a complaint from the State Department of Health of Minnesota, that the international waters of Rainy river were being polluted by sewage from Canadian sources.

Due to a combination of circumstances, the Great Lakes being bodies of fresh water that have been used extensively untreated for drinking and culinary purposes on vessels, and the adjoining cities and the lake-navigating vessels dispose of their wastes into these lakes, it is necessary to supervise vessel drinking and culinary water supplies and water supply systems very thoroughly and frequently.

Special consideration was given to the source of water supply of vessels tied up for the winter and fitting out either in the fall or early spring. Carelessness in regard to this matter has been definitely demonstrated on several occasions to have undesirable results.

Thirty-five examinations were made of the sources from which drinking and culinary water supplies were obtained for use aboard common carriers engaged in international and interprovincial traffic.

In accordance with the regulations concerning common carriers engaged in such traffic, 1,503 inspections were made of passenger trains engaged in interprovincial and international traffic, to check the quality of drinking and culinary water available. Inspections by health officials of vessels navigating on the inland waters of Canada numbered 1,987.

In order that the problem might be handled from all sides, it is customary to carry on an educational campaign in the winter seasons when the navigating officers and engineers are away from the boats. In the mid-winter season lectures on the subject of safe water supplies were given at various centres where students qualify for marine certificates. It is usual to give notice in advance that these lectures are open to all persons interested. The lectures consist of a talk on the subject of water supplies in addition to which moving pictures are shown indicating the life that is present in water supplies that have been contaminated by sewage.

Inspections were made and reports prepared concerning conditions on branch lines of railways under construction as provided under the Public Works Health Act. (This includes a special investigation of the typhoid outbreak on the Hudson Bay Railway.)

The application of the regulations concerning drinking and culinary water was extended to vessels on lake Winnipeg. Tourist traffic on this lake is handled largely by two steamship companies operating passenger vessels out of Selkirk, Man. Owing to the severe contamination of the Red River by sewage, the source of the drinking and culinary water supply at Selkirk was carefully investigated and subsequently very much improved.

In addition to the physical examination of water supplies for and on common carriers, information and advice of a technical nature and copies of reports concerning water supplies and sanitation were supplied to transportation companies.

Plans of Canadian passenger and freight vessels under construction at shipyards in both Great Britain and Canada were reviewed and, if in compliance with the regulations, approved as regards drinking and culinary water systems. Features of design of drinking and culinary water systems and sewage and garbage disposal methods were brought to the personal attention of transportation officials, so that in the future satisfactory water supply and sewage and garbage disposal systems may be installed.

Correspondence and interviews took place with health and transportation officials and other persons concerned regarding the certification of water supplies available at various points. In this connection visits were made to many waterworks to study in detail the facilities available for the supply of drinking and culinary water at these sources of supply.

Throughout the season transportation companies are supplied regularly with copies of water analyses reports, and wherever it seems advisable, attention of the management of these organizations is drawn to potential public health hazards.

The importance of a pure water supply for vessels is evidenced by the number of passengers carried. During the season of 1929 the larger steamships and ferries that ply into Canadian ports on the inland water of Canada carried 23,231,381 persons. The corresponding passenger movement on vessels of United States ownership was 24,104,992 during 1928.

The popularity of water from safe shore sources with steamship companies since control has been exercised by this department is well illustrated at Montreal. Hydrants are located at intervals along the water front and several crews of men are employed during the navigation season filling orders for water for boilers and drinking water tanks on vessels about to sail. A motor truck is used to convey lengths of hose from the drying towers to the vessels. During 1928 a total of 32,875,000 gallons of fresh water was supplied to vessels, being an increase of 18,500,000 gallons over the quantity of water so supplied in 1923.

One of the features for careful attention in the public health supervision of railways is the quality of the drinking and culinary water supplies. Just how important this feature becomes is emphasized by the fact that during 1928 railways in Canada carried 40,592,792 passengers, in addition to the thousands of men who were employed in the maintenance and operation of these railways.

It was possible to give more attention to railroad and coachyard sanitation than in previous years. A very distinct attitude of co-operation exists in dealing with railroad officials and a very encouraging appreciation of the importance of railroad sanitation is manifest.

By means of a co-operative arrangement with the Pullman Company and the railways, this office is supplied with lists of all special gatherings or conventions, special mention being made of those where sleeping cars will be parked for occupancy in lieu of hotel accommodation. It is proposed to present details of railway sanitation in pamphlet form.

A river, as a natural drainage channel customarily receives the discharge of the liquid wastes of communities along its banks, these wastes comprising sewage from human beings and wastes from industries. The natural run-off into streams carries with it organic matter from fields, dead vegetation, detritus, and the like in addition to the sewage. Nature provides for the conversion of this organic matter into mineral matter, and then into organic life which serves for fish food. An important element necessary for this conversion is oxygen. The water of the stream and some of its organisms supply oxygen. The water absorbs it from the air at falls, rapids, and from quiescent, as well as wind-agitated surfaces and receives additional oxygen from tributary streams and from chlorophyl-bearing plant life. Where the conditions of sewage discharge and stream flow are such that sludge banks do not form, and where the organic matter does not use oxygen faster than it can be supplied, oxidation proceeds naturally and without due disturbance. The organic matter is broken down by bacterial action and mineralized, the products stimulating the growth of small plants and animals which become food for fish. Thus the biology, the fish life, and the oxygen balance are indices of the condition of the river. If the oxygen in the river water is greatly depleted, many kinds of fish suffer or are unable to exist unless they can escape to purer water. It is evident that when a stream is covered with ice there is very little opportunity for reaction and the oxygen content may be reduced to a minimum.

It is recognized that surface waters cannot be maintained in a condition suitable for drinking purposes without proper purification. This is due to the fact that there are along the shores of nearly every lake or river many sources of contamination which from a practical standpoint are beyond control. It is also realized that a grossly polluted stream adjacent to any community constitutes a menace to public health in that it may be, and often is, used for drinking purposes by people in the community and by strangers who may not know that the stream is unfit for such use.

There are certain areas in the grossly polluted sections of a river, especially near the sewer outlets, where scum such as oil and grease and floating solid material discharged with the sewage and industrial wastes can be seen on the surface of the water. Undoubtedly some of this material is infected with disease producing organisms. It is reasonable to conclude that contact with this material, through wading or bathing might be dangerous to health, especially in the summer months.

It is a well known fact that where dairy herds are permitted to wade in grossly polluted waters the contaminating material adhering to the udders may get into the milk at the time of milking and so infect the milk supply, unless the milk is subsequently pasteurized, before delivery to the consumer.

Investigations conducted in Minnesota, Michigan, and Manitoba indicate that fish may become infected by the eggs of the fish tapeworm through the pollution of natural waters with human discharges. Recent investigations show that fish in some natural waters in northern Minnesota, Michigan, and Manitoba are infected. An increasing number of human infections in these regions are

being brought to light. The importance of protecting natural waters from pollution by sewage containing human discharges from the standpoint of infection with fish tapeworm should not be overlooked.

Pollution of waters has an effect upon the wealth of any community and, therefore, the economic phases of the problem cannot be ignored. Some of these, such as depreciation in property values, loss to the commercial fishing industry, etc., can be estimated within reasonable limits and even roughly measured in dollars and cents.

It is difficult to measure in money value the effect of pollution from an aesthetic standpoint.

In addition to the public health hazard of attempting to purify highly polluted waters, the possibility that such waters may develop other objectionable characteristics, such as taste and odour, is greater than would be the case with water from relatively unpolluted rivers or lakes.

From comparison of the charts showing typhoid fever incidence and quality of drinking water, there is apparently a very close relation between the number of cases of typhoid fever among members of the crews of Great Lakes vessels and the quality of the water supplied on these vessels.

How typhoid fever can be controlled is well illustrated by the record for the calendar year 1928 in the United States. Here a new low death rate for this disease is shown. At the beginning of the present century typhoid fever was responsible for 34 deaths per 100,000 of the population. This mortality has decreased until in 1928, forty-three states reported 5,425 deaths, giving a death rate of 4.8 per 100,000. This reduction of 86 per cent in the death rate from typhoid fever has been brought about largely through the practical application of the principles of modern sanitary science.

Most cases of typhoid fever are contracted during the summer and early fall. From this fact the disease is often called "vacation typhoid." The infection is conveyed through milk, water or food, and the germs of the disease must be swallowed before a person becomes ill. A serious menace to vacationists is the drinking of water or milk, or the eating of food which may have become contaminated by body discharges from a case or a carrier. A carrier is defined as a person who, although not having any symptoms, harbours within his body, and discharges from time to time, the germs of the disease. From three to five per cent of persons who recover from typhoid fever remain carriers for an indefinite time. Such persons are a menace to all who partake of food handled or prepared by them.

Fortunately medical science has prepared a method by which illness with typhoid fever can be prevented. A simple treatment with anti-typhoid vaccine will protect a person for a period of two years and a half. This information is presented at this time to give opportunity to every one to become protected before the vacation season opens. All who travel, and especially those who are planning to camp out during the coming vacation season, should avail themselves of this protection for the menace of typhoid fever is always present.

The science of public health does not stop at interprovincial or international boundary lines and it is only through the exchange of scientific knowledge and practical ideas that we may hope to attain the best living conditions in Canada.

HEALTH AND PUBLIC WORKS

The Public Works Health Act and Regulations, R.S. Canada 135, section 1, first enacted in 1899, has been in force for over thirty years, with the consequence that changing conditions have made it expedient to revise the act and the regulations thereunder so as to be in line with the times.

During the past year inspections and reports as provided in the Public Works Health Act were made at thirteen different points concerning sanitary conditions on branch lines of railways and other federal public works from Alberta on the west to Nova Scotia on the east. This includes a special investigation of an outbreak of typhoid fever in construction camps along the line of the Hudson Bay Railway.

Primary attention was given to the enforcement of the clauses of the Act that provide for medical treatment, temporary hospitals and a definite number of doctors on each construction work in direct proportion to the number of men employed on such construction work.

All sorts of insanitary conditions were found to have existed prior to the inspections and measures had to be taken for the correction of these undesirable conditions. Drinking water supplies varied in quality from good to dangerous. Sewage and garbage disposal methods were also found to be included in a similar category. While matters such as fly screening of kitchens and dining rooms and ventilation of sleeping quarters had to receive careful attention.

The total number of cases of typhoid fever reported as originating aboard Canadian vessels navigating the waters of lakes Superior, Huron, Erie, and Ontario during 1929 was three, as indicated in the attached schedule.

During the same period the number of cases of typhoid fever reported as originating from vessels navigating the St. Lawrence river was eleven.

A report from the representative of the United States Public Health Service states that the number of typhoid fever cases reported from Great Lakes vessels of United States registry during the season of navigation of 1929 was nine.

TABLE 1.—TYPHOID FEVER PATIENTS FROM GREAT LAKES STEAMSHIPS

Steamship	Owners	Number of cases reported	From where reported	Date	Remarks, patient's name, etc.
<i>Puckasaw</i>	Newaygo Timber Co., Ltd., Port Arthur, Ont.	1	Dr. G. L. Sparks, District Officer of Health, Fort William, Ont.	Capt. James Gerow. Patient died.
<i>Smith</i>	Canadian Towing and Wreck- ing Co.	1	Winnipeg General Hospital.....	Oct. 6, 1929	Jabie Smith.
<i>Yorkton</i>	Mathews Steamship Co.....	1	St. Luke's Hospital, Montreal.....	Nov. 27, 1929	Sam Tobin.

TABLE 2.—TYPHOID FEVER PATIENTS FROM VESSELS ON THE ST. LAWRENCE RIVER

Steamship	Owners	Number of cases reported	From where reported	Date	Remarks, patient's name, etc.
<i>Mercier</i>	Quebec and St. Lawrence Navigation Co., Ltd.	1	Marine Hospital, Boston.....	April 15, 1929	Rene Desurault.
<i>Barge No. 1</i>	Department of Marine.....	1	Hotel Dieu, Quebec.....	May 24, 1929	Joseph LeBoeuf.
<i>Barge No. 1</i>	Department of Marine.....	1	Hotel Dieu, Quebec.....	May 27, 1929	Augustine Gallibois.
<i>Barge No. 3</i>	Department of Marine.....	1	Hotel Dieu, Quebec.....	June 15, 1929	Romeo Frechette.
<i>Dredge No. 8</i>	Department of Marine.....	1	Hotel Dieu, Quebec.....	June 18, 1929	Florian Fortin.
<i>Dredge No. 16</i>	Department of Marine.....	1	Hotel Dieu, Quebec.....	Aug. 23, 1929	Joseph St. Pierre.
<i>Dredge No. 16</i>	Department of Marine.....	1	Dr. A. Belanger, Lauzon.....	Sept. 8, 1929	Jules Roy.
<i>Barge No. 4</i>	Department of Marine.....	1	Hotel Dieu, Quebec.....	Sept. 30, 1929	Philippe Tremblay, Para-Typhoid A.
<i>Barge No. 4</i>	Department of Marine.....	1	Hotel Dieu, Quebec.....	Oct. 7, 1929	Corentin Audet.
<i>Valley Camp</i>	Great Lakes Transportation Co., Midland, Ont.	1	J. R. Menzies.....	Oct. 30, 1929	Antonio Guimont, Para-Typhoid B.
<i>Mikula</i>	Department of Marine.....	1	Jeffrey Hale Hospital.....	Mar. —, 1930	Shipkeeper.
<i>Mikula</i>	Department of Marine.....	1	Quebec General Hospital.....	Feb. 28, 1930	W. Mullins.
				Mar. 28, 1930	P. Desrochers.

TABLE 3.—CASES OF TYPHOID FEVER REPORTED FROM GREAT LAKES PORTS

Municipality	Year	Number of		Remarks, increase, etc.
		Cases	Deaths	
Montreal.....	1929
	1928	48	One from lake steamship.
	1927	5, 131	592	Epidemic due to milk.
	1926	93	49	4 from ss. <i>Lake Gaither</i> of U.S. ownership.
	1925	140	52	5 directly from steamships.
	1924	150	51
	1923	165	47	4 directly from steamships.
	1922	271	63
	1921	187	62
Cornwall.....	1929	None from lake vessels.
Kingston.....	1929	4	None from lake vessels.
	1928	None from lake vessels.
	1927	None from lake vessels.
	1926	2 directly from steamships.
	1924	6	All from outside of Kingston.
	1923	9	2	1 directly from steamships; 6 originated outside of Kingston.
	1922	A few	Report of Dr. Williamson.
	1921	6	Report of Dr. Williamson.
Toronto.....	1929	None from lake vessels.
	1928	32	None from lake steamships; 26 originated outside of city.
	1927	4 from steamships.
	1926	3 from ss. <i>Lake Gaither</i> , of U.S. ownership.
	1925	43	9	21 contracted infection outside of city.
	1924	39	29 originated outside of city.
	1923	85	2 directly from steamships. 66 originated outside of city.
Hamilton.....	1929	2	None from lake vessels.
	1928	None from lake vessels.
	1927	3	Probably infected outside of the city.
	1926	1
	1925	18	10 were infected outside of the city.
	1924	13	6 from outside of the city.
	1923	13	4	9 cases infected outside of city.
	1922	21	1
St. Catharines.....	1921	21	3
	1929	4	None from lake vessels; all contracted away from city.
	1928	1 from lake vessel.
	1927	1 from lake vessel.
	1923	13	2	1 from steamship; increase of 11.
Welland.....	1922	2	1
	1921	13	All contracted outside of city.
	1929	None from lake vessels.
	1928	4	1 from lake vessel.
	1927
Windsor.....	1926	None from lake vessels.
	1925	20	5	8 originated outside of Welland.
	1924	19	2 directly from steamships.
	1923	10	3 directly from steamships.
	1922	14	3 directly from steamships.
	1921	4
	1929	12	None from steamships.
Sarnia.....	1928	2	None from steamships.
	1926	1 case from tug, Reid Wrecking Co.
	1925	6	1 case from steamship <i>Sarnolite</i> .
	1924	10	2	None.
	1923	2	Both being employees of vessel companies.
	1922	5	4 directly from steamships.
	1921	4	3 directly from steamships.

TABLE 3.—CASES OF TYPHOID FEVER REPORTED FROM GREAT LAKES PORTS—*Con.*

Municipality	Year	Number of		Remarks, increase, etc.
		Cases	Deaths	
Collingwood.....	1929	1	None from lake vessels.
	1928	None from lake vessels.
	1927	None from lake vessels.
	1926	1 from Great Lakes vessel.
	1925	None from steamships.
	1924	None from steamships.
	1923	1	1 directly from vessel.
	1922	2	2 from steamships.
Owen Sound.....	1929	None from lake vessels.
	1928	None from steamships.
	1927	None from steamships.
	1926
	1925	28	3	An epidemic of typhoid fever in the city. One from lake vessel.
	1924	8	6 from steamships.
Midland.....	1928	2 from steamships.
	1925	2 cases from Great Lakes vessels.
	1924	2	Both from Great Lakes steamships.
	1923	11	Increase 10, 6 directly from steamships.
	1922	1	1 from steamship.
	1921	3	2 directly from steamships.
Parry Sound.....	1929	2	None from lake vessels.
	1928	2	None from lake vessels.
	1925	3
	1924	2	These two cases infected outside of Parry Sound.
	1923	13	This is for Parry Sound district, increase 3.
	1922	14
	1921	11	1	Very bad record. See report of Dr. E. George.
Sault Ste. Marie.....	1929	1	None from steamships.
	1928	1	None from steamships.
	1927	9	None from steamships.
	1926	None from steamships.
	1925	3	None from steamships.
	1924	1	None from steamships. Decrease of 4.
	1923	5	2 directly from steamships.
	1922	6	Increase of 3, 2 directly from steamships.
	1921	3	1 from steamship.
Port Arthur.....	1929	None from lake vessels.
	1928	2	Child on ss. <i>Glenbogie</i> and man from ss. <i>Assiniboia</i> .
	1927	None from steamships.
	1926
	1925
	1924
	1923	7	Increase of 6, 4 originated outside of Port Arthur.
	1922	1
Fort William.....	1921	1	1
	1929	1 from ss. <i>Puckasaw</i> and 1 from tug boat.
	1928	2	1 from ss. <i>Islet Prince</i> .
	1 from ss. <i>H. H. Brown</i> owned in Cleveland, U.S.A.
	1927	1 from tug <i>Strathmore</i> .
	1924	3	3 directly from steamships.
	1923	27	1	Increase 6, 11 directly from steamships.
	1922	21	1	Increase 11, 2 directly from steamships.
	1921	10	1	3 directly from steamships.

TABLE 4.—TYPHOID STATISTICS—TYPHOID FEVER CASES REPORTED

Province	Year	Totals		Increases		Remarks
		Cases	Deaths	Cases	Deaths	
Nova Scotia.....	1928	122	23	65		Increase over 1927.
	1927	57				
	1926	43	16			
	1925	91	24		3	There was a total of 193 from enteritis and diarrhoea in 1925.
	1924	123	24	10

MARINE HOSPITALS SERVICE

The medical and hospital treatment of sick and injured mariners has been continued without interruption since 1867 in conformity with the provisions of part five of the Canada Shipping Act (Chap. 186, R.S. 1927). The object of the Act is to provide medical and surgical attendance, and such other treatment as the cases require, and to protect the sea ports from being compelled to administer to those sick and injured mariners, not properly a charge against the municipality, who might be left at their ports by ships coming from foreign parts and meanwhile sailing away and evading responsibility.

With certain exceptions, a duty of two cents for every ton which the ship measures, registered tonnage, is levied and collected not more than three times during each calendar year on every ship arriving in any port in the provinces of Quebec, Nova Scotia, New Brunswick, Prince Edward Island or British Columbia from any place out of Canada or from a port in another province. Vessels engaged in the coasting trade of Canada, within the limits of one province, are not subject to the payment of the Sick Mariners' Dues. It is not compulsory for vessels employed exclusively in fishing to pay these dues, but the person in command may do so if he so desires, provided the vessel is registered in Canada and the first payment for the calendar year is made before the ship makes its first fishing voyage in the year.

All sick or injured mariners, belonging to vessels that have paid the Sick Mariners' Dues for the current calendar year, are entitled to gratuitous treatment if sent to a designated hospital or port physician in the provinces mentioned with a written recommendation from the master or person in command of the ship, endorsed as approved by the collector of customs.

The department operates two marine hospitals exclusively for the care and treatment of sick mariners—one at Sydney, N.S., and the other at Lunenburg, N.S. At other ports, provision is made as far as possible for their care and treatment at contract rates with the various local hospitals. Where there is no marine or designated hospital, the collector sends the sick mariner to a port physician. When considered necessary, the sick mariner may be sent to the nearest public hospital if there is one at a convenient distance and if not, he may be sent to a public or private boarding house.

Sick mariners' dues were collected from 3,316 vessels. The crews on these vessels numbered 96,590. The number of sick mariners treated was 6,069; 3,970 of these were admitted to hospitals and the number of days of hospital treatment was 57,589. The net amount of sick mariners' dues collected during the fiscal year was \$209,321.55 and the amount expended, including unpaid accounts on hand March 31, 1929, amounting to \$46,816.81 as the amount voted for 1928-29 was not sufficient, was \$253,649.31.

The following is a list of the hospitals in which sick mariners were given care and treatment and a statement of the diseases and injuries treated during the past fiscal year:—

Port	Name of Hospital
Nova Scotia—	
Amherst	Highland View
Antigonish	St. Martha's
Bridgewater	Dawson Memorial
Halifax	Victoria General
	Rockhead Minor Infections
	Halifax Infirmary
	Camp Hill
	City Health Board (Contagious Diseases)
	Tuberculosis
Kentville	Nova Scotia Sanatorium (Tuberculosis)
Lunenburg	Marine
North Sydney	Hamilton Memorial
Pictou	Pictou Cottage
Springhill	Springhill Cottage

Port	Name of Hospital
<i>Nova Scotia—Concluded</i>	
Sydney	Marine City of Sydney
Windsor	Payzant Memorial
Yarmouth	Yarmouth
<i>New Brunswick—</i>	
Bathurst	Gloucester
Campbellton	Hotel-Dieu
Chatham	Hotel-Dieu
Moncton	Moncton
Rexton	Rexton
St. John	General Public St. John County (Tuberculosis) Quarantine
St. Stephen	Chipman Memorial
Tracadie	Hotel-Dieu
<i>Prince Edward Island—</i>	
Charlottetown	Charlottetown Prince Edward Island
Summerside	Prince County
<i>Quebec—</i>	
Chicoutimi	Hotel-Dieu
Chandler	Providence
Gaspe	l'Hotel Dieu du Gaspe
Harrington	Harrington
Lachine	General
Lake Edward	Lake Edward Sanatorium (Tuberculosis)
Levis	Hotel-Dieu
Montreal	St. Luke's Montreal General Notre Dame Royal Victoria Convalescent Home Alexandria (Contagious Diseases) Hotel-Dieu Providence St. Paul's (Contagious Diseases) St. Mary's Grace Dart Home (Tuberculosis)
Quebec	Hotel-Dieu Jeffery Hale's St. Michel Archange Mastai Laval (Tuberculosis)
Rimouski	St. Joseph's
Riviere du Loup	St. Joseph's
Sorel	Hopital General
Sainte-Agathe-Des-Monts	Laurentian Sanatorium (Tuberculosis)
Three Rivers	Hopital Saint-Joseph
<i>British Columbia—</i>	
Anyox	Anyox General
Bella Bella	R. W. Large Memorial
Chemainus	Chemainus General
Cumberland	General
Nanaimo	Nanaimo
New Westminster	St. Mary's
Ocean Falls	Ocean Falls
Port Alice	Port Alice Private
Port Alberni	West Coast General
Powell River	St. Luke's
Prince Rupert	General
Stewart	Stewart General
Tranquille	Tranquille Sanatorium (Tuberculosis)
Vancouver	St. Paul's North Vancouver General Shaughnessy Vancouver General
Victoria	St. Joseph's Provincial Royal Jubilee

Emergency hospitals were operated at the following ports:—

Nova Scotia.—Canso, Clark's Harbour, Larry's River, Liverpool, Lockeport, Port Felix, Port Greville, Sherbrooke.

New Brunswick.—Beaver Harbour, Lameque, North Head.

Prince Edward Island.—Point Prim.

STATEMENT OF DISEASES OR INJURIES TREATED DURING THE YEAR 1929-30

General Diseases—

Alcoholism	12
Anaemia	11
Beri-Beri	1
Chicken-Pox	3
Cholera	3
Circumcision	5
Cyst	39
Diphtheria	9
Erysipelas	4
General Debility	40
Gonorrhœa	384
Influenza	227
Malaria	16
Measles	18
Mountain Fever	1
Mumps	6
Neurasthenia	7
Malignant growths	11
Non-malignant growths	16
Ptomaine	5
Rheumatism	96
Rheumatic fever	6

QUARANTINE SERVICE

The organized quarantine stations of Canada are:—

Province of Quebec.—Grosse Isle in the river St. Lawrence, with Father Point as the inspecting base, and Quebec and Montreal harbours as substations.

Province of Nova Scotia.—Halifax, the Harbour and Lawlor's Island.

Province of New Brunswick.—Saint John, the Harbour and Partridge Island.

Province of British Columbia.—William Head, with Victoria, Esquimalt, Vancouver (including all of Burrard Inlet), New Westminster, and their respective harbours, as substations.

Each organized quarantine station is in charge of a medical quarantine officer.

A substation is a port of final destination to which vessels may go after procuring pratique at an organized quarantine station, and where, following discharge of cargo, they can with greater facility be fumigated or disinfected, and where other functions may, when required, be performed, as directed by the Department.

Each substation is in charge of the chief or senior immigration medical officer, except when otherwise provided by the department.

UNORGANIZED QUARANTINE STATIONS

Every maritime port in Canada, other than those mentioned above, is designated an unorganized maritime quarantine station.

Every inland port on the Canadian frontier is designated an unorganized inland quarantine station.

At each unorganized maritime or inland quarantine station, the local customs officer is, ex officio, the quarantine officer for the purposes of these regulations.

The Governor in Council may, however, from time to time, when circumstances warrant it, appoint a temporary medical quarantine officer at any unorganized maritime or inland quarantine station, who shall supersede for the time being the customs officer as the quarantine officer of such port.

QUARANTINABLE DISEASES

The quarantinable diseases are:—

- (a) Cholera (Asiatic).
- (b) Plague.
- (c) Smallpox.
- (d) Typhus fever.
- (e) Yellow fever.

OTHER CONTAGIOUS OR INFECTIOUS DISEASES

Persons sick with other infectious or contagious diseases such as chickenpox, diphtheria, enteric fever, erysipelas, influenza, measles, scarlet fever, etc., are taken care of at quarantine stations only when proper facilities do not exist for their treatment at the port where such cases are to be landed.

The following tabulation indicates the number of vessels and personnel inspected at the organized quarantine stations during the fiscal year 1929-30:—

VESSELS AND PERSONNEL INSPECTED

Station	Vessels inspected	Passengers				Crews	Cattlemen, stowaways, distressed seamen, etc.	Total personnel inspected
		First class	Cabin class	Tourist third	Third class and steerage			
Father Point, P.Q.....	917	5,041	21,128	26,689	75,120	93,547	96	221,621
Halifax, N.S.....	636	2,831	20,413	13,602	52,446	89,950	44	179,286
St. John, N.B.....	282	3,173	45	2,057	15,800	21,609	15	42,699
William Head, B.C....	952	6,228	3,041	7	16,978	63,280	17	89,551
Total.....	2,787	17,273	44,627	42,355	160,344	268,386	172	533,157

No cases of quarantinable disease occurred during the year on vessels which came up the St. Lawrence river. Minor infectious diseases were, as usual, disembarked at the port of Quebec and cared for in the Immigration Hospital (see report of Immigration Medical Division).

Neither were there any cases of quarantinable disease at the ports of Halifax or Saint John during the year; a few cases of minor infectious diseases only. At the port of Halifax, these were treated in the Immigration Hospital at Rockhead, as is now the established practice (see report of Immigration Medical Division).

At William Head, B.C., the quarantine station guarding Pacific coast ports, apart from one case of smallpox, the sick taken by the quarantine officer from arriving vessels were restricted to the minor infectious diseases class.

The following tables show the distribution of sick, contacts, and persons accompanying the sick, in the quarantine hospitals at Saint John and William Head respectively:—

CASES TREATED IN QUARANTINE HOSPITAL AT PARTRIDGE ISLAND, ST. JOHN, N.B.

Diagnosis	Number of sick	Number of hospital days	Contracts and persons accompanying sick	Detention period in days	Total persons detained	Total days in hospital and detention quarters
Chickenpox.....	6	87	8	125	14	212
Erysipelas.....	2	19			2	19
Measles.....	12	298	19	369	31	667
Mumps.....	5	61	15	203	20	264
Scarlet fever.....	5	165	8	180	13	345
Total.....	30	650	50	877	80	1,507

CASES TREATED IN QUARANTINE HOSPITAL AT WILLIAM HEAD, B.C.

Diagnosis	Number of sick	Number of hospital days	Contracts and persons accompanying sick	Detention period in days	Total persons detained	Total days in hospital and detention quarters
Chickenpox.....	1	13	1	13	2	26
*Influenzal pneumonia.....	16	89	170	510	186	599
Smallpox.....	1	42	9	108	10	150
Totals.....	18	144	180	631	198	775

*Two of these cases terminated fatally.

DERATIZATION OF SHIPS

In accordance with article 28 of the International Sanitary Convention, 1926, to which Canada is a signatory, and by authority of section 44 of the Canadian Quarantine Regulations, all ships arriving at ports of Canada, except coasting vessels, are subject to periodical fumigation for the destruction of rats. When, upon inspection, ships are found to be permanently so maintained as to keep the rat population down to a minimum, the Department has authority, under the regulations, to issue deratization exemption certificates in certain cases.

Facilities for the deratization of ships now exist in Canada at the ports of Halifax and North Sydney, Nova Scotia; St. John, New Brunswick; Chicoutimi, Port Alfred, Three Rivers, Quebec, and Montreal, province of Quebec; Vancouver, New Westminster, Prince Rupert, Victoria, Esquimalt, William Head, Cremainus, Nanaimo, Comex, and Port Alberni, British Columbia.

The following table summarizes the work done at the respective ports:—

FUMIGATION OF SHIPS FOR DERATIZATION

Port	Vessels fumigated with		Deratization certificates issued	Dead rats recovered	Deratization exemption certificates issued
	Cyanide	Sulphur			
Halifax, N.S.....	41	41	50	11
North Sydney, N.S.....	4	4
St. John, N.B.....	11	3	14	20	11

QUARANTINE AGREEMENT WITH UNITED STATES

In harmony with the provisions of Article 57 of the International Sanitary Convention, signed at Paris on June 21, 1926, and reading in part as follows:—

“Governments, taking into account their particular situation, may conclude special agreements amongst themselves, in order to make the sanitary measures prescribed by the Convention more efficacious and less burdensome”;

and following strong representations on the part of the Canadian and United States shipping interests on the Pacific coast, an Agreement was entered into

during the fiscal year between the Government of Canada and the Government of the United States, effective as from January 1, 1930, whereby vessels from foreign countries destined to both Canadian and United States ports located on the Straits of Juan de Fuca, Haro, Rosario, Georgia, Puget Sound or their tributaries or connected waters, or so destined to ports on the Great Lakes and St. Lawrence River, shall undergo one quarantine inspection only, i.e., by the quarantine officer of that Government having jurisdiction over the primary port of arrival, in place of the dual quarantine inspection conducted hitherto. In such cases the quarantine pratique is issued in duplicate, the original being presented at the primary port of arrival and the duplicate presented to the quarantine officer at the first port of call under the jurisdiction of the other Government. This Agreement is subject to the proviso that cases of quarantinable disease have not been prevalent in the ports visited and have not occurred on board the vessel since the issuance of the original pratique.

REPORTS FROM QUARANTINE OFFICERS

The following extracts are from reports received from the respective quarantine officers:—

St. Lawrence River Quarantine Service: Medical Superintendent, Dr. W. W. Ayles.

"Following is a résumé of the activities at Father Point inspecting station during the season of 1929 just ended:—

"There were 917 vessels cleared during the season, being 317 fewer than last year. This decrease was due to the grain situation. Practically no tramp steamers came up the St. Lawrence during the season.

"A total of 1,634 vessels passed inward and the steamer *Jalobert* or the new launch *A. Martin* of the pilotage service went alongside of them. Quite a number were coasting vessels and we, therefore, did not have to board them. We had, however, to go out to them and in many cases had to inquire of the masters whence they came owing to the fact that many vessels will not fly the necessary quarantine signals although their captains have been coming up the St. Lawrence for years. This omission on their part entails a great deal of extra and useless work for us. As I did in last year's report, I again recommend the imposition of the fine, as provided in the regulations, for breaches of the same. If done in a few instances there would soon be no necessity of doing so, as the regulation would then be carried out.

"The past season has been a good one, there being practically no severe storms at all and only a few moderate ones. All vessels were cleared here and none had to be sent to Quebec as in former years.

"Of the vessels cleared, 203 were passenger vessels (22 per cent of vessels cleared), being seven fewer of this class of vessel than last year.

"The personnel on vessels cleared totalled 221,621, divided as follows: First, 5,041; cabin class, 21,128; tourist third, 26,689; third class, 75,120; steerage, nil; crews, 93,547; others, 96.

"Contagious or other diseases were reported on 93 vessels on as many voyages. These included all the minor infectious diseases and cases of pyrexia where the disease was not sufficiently developed to permit our making a definite diagnosis here. Other non-infectious cases on board were noted and reported. All these cases were taken care of at Quebec at the Immigration Hospital.

"On one occasion the ss. *Melita* wirelessed that she had three cases of variola on board, but on boarding the vessel here we decided it was not such and our diagnosis was confirmed by Dr. Mayrand, consulting specialist of the Department at Quebec, where I took the vessel direct instead of stopping at Grosse Isle as would have been done if there had been a doubt as to the nature of the disease.

"On June 16 the ss. *Cairglen* arrived here with one of the crew ill. A provisional diagnosis of varicella was made here and the vessel sent to Quebec for confirmation or otherwise. The diagnosis of varicella was confirmed there but on the vessel's arrival at Montreal the diagnosis was changed to variola and the case treated as such.

"On October 13 the ss. *Hada County* and on October 23 the ss. *Aalsum* arrived here from Rotterdam where alastrim or variola was epidemic. As the period of incubation for this disease had not elapsed before their dates of arrival, these vessels were taken to Grosse Isle and detained for the required period. Every person on board these vessels who needed it was vaccinated. The vessels were then released.

"On several occasions persons requiring vaccination under the regulations, were vaccinated here. On seven other occasions a total of twenty persons who, coming from infected areas, refused to be vaccinated were sent to the Immigration Hospital at Quebec for the necessary period of detention.

"Deaths were reported on eleven vessels as follows:—*Metagama*, lost overboard; *Antonia*, premature birth; *Montcalm*, urennic coma; *Letitia*, jumped overboard; *Proteus*, malaria; *Lady Somers*, myocarditis; *Metagama*, bronchitis; *Regina* (2), cardiac asthma and cerebral haemorrhage; *Champlain*, burned to death; *Laurentic*, pneumonia; *Olaf Bergh*, heart failure.

"Births were reported on two vessels—the *Aurania*, May 10, and *Antonia*, May 12.

"Passengers obtained permission from the Departments of National Revenue and Immigration to land at Father Point from incoming steamers on three occasions.

"The vessels ordered fumigated were very much fewer than last season owing to falling off in the number of tramp steamers arriving here. Only sixty-four vessels were ordered fumigated—fifty-two at Montreal, five at Quebec, three at Three Rivers and four at Port Alfred and Chicoutimi.

"Twelve vessels arrived here that had sailed from or called at infected ports. Of these, nine were from a smallpox-infected port and three from a plague-infected port. Three other vessels had called at a plague-infected port at some time since their last fumigation.

"A total of fifty-eight vessels were given routine orders which call for an inspection and, if necessary, fumigation.

"Fourteen vessels were given exemption certificates; the remainder were fumigated."

Lawlor's Island, Halifax, N.S.: Quarantine Officer, Dr. J. V. Graham

"During the year 636 vessels were inspected at this Quarantine Station. These vessels carried 89,950 crew, 2,831 first-class passengers, 13,602 tourist-third passengers, 52,446 third-class passengers and 44 others made up of stow-aways, distressed seamen, cattlemen and deportees. The vessels reported two births and eleven deaths at sea, the deaths being classified as angina pectoris, one; acute peritonitis, one; cancer of liver, one; broncho-pneumonia, three; dyspepsia, one; diabetes, one; gastro enteritis, one; stomach ulcer, one; apoplexy, one.

"The following cases of minor infectious disease and members of their families accompanying were handed over to the Immigration Medical Officer for hospitalization: Measles, thirty-nine, with fifty-six accompanying; scarlet fever, four, with six accompanying; mumps, three, with nine accompanying; chickenpox, twelve, with sixteen accompanying; observation for diphtheria, one; influenza, one, with three accompanying; german measles, one, with two accompanying.

"No vessels arrived at this port during the fiscal year with quarantinable disease.

"During the year forty-one vessels were fumigated at this port. On nine of these, fifty dead rats were recovered after fumigation, and on three of them ninety dead mice. The largest number of rats recovered on one ship was twenty.

"The Station hospital was not made use of during the year except for the thirty-eight hospital days of the patient and contact remaining over from last fiscal year.

"Other than the routine vaccination of those members of the staff and members of their families residing on the Station, there were no vaccinations performed here during the year."

William Head, Victoria, B.C.: Quarantine Officer, Dr. C. P. Brown

"I beg to submit the following report covering the work coming under the supervision of this station during the fiscal year April 1, 1929, to March 31, 1930.

"The work is reported as usual under the grouping of divisions—boarding, detention, fumigation, laboratory, lazaretto.

"Boarding Division.—Fewer vessels reported for inspection this year than last, a total of 952 as compared with 1,068 last year. There was a decrease in what is ordinarily called the "tramp freighter" traffic. Passenger traffic showed a small increase during the year. Vessels of British registry comprised 35 per cent of the total traffic, a decrease of six per cent from last year. The Orient still supplies 40 per cent of our vessels. Vancouver is the first Canadian port of call for 62 per cent.

"There was only one vessel quarantined during the year, the last of the smallpox epidemic in the Orient from the previous year. 48 per cent of vessels came from ports reporting some quarantinable disease.

"There have been no outstanding epidemics of quarantinable disease in districts from which our traffic comes. Smallpox has been very widespread, tending to get worse at Hongkong and Shanghai toward the end of the year. Plague has occurred at intervals in its usual haunts, about the Mediterranean, both coasts of South America, the Straits Settlements and at Hongkong for a time last October. Cholera has been prevalent on the Oriental coast and in the Straits Settlements during the winter. Typhus was reported from Dairen. Yellow fever was reported from Brazilian ports. The epidemic of cerebrospinal meningitis died down during the warm weather, and did not recur during this past winter.

"In connection with the work of this division, by authority issued from Ottawa and Washington, "Duplicate Pratique" is now obtainable at William Head and Port Townsend. This treats the international waters of the gulf of Georgia and Puget sound as being subject to coastwise regulations. This station issued thirty-one such duplicate pratique certificates. We received declaration forms covering eleven such as issued at Port Townsend. We issued the first duplicate on January 8, 1930.

"Detention Division.—The bulk of our work under this division was with those Filipinos remaining from the previous year, including the two deaths. Only one case of smallpox was admitted to hospital during the year.

"Fumigation Division.—Eleven vessels were ordered fumigation as coming from plague-infected ports. We advised the respective harbour-masters concerned of the arrival of these vessels. They then enforced rat-guarding regulations and supervised the discharge of cargo until fumigation took place. The remaining vessels were fumigated as routine, in conformity with the regulations. Crews of vessels rather welcome fumigation, not so much as a means of getting rid of rats, as of eliminating the insect pests that so frequently infest their quarters.

"Laboratory Division.—Only the routine work for the patients at Bentinck Island was done this year.

"Bentinck Island Lazaretto.—During the year two patients were returned to China as practically non-infectious and quite able physically to earn their living. The Russian patient was transferred to the lazaretto at Tracadie, N.B. He was very lonely here without other white patients to talk with. There are three patients in whom we can expect further improvement. The best that can be done for the others is to make them comfortable and keep the disease arrested as far as possible.

"Buildings and Equipment.—The architects division, Department of Public Works, have installed an extra fuel oil tank, done considerable renovating of the residences, and assisted our staff in routine repairs by supplying materials and supervision. Both buildings and equipment have been kept ready for work. The question of the providing of electric energy by the British Columbia Electric Company is under discussion. The engineers division, Department of Public Works, had quite extensive repairs carried out on the large wharf.

"Boats.—Both vessels have been kept fit for duty. The condition of the *Madge* has been the subject of much discussion, and a recommendation has been made to replace it with a smaller vessel as more useful and economical. Captain Robertson, of the Marine Department, has been very kind in advising us along this line. Plans have been prepared pending parliamentary action.

"Staff.—There have been no changes during the year.

"Departmental Visits.—There have been no visits from Ottawa during the year. In December I accompanied the Russian to Tracadie, stopping at Ottawa for several days on the return journey.

"We have had various local conferences here with Dr. L. D. Fricks, Senior Surgeon, United States Public Health Service, in charge at Seattle and district, concerning matters of mutual interest, especially the arrangements for duplicate pratique certificates.

"I wish to express to you my appreciation of the good work done by Dr. Tremayne and all members of the staff here and at Bentinck Island, also by Dr. Cartwright at Vancouver.

"I also wish to express to you the appreciation of Dr. Tremayne and myself of the friendly co-operation of associated services, provincial and city, and especially the kind help and co-operation of Dr. Young.

"Other Government services with whom we come in contact, especially the Department of Public Works, have been most courteous and helpful."

The following tabulated statements summarize the work of each division:—

BOARDING DIVISION

Vessels and Persons Inspected—

Total number of vessels inspected	952
Total persons inspected	89,551
as follows:—	
Crew	63,280
First class	6,228
Second class	3,041
Tourist third	7
Third class	3,754
Steerage	13,224
Others	17

Nationality of Vessels—

British	330	(34.7%)
United States	196	(20.6%)

Smears negative for B. Leprae	23

*Montreal Sub-Station: Medical Officer in Charge of Ships' Fumigations,
Dr. G. E. Beauchamp.*

"The inspection and the fumigation of ships were carried out according to the instructions given in 1928.

"The arrangements concluded with the Harbour Commission for the use of one of their buildings as a central warehouse in the harbour and the use of a small store for the material and equipment at Longue-Pointe were again made for the last navigation season.

"The use of a floating dock for the yacht at Longue-Pointe was also arranged with the Harbour Commission.

"The yacht *Jeannette* was used for the inspection and fumigation of ships at Longue-Pointe and in the harbour when possible.

"The number of vessels inspected and fumigated was much smaller than in previous years. This was due to the fact that vessels coming to Montreal to take grain cargoes have decreased considerably during the season.

"As we are expecting a rush of grain boats during the first months of the coming season, we have made preparations for taking care of same in the way of extra equipment and personnel that will be available at a moment's notice, so as to avoid any complaints of delay due to our organization."

*Vancouver Sub-Station: Medical Officer in Charge of Ships' Fumigations,
Dr. C. Cartwright.*

"During the past twelve months the fumigation of vessels with 'Zyklon B' has continued to give satisfaction and many coasting vessels, which are exempt under the regulations, have been fumigated by the companies operating here, at the request of the owners.

"There has been a falling off in the number of vessels fumigated during the past twelve months, especially during December, January and February, as compared with the same period last year; the figures being twenty-seven this winter as compared with fifty-five in 1928-29. This was probably due to the smaller quantity of grain shipped during this winter from Vancouver.

"During the past twelve months 120 deep-sea vessels have been fumigated here and four vessels have been granted exemption certificates.

"Vessels done on remand numbered sixty-four and by request fifty-six.

During the past year, at the request of the department, I have assisted at the examination of twenty-seven pilots, have examined the crews of the customs launches *Despatcher* and *Imperator*, and have also instructed Messrs. Langridge and McGhee, of the Granby Consolidated Mining and Smelting Company, in the use of cyanide gas for fumigating purposes."

LEPROSY AND LEPER STATIONS

Under the Quarantine Regulations of Canada, it is the duty of a quarantine officer to satisfy himself by the presence or absence of obvious signs, whether or not leprosy exists among the passengers or crew on board a vessel arriving at a Canadian port. In the event of this disease being found, the person affected would not be allowed to enter the country, but would be detained in quarantine at the vessel's expense until taken aboard by the same vessel when next outward bound, unless satisfactory reasons be given for further delay. In the event of the vessel failing to take back the said leper, he or she would be deported by the department at the expense of the owners of such vessel.

By authority of the Leprosy Act (R.S. 1927, c. 136), two leper colonies, one at Tracadie, N.B., the other at Bentinck Island, B.C., are administered by the Quarantine Division of the department. In these institutions are segregated all known cases of leprosy in Canada, in accordance with the provisions of the Leprosy Act.

LAZARETTO AT TRACADIE, N.B.

Medical Superintendent, Dr. J. A. Langis

At the close of the fiscal year there were ten patients in this institution—six males and four females—as compared with eight a year ago. One of the new arrivals was transferred from the Bentinck Island lazaretto; the other was a case discovered in Blaine Lake, Sask. Five of the patients show clinical signs of active leprosy; the other five are considered to be arrested cases.

The following table furnishes particulars of the respective patients:—

Patient	Age	Sex	Date admitted	Nationality	Where from
P. D.....	43	M.	May, 1909.....	French Acadian.....	Lameque, N.B.
B. T.....	79	F.	October, 1914....	French Acadian.....	Portage River, N.B.
A. D.....	31	F.	July, 1918.....	French Acadian.....	Lameque, N.B.
J. D.....	68	M.	April, 1919.....	French Acadian.....	Lameque, N.B.
V. de L.....	30	F.	January, 1921....	Scotch and French descent.....	Toronto, Ont.
K. S. J.....	48	M.	October, 1922....	Chinese.....	Montreal, Que.
J. P.....	36	F.	November, 1926..	Russian.....	Blaine Lake, Sask.
P. P.....	86	M.	July, 1928.....	French Canadian.....	Neguac, N.B.
*E. D.....	37	M.	December, 1929..	Russian Doukhobor.....	Verigin, Sask.
N. P.....	25	M.	February, 1930...	Russian Doukhobor.....	Blaine Lake, Sask.

*Transferred from lazaretto at Bentinck Island, B.C.

LAZARETTO AT BENTINCK ISLAND, B.C.

Medical Officer in Charge, Dr. C. P. Brown

At the close of the fiscal year there were nine patients in this institution, all males, this number being three fewer than in the previous year. Two patients were returned to China as non-infectious, and one was transferred to the lazaretto at Tracadie, N.B.

Dr. Brown reports that medicinal treatment was carried on along approved lines. The condition of three of the cases shows some improvement as indicated below; the condition of the remaining six is such that a cure of the disease cannot be expected.

The table below furnishes particulars of the respective patients:—

Patient	Age	Date admitted	Nationality	Where from
F. H.....	44	August, 1916.....	Chinese.....	Victoria.
C. K. W.....	45	October, 1918.....	Chinese.....	Vancouver.
L. A.....	34	November, 1918.....	Chinese.....	Victoria.
L. B.....	39	December, 1921.....	Chinese.....	Vancouver.
C. K.....	50	March, 1922.....	Chinese.....	Saanich, B.C.
W. K. D.....	45	October, 1925.....	Chinese.....	Nanaimo, B.C.
W. H. F.....	28	October, 1927.....	Chinese.....	Vancouver, B.C.
C. W.....	43	August, 1928.....	Chinese.....	Nanaimo, B.C.
L. C.....	82	March, 1929.....	Chinese.....	Vancouver, B.C.

These patients are classified by Dr. Brown as follows:—

Retrogressing slowly	2
Without change	4
Improving	3

One patient only has been bacteriologically negative throughout the year. In March, 1930, six patients showed negative smears.

IMMIGRATION MEDICAL SERVICE

Section 3 of the Immigration Act of Canada provides that no immigrant, passenger, or other person, unless he is a Canadian citizen or has Canadian domicile, shall be permitted to enter or land in Canada who belongs to any of the following "prohibited classes":—

Mentally Defective Persons.

Subsection (a) of section 3 prohibits the landing in Canada of "Idiots, imbeciles, feeble-minded persons, epileptics, insane persons and persons who have been insane at any time previously."

Loathsome and Dangerous Contagious Diseases.

Subsection (b) of section 3 places in the prohibited classes "Persons afflicted with tuberculosis in any form or with any loathsome disease, or with a disease which is contagious or infectious, or which may become dangerous to the public health, whether such persons intend to settle in Canada or only pass through Canada in transit to some other country; provided that if such disease is one which is curable within a reasonably short time, such persons may, subject to the regulations in that behalf, if any, be permitted to remain on board ship if hospital facilities do not exist on shore, or to leave ship for medical treatment."

Physically Defective Persons.

Subsection (c) of section 3 places in the prohibited classes, "Immigrants who are dumb, blind, or otherwise physically defective, unless in the opinion of an Immigration Department board of inquiry, or officer acting as such, they have sufficient money, or have such profession, occupation, trade, employment or other legitimate mode of earning a living that they are not liable to become a public charge, or unless they belong to a family accompanying them or already in Canada, and which gives security satisfactory to the Minister against such immigrants becoming a public charge."

Constitutional Psychopathic Inferiority.

Subsection (k) of section 3 prohibits the entrance of "persons of constitutional psychopathic inferiority."

Chronic Alcoholism.

Subsection (l) of section 3 prohibits the entrance of "persons with chronic alcoholism."

Minor Mental or Physical Defects.

Subsection (m) of section 3 prohibits the entrance of "persons not included within any of the foregoing prohibited classes who, upon examination by a medical officer, are certified as being mentally or physically defective to such a degree as to affect their ability to earn a living."

IMMIGRATION MEDICAL SERVICES OVERSEAS

Under a policy adopted in the autumn of 1927, prospective emigrants to Canada from the British Isles and the countries of Europe are required to undergo medical examination before obtaining permission to come forward. This examination is conducted by Canadian doctors employed by the department. In the British Isles, in addition to the Canadian medical officers stationed at key centres, examinations may be performed by British doctors selected by the department from an official roster. This facilitates the work, particularly in the towns and rural centres.

At the opening of the fiscal year, examination centres in charge of Canadian medical officers were in operation in the following cities:—

England:	Ireland:
London,	Belfast,
Liverpool,	Londonderry,
Bristol,	Cork.
Birmingham,	Wales: Cardiff.
York,	France: Paris.
Newcastle.	Belgium: Antwerp.
Scotland:	Holland: Rotterdam.
Glasgow,	Germany: Hamburg.
Aberdeen.	Poland: Danzig.
	Latvia: Riga.

By the end of the fiscal year the number of these centres had been reduced by eliminating Bristol, Birmingham, York, Aberdeen, Londonderry, in the British Isles, and extending the use of British roster doctors. The examination centre at Riga was also dispensed with.

As regards those immigrants coming direct to Canada from the Scandinavian countries of Norway, Sweden, and Denmark, there being neither Canadian immigration agents nor Canadian medical officers stationed in these countries, all prospective settlers arriving therefrom are subjected on arrival at Canadian ports to the same thorough medical examination as is required in the British Isles and at European ports.

Medical officers of the Immigration Medical Service, Department of Pensions and National Health, act merely in an advisory capacity to the Department of Immigration. It is their duty to diagnose the mental and physical condition of the prospective immigrants presented to them, and to "certify" those who in their opinion are subject to rejection under section 3 of the Immigration Act. Decision as to the acceptance or rejection of those medically "certified" rests with the Department of Immigration.

The increased efficiency resulting from the system of medical examination prior to embarkation may be appreciated when it is noted that, previous to the advent of this policy, at the time when immigrants were medically inspected on arrival in Canada, there were rejected at our ocean ports, on medical grounds, some four hundred persons between the years 1923 and 1927, involving the serious disadvantage to them of being returned to their native land. During the last fiscal year the medical examiners overseas "certified" some 10,907 persons, the majority of whom were thereby prevented from emigrating to Canada, and saved the risk of rejection on arrival in Canada.

**MEDICAL EXAMINATIONS CONDUCTED IN BRITISH ISLES AND ON CONTINENT
OF EUROPE, PRIOR TO EMBARKATION**

1929-30	British			Continental
	By Canadian medical officers	By roster doctors	Totals	By Canadian medical officers

The following is an extract from the annual report of Dr. H. B. Jeffs, Chief Medical Officer of the Overseas Service at London:—

"I beg to submit my report on the work of the Overseas Immigration Medical Service during the fiscal year 1929-30.

"During the period covered the overseas service lost, through retirement or transfer, three of our very promising medical officers in Drs. Currie, Delamere and Nodwell. We have had for varying intervals on temporary duty, Immigration Medical Officers from Canadian ports in the persons of Drs. Chisholm, Ohretien, Couillard, Gouthro, Macaulay and Reid. Since the visit of the honourable the minister and the deputy minister in June, 1929, we have been assisted also by Dr. Williamson, Medical Adviser of the Pensions Branch of the department in London.

"There have been no promotions among the medical or clerical staff, but the department have been able to grant the annual statutory increase for all our permanent personnel. Four stenographers have been taken on the staff during the past fiscal year, and five have retired.

"Following the expressed desire of the honourable the minister that the medical officers of our service should be associated together in their work as much as possible and not isolated, and with a view to economy, there has been considerable rearrangement in the location of our offices.

"In August, following the decision of the Department of Immigration and Colonization to close their office in Riga, we were able to close our office there and transfer Dr. Rolland to Danzig, thereby relieving the situation at the latter port.

"In July we were able to transfer our medical officer from Birmingham to Glasgow, the work of the Birmingham office being done henceforth first from Bristol, and later from London, the office being finally closed in December.

"The Bristol and Aberdeen offices were closed in September, and the medical officers transferred to Liverpool and Glasgow respectively. York and Londonderry offices were closed at the end of December, and the medical officers transferred to Liverpool and Belfast respectively.

"Consequently, at the end of the fiscal year we had offices in the British Isles in London, Cardiff, Liverpool, Newcastle, Glasgow and Belfast, with a continuance of the part-time service in the Irish Free State. On the Continent our offices were stationed at Paris, Antwerp, Rotterdam, Hamburg (covering Bremen), and Danzig.

"The medical personnel consisted in the British Isles of fifteen permanent and one part-time medical officer, and on the Continent, five permanent and one temporary medical officer.

"The clerical staff totalled twenty-one permanent, two temporary, and two part-time clerks and stenographers.

"During the fiscal year 58,103 examinations were conducted in the British Isles by Canadian medical officers, who made 7,817 certifications or 13.60 per cent. On the Continent 56,665 examinations were conducted, but the certifications only totalled 2,034 or 3.57 per cent. *This marked difference in the percentage of certifications is explained by the fact that prospective emigrants to Canada on the Continent are examined one to four times prior to their examination by a medical officer of our service.*

"A considerable difference in the average number of examinations conducted by individual medical officers on the Continent, as compared with examinations conducted by medical officers in the British Isles, will be noted. The medical officers on the Continent are able to do many more examinations each day on account of the extra facilities provided for their examinations, and the assistance they receive from the steamship companies' officials. In the British Isles our medical officers are required to act as ushers in addition to examiners, and lose a very considerable time while emigrants are disrobing and dressing.

"Owing to the loss in personnel it has been necessary to further extend the roster of British practitioners authorized to conduct examinations for our service. The increase on March 31, 1930, as compared with March 31, 1929, is 111.

"Although there is a very large number of doctors on the roster, it is to be observed that more than fifty per cent conducted fewer than eleven examinations during the twelve months, and that in only 0.02 per cent of roster doctors' centres were more than 200 examinations conducted. Out of the total of 553 centres where roster doctors were authorized to conduct examinations, at only 72 of these centres were 50 or more examinations conducted.

"During the fiscal year roster doctors examined 13,877 prospective emigrants and certified 1,056, representing 7.60 per cent.

"We greatly appreciated the visit and investigation of the overseas service by the honourable the minister and the deputy minister in 1929, and par-

ticularly the very excellent advice given in general at our July 1 conference, and individually to each medical officer, by Dr. Amyot on every possible occasion.

"The number of British examined during the fiscal year shows a drop of approximately 18 per cent over the last fiscal year, and on the continent of 14 per cent. This, of course, means actually a much more considerable drop in British emigration on account of the greater wastage. This drop in British emigration is almost entirely confined to the first three months of the present calendar year (1930), when examinations by our medical officers and the roster doctors combined show a drop of 17,000 from the examinations during January, February and March, 1929.

"In my opinion the outstanding happening of the year so far as our service is concerned was the new regulation holding apparently cured trachoma cases for three months before they may be passed. This, I hope, is the beginning of the end of trachoma cases in any state of cicatrization emigrating to Canada. Apart from conditions in Canada such as bad crops and the stock market collapse causing unemployment, I consider the other big factor in deportation of British emigration was due to the harvesters' movement in 1928. At this time it was broadcast throughout the British Isles and Canada that facilities would be afforded immigrants to enable them to get a free passage back to Europe at the steamship companies' or Government expense.

"In conclusion I beg to bring to your attention the loyal support and assistance I have received from all our medical and clerical staff during the fiscal year."

IMMIGRATION MEDICAL SERVICE IN CANADA—REPORTS FROM OCEAN TERMINALS

Those immigrants who on arrival in Canada fail to produce evidence that they were medically examined and passed prior to embarkation, including, as above stated, those coming direct from Scandinavian countries, are subjected to a thorough medical examination on this side. Those holding cards of identity showing that they have been passed by the Canadian overseas medical staff, including those certified cases whose emigration has been approved by the Department of Immigration, are not required to undergo medical examination on arrival. When, however, symptoms are apparent indicative of abnormal conditions, which may have developed since they were originally examined, a further medical examination is required.

The following table shows the monthly arrivals at Canadian ocean ports, according to figures supplied by the Department of Immigration:—

MONTHLY ARRIVALS OF IMMIGRANTS AT CANADIAN OCEAN PORTS

Fiscal year 1929-30	Quebec	Halifax	St. John	Sydney	North Sydney	Montreal	Vancouver	Victoria	Monthly

Immigrants arriving at Canadian ocean ports who require medical attention are detained in departmental hospitals until they are fit to travel. For this service the respective steamship companies are charged at the following per diem rates:—

Infectious diseases contacts not confined to bed, including persons accompanying the sick.....	{ Children under 10 years of age.....	\$1.00
	{ Adults.....	Free.
Sick, bed cases.....	Adults and children.....	\$2.00
		3.00

The following table indicates the reasons for detention at the respective ports. It includes the cases detained for medical observation, also the minor infectious diseases—measles, chicken-pox, etc., treated at the Immigration Hospital, Quebec, and the Rockhead Immigration Hospital, Halifax. At the port of St. John, minor infectious diseases are treated at the Quarantine Hospital on Partridge Island and are reported under the Quarantine Service.

Immigrants arrive at ocean ports from time to time with physical defects which are not considered sufficiently serious to justify their certification as "prohibited" of entry under section 3 of the Immigration Act. A medical record is kept of such cases, however, for possible future reference.

DEPORTATIONS FROM CANADA AFTER ADMISSION, ON ACCOUNT OF PHYSICAL AND MENTAL DEFECTS

During the fiscal year, a total of 928 persons were deported from Canada by the Department of Immigration on account of becoming public charges due to mental or physical defects which either existed prior to their admission to this country or developed within five years of their arrival, the time necessary to acquire Canadian domicile. With a view to checking up the thoroughness of the medical examinations overseas previous to embarkation, before these people are deported from Canada they are detained at Montreal for a competent examination by a medical officer of the department for the purpose of ascertaining, so far as possible, if the medical condition on which their deportation is based pre-existed their entry to Canada, also if it is sufficient to justify return to their home country. From this double checking it is apparent that the large majority of these deportees were physically fit to carry on when they were admitted to Canada; moreover, that whereas a certain percentage of them developed various disabilities subsequent to their arrival, in a high proportion of such cases the disability is so slight that it must be concluded that had they found conditions in Canada to their liking they could have made good; in other words, that they must be classed as malingerers.

LABORATORY OF HYGIENE

Reinspection has been made during the year of all Canadian plants which are under licence to manufacture biological products for human use. They were all found to be in a satisfactory condition. To a plant which was refused a licence last year, a licence was granted this year, as all requirements of the regulations under the Food and Drug Acts had been finally complied with.

On the basis of last year's inspection of clam beds in Nova Scotia, licences have been certified to a further number of shippers of clams to United States markets.

Tests for sterility and potency of biological products on the market, phenol coefficients of disinfectants, clinical diagnosis and others have been made to the number of 778 in the year just closed, and several products have in consequence been denied the Canadian market.

The laboratory has now completed its standard ouabain for manufacturers of tincture of strophanthus, and has distributed samples of it and other standard preparations to several manufacturers in Canada, Great Britain and the United States.

New methods for biologic and bacteriologic assays are being tested out, looking towards better and more accurate results being obtained.

Scientific papers have been prepared, presented and published by members of the staff, and others are in course of preparation.

Additions have been made to the equipment of this Laboratory which will lead to further extension of work.

Some of the Quarantine Station laboratories have been inspected and equipment, added to, and changes of present equipment are contemplated in certain respects to bring these laboratories up-to-date.

As formerly, the laboratory has taken part in problems of investigation in conjunction with the staff of the Food and Drug Laboratory, and has afforded consultant service and practical help to the local medical profession, with fruitful results.

DIVISION OF VENEREAL DISEASE CONTROL

During the past year very satisfying results have followed our efforts along the line of venereal disease control.

Due to a wider knowledge of the work done in the free venereal disease clinics, together with the untiring and sympathetic service rendered by the doctors on duty in these clinics, there has been displayed by patients and the public in general, a marked increase in confidence and co-operation.

From our own observations and from the opinion expressed by many actual workers in the field scattered throughout the Dominion, the present situation may be summed up as follows:—

There is no reliable evidence to suggest any material increase in venereal disease during the past five years.

The general source of venereal disease (i.e., promiscuous intercourse) is ever present, but has shown the effects of altered social conditions, in that with the decrease in commercialized prostitution there has been undoubtedly an increase in the ranks of the amateur and semi-professional operator. Those individuals contributing to this increase, however, are in all probability those who would have repeted the wastage in commercialized prostitution were that institution still in existence.

There is to-day an increasing intelligence on the part of the average patient attending clinics with regard to his condition and the requirements necessary in his conduct and co-operation during treatment.

It is generally believed that there is an increase in the number of early cases of syphilis presenting themselves for treatment, and a decrease in late and congenital cases, and little or no change in comparative numbers of gonorrhœa. The increase in early syphilis cases, above mentioned, is believed to be due to the effects of educational propaganda and the increasing realization on the part of the public as to the seriousness of this disease and the necessity for early diagnosis and adequate treatment.

The majority of clinicians believe that the particular type of advertisement or propaganda so far most effective is that of the "satisfied customer" or, in other words, the ex-clinic patient. This has been borne out by conversations with many patients, who stated that they were recommended to go to the clinic for treatment by friends who had either been patients themselves or had known patients clinic treated. In the old days many of these individuals would have been recommended by friends to go to a "quack" or to the corner drug store or some advertised patent medicine.

This has been particularly noted in connection with women patients, who are naturally averse to seeking medical aid for venereal disease. The nurses attached to the clinics carry out a follow-up service with regard to the women patients, and as a result of the friendly professional relationship between nurse and patient, the latter is prevailed upon to remain under treatment longer than she otherwise would, and through one patient the nurse frequently gets in touch with another who is then persuaded to obtain clinic treatment. It is generally conceded that the friendly "personal touch" obtaining in an efficient clinic staff is a more efficacious form of education than lectures or literature propaganda, although the latter have their place as well in the general campaign against the evil of venereal disease.

Compulsory treatment of infected individuals confined in jails, penitentiaries, etc., is another feature which is progressing satisfactorily in the general scheme of venereal disease control.

During the past year there has been a further improvement in co-operation on the part of the general practitioner with the provincial health authorities as regards reporting the number of venereal disease cases under private treatment. This is very encouraging and it is hoped that very soon this co-operation will be such as to make possible the compilation of reliable statistics, yearly comparisons of which will indicate the variance in venereal disease incidence throughout the country.

The provincial government expenditures in connection with venereal disease control are augmented by the federal Government grant of \$100,000 allotted as follows:—

Alberta	\$ 6,504 21
British Columbia	5,798 23
Manitoba	6,743 67
New Brunswick	4,287 22
Nova Scotia	5,790 00
Ontario	32,425 93
Prince Edward Island	979 47
Quebec	26,098 47
Saskatchewan	8,372 80
Department of Pensions and National Health for administrative purposes	3,000 00
Total	\$100,000 00

DIVISION OF CHILD WELFARE

MATERNAL WELFARE

This subject continues to occupy a foremost place at meetings of medical and other associations, in the daily press and in medical journals.

Canadian Medical Association.

The Maternal Welfare Committee of the Canadian Medical Association continued its work during the year and presented its first report at the annual meeting of the association in June, 1929, in Montreal.

The report reads in part as follows:—

"In considering the question of maternal welfare your committee undertook an analysis of the available vital statistics of the country and was impressed by two outstanding facts: first, that a very large percentage of the mothers who died had had no ante-natal care; and second, that a remarkably large number of deaths was due to two causes, viz., the toxæmias of pregnancy and puerperal infection, diseases which, in view of recent advances made in obstetric practice, might almost be placed in the class of preventable diseases.

"Your committee, therefore, came to the conclusion that existing conditions might be greatly improved by educating the public as to the value of ante-natal care, and by impressing on the profession the necessity of giving to each expectant mother intelligent and conscientious ante-, intra- and post-natal care.

"Regarding the education of the public it was found that the women of the country had already become active in this field through a Committee of the National Council of Women of Canada.

"Your committee would recommend that this work receive the endorsement of the Canadian Medical Association.

"Regarding the profession, your committee begs to recommend that a list of suggestions concerning the management of obstetrical patients, a copy of which is herewith submitted, be sent to each medical practitioner throughout the Dominion, either direct from the Canadian Medical Association headquarters, or through the provincial, district or county societies.

"Your committee further recommends that in each provincial, district and county medical society at least one meeting each year be set aside for the consideration of preventive obstetrics."

The report was received and adopted and the committee was continued for the year 1929-30.

Academy of Medicine, Toronto

Another Committee on Maternal Welfare which has continued its work during the year is that appointed by the Academy of Medicine, Toronto. The president, Dr. F. W. Marlow, stated in his annual report that this committee is one of the most important ever appointed by the academy and that it has "done much commendable work, placing the academy well to the front in the consideration of this very important phase of public health. There are many years' work ahead of them and it is hoped that the entire fellowship will encourage their efforts to promote harmonious discussion and activity. Great care should be taken to continually strengthen this Committee and to have it thoroughly representative of all interests."

A special meeting of the council of the academy was held for the consideration and approval of this report.

Federated Women's Institutes

At the Sixth Biennial Convention of the Federated Women's Institutes of Canada held in the University of Saskatchewan, Saskatoon, Sask., June 17-21, 1929, the Special Committee on Maternal Welfare reported in part as follows:—

"When considering the question of pre-natal care one's thoughts are apt to be confined to the narrow limits of its clinical aspect on the threshold of which Institute members as such would certainly be justified in protesting, 'There is nothing we can do'. Fortunately there is a much wider field than that, as our medical men were quick to point out, a field in which institute members can do something."

Other Voluntary Societies

The Victorian Order of Nurses, St. Elizabeth's Visiting Nurses' Association, the Babies' Dispensary Guild of Hamilton, the London Child Welfare Association, the Child Welfare Council of Calgary, the Canadian Council on Child and Family Welfare and other organizations have made great efforts to put forward the necessity for pre-natal care. The London Child Welfare Association writes, "Each time any of our nurses gives a talk on child welfare she stresses the pre-natal side of the work. In fact, ever since your report on maternal mortality called special attention to this field, this propaganda has gone on here and we feel is now beginning to get results." The infant mortality rate for London is 58.7 and there is a marked reduction in neo-natal mortality.

National Council of Women

At the annual meeting of the National Council of Women at Saskatoon on June 12, 1929, the report of the Special Committee on Maternal Care received much attention. This committee recognized its function to be the promotion of interest and activity in local communities in reference to maternal mortality and maternal welfare and to this end issued letters, questionnaires and leaflets on these subjects which met with marked appreciation.

INFANT MORTALITY AND MATERNAL MORTALITY

The Preliminary Report of Vital Statistics of Canada for 1929 issued by the Dominion Bureau of Statistics gives the following figures:—

INFANT MORTALITY

Deaths of children under 1 year (exclusive of still-births)—

1926	23,692
1927	22,010
1928	21,195
1929	21,657

88,554

INFANT MORTALITY—*Concluded*

Rate per 1,000 living births—

1926	101.8
1927	94.0
1928	89.5
1929	92.2

MATERNAL MORTALITY

Deaths from puerperal causes—

1926	1,317
1927	1,300
1928	1,331
1929	1,337

5,285

Rate per 1,000 living births—

1926	5.7
1927	5.6
1928	5.6
1929	5.7

In some parts of Canada the infant mortality in 1929 was less than 50 per 1,000 living births and the Victorian Order of Nurses, who took care of 14,218 obstetrical cases under the direction of physicians in 1929 had only 28 maternal deaths, or 2 per 1,000 living births.

CHILDREN NEEDING SPECIAL CARE

Disabled Children.

Perhaps more progress in work for disabled children has been made this year than ever before. The preliminary and informal Conference on Dominion Organization for this work, arranged by request to take place at this department on November 23, 1929, the organization of the Quebec Provincial Society for Crippled Children in Montreal on February 11, 1930, by representatives of thirty-seven different agencies in the province of Quebec, the Annual Meeting of the International Association for Crippled Children at the Royal York Hotel, Toronto, March 17-19, and the remarkable success of the efforts of public health officials, physicians, parents, the press and the general public in the summer and early autumn of 1929 to protect children against anterior poliomyelitis all combined to place work for disabled children in Canada on a better basis.

Mental Health.

Alberta.—An important Survey on Mental Disease and Mental Defect was conducted in Alberta in December, 1929, and January, 1930, by a Mental Hygiene Commission. Early examination and treatment where necessary, children's clinics, and a new institution for mentally defective children are among the recommendations of the commission.

Under-Nourished Children.

The important subject of malnutrition continues to receive attention, and assistance has been given to child welfare workers in preparing diet-lists for under-nourished children.

The Pre-School Child.

Increased attention has been given during the year to the health and welfare of the pre-school child.

Four special clinics for pre-school children were opened in Toronto in February, 1930. It is now generally recognized that most of the defects and diseases of children originate at this time and preventive measures therefore are then most successful.

NATIONAL RESEARCH COUNCIL

Tuberculosis.

At the meeting of the Tuberculosis Advisory Committee of the National Research Council, the chief subjects of interest in connection with Child Welfare were:—

The report of Dr. R. G. Ferguson, on Tuberculosis Research and treatment for Indian School Children at the File Hills Reserve and the Fort Qu'Appelle Reserve, the extension of this work to pre-school children and the means taken to secure medical and public health nursing care for these children and the report of Professor Klotz, University of Toronto, of further work done by Dr. Rae Price re "Tuberculosis in Children" and the pasteurization of milk.

DEPARTMENT OF IMMIGRATION AND COLONIZATION

Women's Branch.

Constant co-operation has been maintained with the Women's Branch and we are much indebted to the superintendent for making it possible for us to help a number of mothers and children, unaccompanied women coming to Canada and domestic assistants.

JUVENILE DELINQUENTS

THE JUVENILE DELINQUENTS ACT

An Act respecting Juvenile Delinquents, amended, was passed by the House of Commons on May 20 and by the Senate with further amendments, on May 28. These amendments were concurred in by the House of Commons on June 3, 1929.

The Juvenile Delinquents Act was proclaimed in Moncton and King's county, N.B., and in the county of Hants, N.S., as announced in the *Canada Gazette* of January 4, 1930.

JUVENILE DELINQUENTS AND TRUANCY

On January 31, 1930, a deputation was received by the Prime Minister of Ontario. The deputation stated that:—

"1. There are a large number of boys and girls becoming delinquent whose educational background does not fit them for industrial life.

"2. It is exceedingly difficult to place large numbers of boys and girls in employment because of their lack of adequate training.

"3. The majority of our vagrants, truants and serious behaviour problems have been found to be those of the non-academic class.

"4. These boys and girls are going out into industrial life, not only unprepared but in many cases with an anti-social attitude, due to conditions which compel them to take certain school training for which they are not fitted.

"In view of these facts we believe that there is an urgent need of a change in the character of the training given to certain types of children; and would suggest that certain schools or classes be set aside for special training of the non-academic children who will be entering our trades and industries.

"These points were supported by a signed statement from the Head of the Employment Department, Massey-Harris Company, showing that for 1,499 boys under the age of twenty who left the employment of the Massey-Harris Company voluntarily, or were discharged for cause, from January 1, 1922, to December, 1929, the average length of service for each boy was nine weeks; 115 were employed for one day only, and only 107 were employed for over six months and stating 'that the bulk of these boys belong to the non-academic class who do not care for the normal type of public school education.'

"A committee appointed by the Teachers' Institute, No. 6, Toronto, to make a study of the 'Non-Academic Problem in Toronto Public Schools' submitted the following:—

"WHEREAS

"1. According to statistics gathered from the reports of twelve representative schools, 39 per cent of the pupils in the Junior 1st to Senior 3rd Grades inclusive, repeat their grades from one to four times before promotion is gained.

"2. These repeaters are costing the Board of Education \$90 per year, per pupil.

"3. According to the psychiatric reports, 52 per cent of our public school pupils are non-academic."

"4. Principals of schools find that these pupils provide almost all our delinquents.

"5. The non-academic child being compelled to pursue the present public school course of study, often becomes discouraged, rebellious and anti-social.

"6. We believe the present course of study and equipment fails to meet the needs of the non-academic child.

"7. Because of inadequate training, too many boys and girls are leaving our public schools at the ages of fifteen to sixteen years, to drift through life.

"We, therefore, beg to suggest that certain public schools or portions thereof, be equipped for the training of 'non-academic' children."

Principal Richardson of the Regal Road School states that "at an age when most children expect to graduate into high school, namely, at fourteen years, there are 1,107 pupils 14 to 17 years of age, just *beginning* their third grade work for the *second time*. It is for these non-academic pupils possessing talents the standard course fails to develop, that a different training should be offered."

Some progress has been made in this matter of providing for "non-academic" pupils but it is still under consideration.

YOUNG PERSONS IN PENITENTIARIES

In the estimates passed by the House of Commons on June 14, 1929, the sum of \$600,000 was set aside to establish two institutions for the reception and training of juvenile adults serving terms in penitentiaries. Out of 2,769 inmates cared for in our penitentiaries during the official year ended March 31, 1929, those under twenty years of age numbered 322 and those between twenty and thirty years numbered 1,274.

In the sessions of the American Prison Association in Toronto, September 18-28, 1929, Borstal methods and other methods of prison reform for juvenile delinquents occupied a large part of the program.

CORRESPONDENCE CLASSES

The following provinces have now established Correspondence Classes: Nova Scotia, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia. There has been a great increase in this work during the year. Letters written to the parents of correspondence class pupils in co-operation with the provincial Directors of Correspondence Classes have resulted in many inquiries in regard to child welfare and requests for "The Little Blue Books."

The following reports are quoted:—

Alberta.—"The work has increased tremendously. This was due to some extent to the fact that a large number of schools had to close early in the winter because of lack of finances consequent upon a partial crop failure. An extremely cold winter, too, prevented many pupils from attending schools which were operating, and it was here that the Correspondence School was able to be of service to a very large number of under-privileged children.

The work has meant something to a large number of pupils all over this province. Even to touch the homes with their problems does count for something, I find, and I am so glad to feel that something worth while may have been accomplished."

Saskatchewan.—"The scope of this school has been broadened to include children whose homes are more than 2½ miles from schools, if they are under 12 years of age, and those whose homes are more than 3½ miles from school, if they

are over 12. It also provides for those whose schools are closed during the winter months, with particular attention to those who are preparing to write the entrance examination. Our present enrolment is about 200 pupils."

British Columbia.—In this province there are three divisions of the work, including Correspondence Classes for public school pupils who are too far away from any school to attend regularly, also a series of classes for boys who have left school and are beginning coal mining and other work. These last are called Correspondence Classes in Coal Mining. In September, 1929, classes in high school subjects were offered for the first time and there is now an enrolment of about five hundred pupils.

SCHOOL CARS

The following is an extract from a letter received from the principal of a School Car in Ontario:—

"Everything seems to be going along very nicely on the school car. The attendance is nearly always perfect, and the pupils are doing good work. They seem to make good progress at every point. My attendance has increased since last year, both in day and night school. The night school is quite interesting. I have several men who are getting along in years, in fact I have one man who is fifty-nine years old. It is surprising the progress that this man has made in the short time that he has been attending. We hope that the younger pupils will be bigger and better Canadians when they grow up. I find that these people are ready and willing to make changes and improvements in their ways of living, if they only know how to do this."

ESKIMO CHILD WELFARE

By invitation of the Deputy Minister of the Interior, the subject of Eskimo child welfare and protection was brought before the Northwest Territories and Yukon Council at their meeting on January 15, 1930, and plans were suggested to secure the same.

A good deal has been done during the year to advance the welfare of the Eskimo. Another medical officer has been appointed, radio stations have been established, a large herd of reindeer is on the way to the Mackenzie Delta and the air mail reaches within the Arctic Circle. As Mr. D. Jenness points out in a memorandum, the future of the Arctic rests entirely with the Eskimo. "For no other people will live there permanently. With training and guidance from Europeans, they have greatly enhanced the value of Greenland and Alaska to the nations that own those countries, and with similar guidance they could develop our own Arctic domain."

"After we have studied the native problem over the world, we have come to the conclusion that in the last analysis the native problem is a moral one."—Hon. Charles Stewart.

During the month of November all eyes were turned to the Arctic. On November 4 word was received by wireless of the rescue of the MacAlpine party who had not been heard of since September 9. On his return, Colonel MacAlpine said that all the party were extremely grateful to the Eskimos who had been fathers to them in their time of need. It was stated repeatedly in the press that the party was saved by the Eskimo, who guided the party from Dease's Point to Cambridge Bay.

Major Burwash stated recently that he never travels in the Arctic without an Eskimo guide, no matter how short the distance may be.

INDIAN CHILD WELFARE

Conferences have been held with the Deputy Superintendent General of Indian Affairs, Dr. D. C. Scott, and later, at his request, with Dr. E. S. Stone, Director of Medical Services, in reference to child welfare among the Indians.

CO-OPERATION WITH VOLUNTARY SOCIETIES

Opportunities which occur daily, for co-operation with the Women's Institutes, Homemakers' Clubs, Cercles des Fermières, Victorian Order of Nurses, National Council of Women, Imperial Order of the Daughters of the Empire, Women's Missionary Societies, Catholic Women's League, Visiting Nurses' Associations, Canadian Council of Child and Family Welfare, Children's Aid Societies, Child Welfare Associations, Boy Scouts, Girl Guides, and other voluntary societies, form an important part of our work and are always accepted and appreciated.

Conference of Voluntary Societies

At the request of a number of voluntary societies with Dominion organization, a conference was arranged to take place at the department in November, 1929. Thirteen societies were represented. The discussion included a description of the organization and work of each association which showed that child and maternal welfare forms a very large part of their work.

INTERNATIONAL COUNCIL OF NURSES

The meeting of the International Council of Nurses in Montreal in July, 1929, was an important event and had a bearing on child welfare. The members of the Grand Council were received on July 3 at the Parliament buildings, by the Prime Minister.

By request, a supply of "The Little Blue Books" and "Request Cards" was placed in a booth of the Council Exhibit at the Montreal High School. This booth was visited by a large number of nurses and the supply of "The Little Blue Books" had to be renewed three times. Many Request Cards were filled out and returned to the Department.

PUBLICATIONS

The publications of the division, known as "The Little Blue Books," have had a wide circulation during the year, thanks to the valuable co-operation of the provincial authorities, the clergy of different churches, the local registrars of births, the Women's Institutes and other voluntary societies, and the help of the press. Two numbers of a new series—"The Leaflet Series"—have been published:—

National Health Publication No. 43, "Rickets: Prevention and Cure."

National Health Publication No. 51, "Keep Him Well: Be Prepared to Prevent Infantile Paralysis."

The more important parts of the latter, by the co-operation of the Canadian press, appeared in most of the newspapers of Canada and several newspapers republished it in full. About 65,000 copies of the leaflet were distributed and over four hundred additional requests were received before the end of the year, after the supply was exhausted.

In regard to the former, the principal of a school in Ontario writes of one of his pupils—a girl of fifteen—who will marry this year: "There are fourteen in her family. The children have bent limbs. She picked up 'Rickets.' She was surprised to hear that sunlight is something like a food. She asked, 'Is that why the agent at Ruel put the baby out even on cold, cold days?' What she will retail to her sisters, aunts, cousins, etc., will get more attention than anything we could say to them. She is a girl who can be a missionary."

The other "Little Blue Books" were distributed as usual and seem to have an increasing place among new Canadians, as well as among the general public. A teacher in Saskatchewan sends a list of Ukrainian ratepayers in his school

district: "Would you kindly send a set of Blue Books to them? The books sent to my school have been in constant use and they are not enough to go around."

An inspector of schools in British Columbia asked for a complete set of "The Little Books" for each of the seventeen Doukhobor schools of his inspectorate.

The wife of a missionary on an Indian reserve writes: "I have taken the Canadian Mother's Book around with me and shown the pictures to the Indian women. A week or so ago a group of them came and suggested that I translate it into Cree. They asked why the Canadian Mother's Book isn't also 'Kukinow Ininu Isquao o musin aikin'—Every Indian Woman's Book."

"The Canadian Mother's Book" was rewritten and enlarged during the year and the new edition will shortly be published.

The most encouraging letters received by this division are letters from mothers. A mother in the outposts writes, "I intend letting other farm women like myself know about those books so full of valuable information to lonely farm folks."

Requests for "The Little Blue Books" have been received from all parts of Canada, including the Magdalen Islands and Hay River on Great Slave Lake; also from the British Isles; Madras, India; Colombo, Ceylon; Australia, New Zealand, South Africa, the United States of America, Germany, Holland and Belgium.

DIVISION OF HOSPITAL ADVISORY SERVICES

The pertinent inquiries concerning hospitals of the Dominion, made at the International Hospital Congress, held at Atlantic City, N.J., U.S.A., June, 1929, emphasized the necessity of a medium or channel whereby consultative advice on planning, equipment and general data on hospitalization might be available.

The congress, treating the question internationally, passed a resolution advocating that central bureaus were essential if hospital work was to progress on parallel lines with the advance being made in other phases of human welfare, and results would only be obtained by centralization.

The Division of Hospital Advisory Services is fulfilling the demand as outlined above by its activities in advising in consultation with provincial governments, municipalities, hospital boards and others upon the many phases of hospitalization, comparable to the requirements of health measures being practised to-day.

Bibliographies are compiled by request upon any subject coming within the scope of the division.

The Canadian Medical Association's Annual Report, 1930, refers to the much needed advice of this division as a supplement to its own study of general problems, and further expresses appreciation of the close co-operation existing.

The exhibit of Canadian hospitals at the International Hospital Congress excited the enthusiasm and interest of the delegates. Those from Egypt, Germany and South Africa desired that copies of plans of some of the buildings be forwarded to them.

One prominent feature of the exhibit presented by the department was that for the insulation of buildings, both for sound and climatic conditions. The method developed by the division for outlying districts of the Dominion was deemed to be suitable to meet similar conditions which prevail in Norway, Poland, Switzerland and Australia.

The principle, practice and construction of infectious diseases hospitals, as observed in other exhibits at the congress, rather emphasized the fact that this phase of hospitalization has not yet been fully grasped by those responsible for such units.

When it is realized that about one out of every sixty people suffer each year from infectious disease, it can be readily seen that the subject of communicable disease is well worth serious consideration by those people interested in the health of the people.

It is generally considered that a community, for its own protection, is responsible for the care and treatment of its cases of communicable disease. A hospital is part of a community, so it would seem reasonable to suppose that a general hospital in a community, where no other provision is made, should at least feel some responsibility for the treatment of cases of infectious disease.

The economic loss due to the method of handling communicable diseases in rural parts of the Dominion must be considerable; besides which there is the disadvantage of the possibility of improper isolation with the resultant spread of disease in and out of the house, to say nothing of the possibility of the patients themselves having less efficient treatment.

The considered opinion of outstanding hospital authorities to-day is that the ordinary general hospital, in respect of communicable disease, should assist in the provision of adequate facilities for the isolation and care of communicable disease.

Sanatoria, a subject exciting the interest of most people to-day, formed a prominent part of the exhibit. The principal phases stressed were orientation, co-ordination and cost.

Marked progress is being made in the education of patients of school age in sanatoria.

Heliotherapy is playing a larger part than ever in the treatment of tuberculosis. In fact, no sanatorium worth the name would be complete to-day without the plan of including facilities for such treatment.

It would seem that exhibits, similar to the one now under review, should be available at all such meetings and amplified so as to include all kinds of hospitalization throughout the Dominion.

The officials of the International Council of Nurses Congress, held in Montreal, July, 1929, requested that the exhibit be available at that congress, which request was acceded and, in the words of the chairman of the committee, the officials were grateful to the Government for its gesture in providing such an educational exhibit, and further that it had been most beneficial to those interested in such work.

The division advised on many projects during the fiscal year and an enumeration of these is deemed of interest, namely:—

General Hospital, Kentville, N.S.

Aberdeen General Hospital, New Glasgow, N.S.

General Hospital, Havre St. Pierre, P.Q.

Grace Dart Home Hospital, Montreal, P.Q.

Convalescent Hospital, Montreal, P.Q.

Bruchesi Institute, Montreal, P.Q.

University of Montreal, Montreal, P.Q.

Hotel Dieu, Chicoutimi, P.Q.

St. Michael's Hospital, Lethbridge, Alta.

Rural Tuberculosis Hospitals for Western Provinces.

General Hospitals, North West Territories.

Public meetings were held in connection with some of these projects and addressed by the director of the division, tentative sketches prepared and consultations held with provincial Government officials, as also medical and hospital boards.

With the view of furthering education upon hospitalization, a series of articles is now appearing in the Journal, Royal Architectural Institute of Canada, under the caption of "Hospitals—Their Planning and Equipment."

By arrangement with the Canadian Medical Association, these articles are available to the members of that organization, the result anticipated being that, with the combined efforts, many of the blunders perpetrated in the past may be averted.

At the request of the University of Toronto, lectures were given by the director of the division to the students in the Diploma in Public Health Class, covering hospitalization of infectious diseases.

In these lectures, emphasis was made that actual experience on this Continent and Europe has established the fact that asepsis and not the interruption of air currents is the basic factor in controlling infection in hospitals.

Up to the time of Pasteur, Koch and other bacteriologists, practically nothing was known about the causes and modes of transmission of infectious disease. Previous to their discoveries it was believed that these epidemic diseases had their origin in decayed matter, bad smells, arose from swamps or were visitations of the wrath of God, and it is little wonder that hospitalization and home isolation have had a very recent origin.

Previous to 1890, it was universally believed that infectious diseases were transmitted principally by air, and it was not until the year 1900 that the Pasteur Hospital in Paris was constructed and was the first hospital to isolate in different rooms on the same ward floor different kinds of infectious diseases, as also the first to embody the principle that contact infection is the only real factor in the spread of infectious diseases.

Another pertinent remark made in the lectures was that to interrupt contact, direct and indirect, between patients in a hospital ill with different contagious diseases, depends upon proper construction, equipment and administration.

Isolation hospitals of less than fifty beds are not economical to administer and should be attached to general hospitals where the expense will be less, better service rendered and, if properly managed, this can be done with safety.

Inter alia, it may be noted that the infectious diseases hospitals administered by the department have, in a large measure, been remodelled to conform with this modern conception and treatment of persons suffering from infectious diseases.

The division has been consulted upon the growing urge for convalescent hospitals for patients other than those suffering from acute diseases in general hospitals.

Every building is the expression of a utilitarian, and sometimes, also, of an artistic idea. Modern city conditions led to the development of skyscrapers. Our newer hospitals are likewise the result of economic necessity and the demands of modern medicine. The hitherto undeveloped possibilities of convalescent hospitals create a demand for adequate housing of this new social function.

The present-day idea of convalescent care is that of a creative, dynamic force, bringing into play all the resources of mind and body, of medicine and psychology, to offset the baneful effects of illness. It comprises play as well as rest; it invokes religious emotion and an appeal to reason; it calls for the exercise of mind as well as muscle; it furnishes comforts and stimulates purposeful effort; it provides dressings for surgical wounds and instills sound health habits; it aids the natural recuperative processes and develops social discipline; it expedites recovery and strengthens character.

The carrying out of this multiple aim requires policy, organization and an adequate plant.

The management of convalescent hospitals is also as difficult and quite as important as is the practice of medicine itself. In fact, in many instances, it is so intimately bound up with medicine that the two can not be successfully dissociated. The time has passed when some philanthropically inclined in-

dividual could donate or hire a farm house in the country, install a cook and a trained nurse on the premises, supply food and lodging, pay all the bills, and thus successfully promote convalescence. A place is not a convalescent home simply because it is in the country. Confusion as to just what convalescence means exists in the minds of many persons concerned; not only among the lay public, but among the physicians themselves, and only by a careful perusal of the problem it can be appreciated how complicated a matter it is to restore people, who are cured by the hospital, to a state of health where they can adequately bear the stress and strain of modern economic conditions.

If facilities for the entertainment and amusement of patients in convalescent homes are not provided, they readily fall into groups, talking about themselves, their ailments, their hospital experiences and their troubles, the worst possible atmosphere in which to regain health. What is required is supervised leisure, not idleness.

When those interested in convalescence measure the usefulness of their work by the quality of the service rendered, rather than by the number of persons passing through their doors, the whole subject will be placed on a sounder basis.

It is a great thing to care for and heal the sick, but it is no mean task to restore a man to health and render him able to play his part in life.

The philosophy of convalescent management is in its infancy. Continuous constructive criticism is needed if forward strides are to be made in this realm, the importance of which is gradually becoming recognized in the fields of curative as well as preventive medicine. There is more than a likelihood that under the pressure of economic and medical forces, increasingly larger investments, both philanthropic and municipal, will be made in convalescent institutions.

Housing is a live issue and plans and advice have been prepared and distributed in a generous measure throughout every Province in the Dominion.

The Quarantine Stations, Immigration Hospitals and Food and Drug Laboratories have further been remodelled to meet the requirements of the services, as also plans prepared for future projects when exigencies of the moment permit consummation.

The new Animal Breeding House for the Laboratory of Hygiene of the department sounds a new note in such projects, by featuring modern practice in insulation, heating, lighting and ventilation.

DOMINION OF CANADA

DEPARTMENT

OF

PUBLIC PRINTING AND STATIONERY

ANNUAL REPORT

FOR THE FISCAL YEAR ENDED MARCH 31

1930

OTTAWA
F. A. ACLAND
PRINTER TO THE KING'S MOST EXCELLENT MAJESTY
1930

*To His Excellency the Right Honourable Viscount Willingdon, G.C.S.I., G.C.M.G.,
G.C.I.E., G.B.E., Governor General and Commander in Chief of the Dominion
of Canada.*

MAY IT PLEASE YOUR EXCELLENCY:

The undersigned has the honour to present to Your Excellency the Annual Report of the Department of Public Printing and Stationery for the year ended March 31, 1930.

I have the honour to be,

Your Excellency's most obedient servant,

C. H. CAHAN,

*Secretary of State and Minister charged with administration of
Department of Public Printing and Stationery.*

OTTAWA, September, 1930.

INTRODUCTORY STATEMENT

SIR,—The fiscal year has passed without particular feature, activities of all branches continuing at a high level. The gross cash turnover for the year was \$8,211,753.63, or \$760,757.63 more than for the preceding fiscal year; this increase is reflected in the two main divisions of the department, printing sales for the year at \$2,482,866.95 showing an increase over the previous year of \$294,526.13, and stationery sales showing at \$1,440,339.64, an increase over the previous year of \$96,312.26. Sales of publications on the other hand showed a reduction, the revenue dropping from \$66,606.87 for the fiscal year 1928-29 to \$55,972.68 for the past year, but the reduction is explained by the extensive sales during 1928-29 of sets of the Revised Statutes of Canada, 1927, large numbers of copies of which were purchased by departments and by the public; the expenses during the year were correspondingly reduced. In the case of the *Canada Gazette* the receipts at \$93,890.47 were \$13,676.51 in excess of those of the preceding fiscal year; the expenditure at \$34,783.83 was \$124.09 less. The revenue from waste paper amounted to \$16,700.04, \$2,800 more than for the preceding year; this refers to waste paper of all departments, the revenue being derived from a contract secured by tender and spread over a number of years.

PERSONNEL

The personnel at the end of the year varied but fractionally from the figures of a year earlier, standing on March 31, 1930, at 715, as compared with 714 a year earlier. The figures at different periods during the past forty years have been as follows:—

1891 (December 31).....	341	1922 (March 31).....	742
1901.....	511	1923.....	705
1911.....	861	1924.....	719
1915.....	1,160	1925.....	685
1916.....	1,240	1926.....	689
1917.....	1,300	1927.....	690
1918.....	1,169	1928.....	696
1919.....	1,134	1929.....	714
1920.....	703	1930.....	715
1921.....	730		

It became necessary during the year to create nine new positions, several of which, however, replaced positions which had become unnecessary and were abolished; the net result of the changes was an increase from 697 on August 1, 1927, to 701 on March 31, 1930, in the number of positions on the formal establishment laid down by the Civil Service Commission, none of the changes effected involving a senior or executive position. The difference between the number on the establishment, 701, and the staff as on March 31 is accounted for by 15 vacancies, arising chiefly out of illness, and 29 temporary employees; several temporaries are in necessary replacement of absentees and the remainder because of pressure of work in certain divisions, the employees concerned being in all cases of the lower grades.

NEW PLANT

The new plant purchased during the year included the following major items:—

<i>Composition Branch—</i>	
1 material-making machine with gas regulator and motor for Monotype Division.....	\$ 2,006 95
2 linotype machines complete with 4 moulds and 108 mould liners for Linotype Division.....	9,789 42
<i>Pressrooms—</i>	
3 Miehle vertical presses.....	10,588 00
2 automatic feeding machines.....	6,125 00
<i>Bindery—</i>	
1 rounding and backing machine.....	5,194 67
1 book backing machine.....	480 00
1 Dexter folding machine.....	8,017 00
<i>Shipping and Receiving Division—</i>	
1 utility express motor truck.....	1,980 00
1 business coupe.....	1,412 00
<i>Mechanical Division—</i>	
1 lathe.....	3,437 35

These various purchases were by way of replacement as a rule; in the case of the Shipping Division the smaller motor car was an addition to the delivery equipment, increasing the effective vehicles to five; quick deliveries being frequently needed, particularly during a session of Parliament, it was deemed more convenient as well as more economical, both as to purchase price and as to running expense, to buy a small car rather than the ordinary motor truck, of which there are four in the delivery branch. Under the practice of recent years one motor truck has been purchased in replacement each year.

Material purchased during the year amounted to \$2,477,925.27, this sum being about evenly divided between the Stationery Branch, from which supplies are drawn for the Houses of Parliament and the various Government departments, and the Printing Branch, the latter including all printing, chiefly lithographing, executed outside the Printing Bureau itself. Of the total amount the greater part, namely, \$2,426,292.68, was purchased in Canada. It should be stated here that the general principle pursued with respect to purchases is to buy goods of Canadian manufacture when these are available of qualities and at prices approximately equal, and if goods of Canadian manufacture are not available then to give the same degree of preference to goods made within the British Empire.

INCREASE IN WAGE RATES

The question of an increase in the wage rate in the Printing Branch was raised at about the close of the fiscal year ended March 31, 1928. As has been pointed out in previous reports the matter is governed by section 16, paragraph 3, of the Public Printing and Stationery Act (Chapter 162, R.S.C. 1927) which provides with respect to wages of the printing classes that "no increase of any such rate of wages shall be made so as to raise the rate above that which is at the time of such increase paid for similar work in the cities of Montreal and Toronto". Careful examination of the wage rates paid in the cities of Montreal and Toronto was made and an increase of slightly over five per cent was allowed generally, bringing from \$38 to \$40 the weekly wage of the Composition, Press and Bindery Branches, with proportionate adjustments in other grades of workers. In the case of the Stereotype Branch, the wages at \$42 weekly again reached a slightly higher level than that of the other printing trades.

The attached table shows the weekly wage rates in the printing trades as paid at various periods in the Department of Public Printing and Stationery as from 1887 to the present time:—

WEEKLY RATES OF WAGES OF PRINTING TRADES FROM 1887 TO 1929

Year	Proof- readers	Copy- holders		Hand Com- positors		Linotype Operators		Mono- type Operators		Mono- type Caster Runners		Stereo- typers		Press- men		Press- feeders and Bindery Men*		Book- binders		Bindery Girls and Women Pressfeeders

*Bindery Men—New class April 1, 1927.

DEATHS, SUPERANNUATIONS, ETC.

During the year five employees, all of the mechanical division, died, and four members of the Civil Service division were superannuated under the provisions of the Civil Service Superannuation and Retirement Act, three on account of ill health and one because of age.

F. A. ACLAND,
King's Printer.

Hon. C. H. CAHAN, LL.D., K.C.,
*Secretary of State and Minister charged with the administration of
Department of Public Printing and Stationery.*

OTTAWA, CANADA,
September, 1930.

F. A. ACLAND, Esq.,
King's Printer and Controller of Stationery.

SIR,—I have the honour to submit a report of the work executed for Parliament and the various departments in the Government Printing Bureau and in commercial lithographing, engraving and printing establishments during the fiscal year ending March 31, 1930, contained in the following tabulated statements:—

1. Annual reports.
2. Supplementary reports.
3. Routine parliamentary work.
4. House of Commons and Senate Debates.
5. Statutes.
6. *Canada Gazette*.
7. Voters' lists.
8. Pamphlets and miscellaneous book-work.
9. Statement of other letterpress departmental work.
10. Statement of books bound.
11. Pads made.
12. Making and stamping of prepaid Post Office envelopes.
13. Die stamping and letter and note headings and envelopes.
14. Loose-leaf work.
15. Lithographed maps, plans, cheques and forms.
16. Half-tones, line cuts, electros and dies made.
17. Lithographing and Engraving Division—Record of Work for Fiscal Year, 1929-30.
18. Comparative statement of presswork.

Respectfully submitted,

P. M. DRAPER,
Director and Superintendent of Printing.

OTTAWA, August 5, 1930.

TABLE No. 3—Statement showing the Routine Parliamentary Work, Year 1929-30

* In this table and in other tables which contain a column giving the total number of printed pages, the figures in the total column coincide, as a rule, with those obtained by multiplying the number of copies by the number of pages. In some cases, however, a printing job includes different sections or series which vary as to the number of copies and number of pages; the two first columns do not therefore multiply into the figures shown in the column representing the total number of pages printed. Cases of this class are denoted by an asterisk (*).

ACCOUNTANT'S BRANCH

OTTAWA, August 1, 1930

F. A. ACLAND, Esq.,
King's Printer and Controller of Stationery.

SIR,—I have the honour to submit the following report of the transactions of this branch of the department for the fiscal year ending March 31, 1930. Complete details of the financial operations of the department will be found under the following heads:—

1. General Financial Statement.
2. Letter of Credit Account.
3. King's Printer Advance Account.
4. Printing Branch Account and comparative statements.
5. Stationery Branch Account and comparative statements.
6. Votes, detail of expenditure.
7. *Canada Gazette*, comparative statement of Revenue and Expenditure.
8. Casual Revenue Account.

Respectfully submitted,

F. G. BRONSKILL,
Chief Accountant.

Profit for the fiscal year 1929.....	\$		<u>32,666 54</u>

Business of this year (1929-30) was considerably in excess of that of the previous year, or of any year save during the war period. Conditions arising from increase of business were met very favourably.

Your attention is directed to the number of packages sent by mail and otherwise:—

Requisitions received.....	24,223
Letters received.....	3,569
Letters sent.....	16,329
Parcels sent by mail.....	10,694
Parcels, cases and bundles sent by Freight and Express.....	6,862

The whole respectfully submitted.

J. W. DRISCOLL,
Superintendent of Stationery.

DIVISION OF DOCUMENTS

F. A. ACLAND, Esq.,
King's Printer and Controller of Stationery.

SIR,—I have the honour to submit for your information the report of this division from April 1, 1929, to March 31, 1930.

The total sales during the fiscal year were as follows: To the Houses of Parliament and departments, \$17,144.22; to the public, \$40,892.29; a total of \$58,036.51.

During the year, 1,445 requisitions were received from departments. The total number of letters received by this division during the last fiscal year was 24,284; of these, 12,177 were requests for publications accompanied by remittance, and 9,738 other letters were answered. Shipping orders issued for the year totaled 17,905.

The activities of the departmental sub post office are shown in the statement following which contains the amount of mail matter handled:—

	1928-1929	1929-1930
Number of letters.....	157,665	191,377
Number of registered letters.....	2,556	2,782
Number of insured parcels.....	8,135	7,602
Mail bags to railway station.....	19,580	19,859
Mail bags to Post Office for final sortation.....	5,145	5,264
	<hr/> 24,725	<hr/> 25,123

The above shows an increase in the number of mail bags over previous year of 398.

The annual Catalogue of Official Publications of the Parliament and Government of Canada, with supplements at intervals, the first issue of which appeared in April, 1928, has been continued, and judging by the demand for copies is of particular service to the public.

A. L. NORMANDIN,
Chief, Division of Documents.

STATUTES OF CANADA, 1929

The table printed herewith shows the number of copies received of each publication and the general disposition of the same. Many copies of each document, sometimes practically all, are delivered direct to the ordering department; in some cases copies are requisitioned by the Clerk of the House of Commons for distribution to Members of Parliament. Often considerable numbers are mailed direct to addresses supplied by the Clerk of the House and by the department interested. Copies of all publications not confidential in character are mailed to important libraries, etc., under P.C. 1471, a regulation enacted on August 4, 1927, and operative since September 4, 1927. The system indicated applies not only in the case of annual reports but to practically all publications other than the Statutes of Canada.

REPORT OF THE CONTROLLER OF PURCHASES

FISCAL YEAR 1929-30

F. A. ACLAND,
King's Printer,
Ottawa, Ont.

DEAR SIR,—I have the honour to submit report of the Purchasing Branch for the fiscal year 1929-30. The total amount of money paid for purchases made by the three divisions of this branch is \$2,493,095.45, sub-divided as follows:—

—	Canadian	United Kingdom	United States	Other Countries	Total Material Purchased	Customs Duty and Brokerage	Grand Total
	\$ cts.	\$ cts.	\$ cts.	\$ cts.	\$ cts.	\$ cts.	\$ cts.
Stationery and Paper Stores.....	1,831,034 20	22,400 22	19,219 21	952 96	1,873,606 59	10,943 61	1,884,550 20
Printing Stores.....	136,120 73		9,047 15		145,167 88	3,802 35	148,970 23
Lithographing, Printing, Binding, Engraving, etc.....	459,137 75			13 05	459,150 80	424 22	459,575 02
Totals.....	2,426,292 68	22,400 22	28,266 36	966 01	2,477,925 27	15,170 18	2,493,095 45

For the above mentioned purchases 1,596 personal accounts were opened; 38,290 invoices were received, audited and certified ready for payment; 30,144 individual orders were issued and 950 special specifications for tenders were prepared. Sale of discarded equipment, machines, etc., amounted to \$5,225.00. Metal dross exchanged for virgin metal, 29,877 pounds to the value of \$2,987.70. Customs entries for import and export, 264; number of express and freight slips audited and cleared for payment, 2,719.

Work performed or supervised by the Lithographing and Engraving Division is as follows: Cheques lithographed, 3,827,799; maps lithographed, 1,489,950; forms, posters, etc., 14,224,941; lithographed money orders, 16,828,900; booklets, 2,004,912; printed cards, tags and labels, 9,613,766; line engravings and halftones, 12,355; electros and dies, 1,840; heliotype prints, 439,107; cartons and envelopes, 4,525,550; binding (books), 358,793; mounting maps, 4,000; pads, 188,250; calendars and tubes, 123,500; tabs and file protectors, 13,632.

GOVERNMENT NEWSPAPER ADVERTISING

The total amount of the invoices audited and passed for payment by this department for Government advertising during the fiscal year ending March 31, 1930, is \$364,436.02; the details of which are set forth in statement on the next page. These accounts were paid by the several departments for which the advertising is done and the amount is therefore not included in the statement of expenditure of this department.

The number of advertising accounts audited is 10,215; orders issued, 8,029, of which 6,334 were for transient advertising and 1,695 for space contract advertising.
